one is much stiffer than on the old one. I don't know if this is
because my T is nearly 4 years old (it starts pre-school in the fall,
BTW) or if the XT was designed with more resistance.

My 'T goes to eBay next week, too, if I don't sell it locally first.
Good radio. If you've never had one of the modern Unidens, I'm not
sure there would be much difference to you if you got the T vs the XT
- you'd be thrilled with either!

I got mine from CEI for 489.95... Shipped!

http://www.usascan.com

I have bought my last few scanners from them... They are great.

From: johnstark
Topic: 1185 Message: 1225

When they changed systems here we had similar issues. The old system is still running but unused, it's now the #2 backup. The new system is actually 2 systems with #2 being the public works and the backup for the public safety system. I-Calls are only used on system 2, the same as it was on the original trunk system

Topic: 1212 Message: 1226

Does anyone remember the case/cover that was designed for the 396T ? I think the name was likacase or something like that. I looked through all of my past links and the only one that was close was a dead. I still use it because its light weight, and thin. I know all about the nylon, and leather cases scanner master and others have but its not what I'm looking for. The current one I have is a little worn and I just wanted a new jacket for my new radio

From: leogallagher1952
Topic: 1227 Message: 1227

newbie here. I need help with finding the control frequency for:
Apache Junction, Pinal County, az. Police department.
Also please advise where I should have looked.
I think the TG is 3107 and 3108. Correct me if I am wrong.
Thanks in advance. It appears like this group is always willing to help.
I just received my BCD396xt-what a challenge.

http://www.radioreference.com/apps/db/?sid=2508

According to the notes, Apache Junction is carried on Simulcast D, so you'd use 867.75, 867.825, 868.275, and 868.35 as your system frequencies.

1230. comm failure

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-21 18:22:46 UTC
From: wb6qmp
Topic: 1230 Message: 1230

I can't get the scanner to talk to my computer.
I ordered the USB cable, installed the driver, configured the "new" comm port 3, tried differeny speeds.

I can read from the scanner but when I try to write to it, it fails with error code 438.
This happens with USB cable and the serial poet cable that came in the box.

I think its something with my computer.
Running ZoneAlarm fire wall and PC Doctor Anti-virus software, no message popup other then the Win-XP comm error.

I'm setting the scanner, bc-tools and the comm port to the same speed.

Question, do I need to check the DTR box? What about comm port settings, 8, none, and 1 stop bit?
Any ideas,
Thanks, TK
wb6qmp

This sounds like a bctool-specific error. Since you can read from the scanner you can get the scanner to talk to the computer. I'd recommend you report the specific error message and conditions on the bctool Yahoo! group (http://groups.yahoo.com/group/bctool).

Currently the only SW that works with the XT is FreeScan or ProScan. Try
one of those.

Then it's a USB<->RS-232 converter issue and not a BCD396XT issue.
Pretty common.

In free scan go to Virtual control.
On Auto it will check for the comport and baud rate.
Then exit and everything should work fine.
Either you have the wrong comport selected or the baud rate is not set to the one the software is looking for.
If this doesn't work ???

Latest version?

Make sure the speed in the scanner matches the speed in the PC.

Using the Spread sheet for the Culver City site at:
http://www.radioreference.com/apps/db/?sid=2856
I calculate the Upper as 481.1875, correct ?
If so, it doesn't track or work at all.
If I use the control freq. of 482.5625 as the upper freq. , it works
perfectly. I'm confused.
What have done wrong ?

Hello,

379 X .0125 = 4.7375 [759-380]*[Step Size]

470.0125 + 4.7375 = 474.7500 [Lower Frequency]+[Calculation from Above]

474.7500 is the Upper Frequency.

Hello,

Looking at the RRDB, I see multiple sites with different Band Plans, some with one, some with two, so the last calculation may not apply to the Site. Which Site are you trying to make the calculation for?

TIA

If you are getting error 438 on write then this indicates a problem that occured with the very first update to 0.8E that was put out. To fix it, redownload 0.8E overwriting the existing file, then uninstall FreeSCAN and reinstall and all should be well.

Hello,

Its a single Band Plan so:

480.5000 + [759-380] * .0125

480.5000 + 379 * .0125

480.5000 + 4.7375 = 485.2375

485.2375 is the Upper Frequency.

Hello,

Good to hear. It seems there is an issue with the spreadsheet from the Uniden TWiki. I opened the spreadsheet with Excel 2007 in capability mode and entered the values from the Culver City Site. The Upper Frequency calculated to 475.7375, which is wrong.

In any event, you can always do it manually with the formula provided.

I'm curious, the Upper Freq. is not needed with any previous model. Why now ?
The BCD996T also handles multi sites without it.

I have no idea what you mean by polarity. It calculates the upper frequency.

One of the options in the "Custom Band Plan" is "Polarity"

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-22 14:20:02 UTC
From: Uniden UPMan
Topic: 1230 Message: 1254

I just tried the same thing, and the frequency calculated correctly.

Here is roughly what the sheet looked like (w/o correct spacing or column headings):

Table from Radio Reference
Band Plan 1 480.5000 12.5000 380
Band Plan 2
Band Plan 3
Band Plan 4
Band Plan 5
Band Plan 6

BCD396XT Entries
Band Plan 1 480.5000 485.2375 12.5 380
Band Plan 2
Band Plan 3
Band Plan 4
Band Plan 5
Band Plan 6

This is using Excel 2002 (but there aren't any advanced features being used, so it should be fully compatible across versions).

From: Dave Landrum
Topic: 1230 Message: 1255

Hello,

When you opened the spreadsheet in Excel 2007, was it with Vista? It works fine with XP and Excel 2002. There may be some issue with my Vista Box and Excel 2007 not getting along. MS Office was pre-installed on my Vista Box.

TIA

From: Richard A. Victor
Topic: 1230 Message: 1256

Since RR specifies the Lower Base and the Step in different units,
the formula in the Wiki would be less confusing if it either
indicated that all values should be converted to MHz or if the
formula was restated as:

Base + ((759-Offset) * (Step/1000))

A corresponding change should be made in the multiple band plan formula.

I was just wondering everyone's experience with the close call function on the BCD396xt? I have not had the experience to fully test the close call function yet, but thus far I have not gotten anything on close call yet. All other functions on this radio thus far however are nearly flawless. I specially like the preemptive priority function. I am very happy I bought it indeed! :-) All comments appreciated

Have you been close to any transmitters?

Maybe LilKase? If that's it, then I believe the company has closed due to a death. Think I'm remembering this as a posting on RR.

> Does anyone remember the case/cover that was designed for the 396T ? I think the name was likacase or something like that. I looked through all of my past links and the only one that was close was a dead. I still use it because its light weight, and thin. I know all about the nylon, and leather cases scanner master and others have but its not what I'm looking for. The current one I have is a little worn and I just wanted a new jacket for my new radio

The BCD396XT is at least as sensitive as on the BCD396T, BCD996T, and BCT15. I have two of each in my den in addition the BCD396XT and they all alert about equally on CC signals. (Using an amplified, outside antenna.) I usually get 100-200 CC hits per week at home.

My feeling has been that my BCD396XT is 'slightly' more sensitive to CC hits. But that could just be more of a sample difference than that of BCD396XT's in general.

In my vehicle using a Larsen tri-band, mag-mount antenna & the BCD396XT, I get enough CC hits that it can become annoying at times. I travel about 45 minutes to work and back and I typically get 4 to 7 hits each way.

Rich

1261. Custom broadcast screen not working for me

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-23 02:06:36 UTC
From: clegg_andrew
Topic: 1261 Message: 1261

I have programmed a custom band under "broadcast screen" because the scanner stops on a lot of analog TV hash in the 470 - 512 MHz band when going through the public safety pre-programmed search. So I created a custom screen for 470 - 512 MHz, and turned it on in the broadcast screen settings, but the scanner still stops on frequencies in that range when I am doing a public safety search (or any search). Any idea what I'm doing wrong, or misunderstanding?

Thanks much,
Andy

1262. 396XT Really Worth It?

Ok,
After researching other P25 digital systems I'm interested in and/or just out of curiosity I've found that a lot of them are becoming encrypted. Now, we all know how cool this scanner is and all the bells and whistles that come with it. My question is, is this scanner really worth purchasing if the systems that are digital are just going to eventually become encrypted? Don't get me wrong...this scanner is great. Unfortunately, the whole "encryption" thing made sense after I experienced it myself. The systems I listen to are mostly aircraft and 800mhz trunking. Any ideas?

-Dan

P.S. I've only had it for a week. Return? Exchange?

First, the aircraft frequencies aren't encrypted and aren't expected
to be for the foreseeable future. The others obviously depend on
where you live and what you want to listen to. Whether it's worth
spending the money to listen to aircraft and the unencrypted
frequencies is an individual decision. It seems that you have three
choices--make the best of the situation with a scanner that has as
much capability as possible, choose a less capable scanner and be
even more limited in what you can listen to, or give up listening completely.

I've chosen to buy the most capable scanner available and to enjoy it
until such time as there isn't anything worth listening to.

I'm not sure what you mean by the encryption thing making
sense. Without debating the merits of whether agencies should or
shouldn't, the reality is that some do. I'm prepared to live with
that even though I migh wish it were different.

I have to agree with Richard. In addition they will only allow us to hear what they want us to hear on the scanners anyway. It has always been like that over the years. Before everything does go encrypted,which I don't think it will ever fully happen, let's just enjoy this wonderful hobby we have with a fine equipment after all and count our blessings everyday. In my opinion the xt is worth every penny I spent on it. I am happy with it and it is a great radio thus far in my experience! Happy scanning! :)

I think he makes a good point about everything going encrypted look at cook county illinois the sheriff has not one channel in the clear and that used to be some of the best listening until they went to a trs and complete encryption came with it but besides that the xt is a great scanner I bought two and love them but I still think he's got a point with the encryption thing.

Theres a way to stop systems from going encrypted..... you as a taxpayer can stop it! Encryption is expensive and those who want it have to get it passed to buy it. They need the keys for each and every radio and that gets expensive. Taxpayers have numerous reason to not allow a system to go encrypted and the first is EXSPENSE, I've heard numbers from $500 per radio to $3000+ per radio and that adds up quick either way and it is just reason to not allow it. So it's up to YOU the voters to take control!

As for your ? on keeping, exchanging or returning.... no one can make that descision, but systems are not going encrypted that fast, and truthfully most places CAN'T afford to go encrypted just due to the per radio cost. Our own state police system which is statewide has very very few encrypted TG's, even the #1 state police post only has 3 radios capable of encryption at this time and no plans to add more due to cutbacks. Heck the state pulled ALL of the road troopers cell phones too due to cost cutting!

Of course, then you have the situation where they go for the "cheap" systems that use proprietary encoders like they have in my county (Kenwood Nexedge). And the not so "cheap" systems like they did in my home county just south of this one (Edacs ProVoice).

Don, KE4JD
---------- Original message from "johnstark" <johnstark@...>: ----------

Theres a way to stop systems from going encrypted..... you as a taxpayer can stop it! Encryption is expensive and those who want it have to get it passed to buy it. They need the keys for each and every radio and that gets expensive. Taxpayers have numerous reason to not allow a system to go encrypted and the first is EXSPENSE, I've heard numbers from $500 per radio to $3000+ per radio and that adds up quick either way and it is just reason to not allow it. So it's up to YOU the voters to take control!

As for your ? on keeping, exchanging or returning.... no one can make that descision, but systems are not going encrypted that fast, and truthfully most places CAN'T afford to go encrypted just due to the per radio cost. Our own state police system which is statewide has very very few encrypted TG's, even the #1 state police post only has 3 radios capable of encryption at this time and no plans to add more due to cutbacks. Heck the state pulled ALL of the road troopers cell phones too due to cost cutting!

You as a taxpayer STILL have a say though, and one of the problems with EDACS is upkeep, sure it's cheap to build but it is expensive to maintain with constant failures, thats where cheap winds up costing more than say Motorola.

1270. Re: [BCD396XT] Custom broadcast screen not working for me

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-23 14:22:07 UTC
From: Uniden UPMan
Topic: 1261 Message: 1270

After you programmed the screen, did you enable it by setting the screen to "On"?
 UPMan

From: clegg_andrew <andrew_w_clegg@...>
To: BCD396XT@yahoogroups.com
Sent: Wednesday, April 22, 2009 9:06:36 PM
Subject: [BCD396XT] Custom broadcast screen not working for me

I have programmed a custom band under "broadcast screen" because the scanner stops on a lot of analog TV hash in the 470 - 512 MHz band when going through the public safety pre-programmed search. So I created a custom screen for 470 - 512 MHz, and turned it on in the broadcast screen settings, but the scanner still stops on frequencies in that range when I am doing a public safety search (or any search). Any idea what I'm doing wrong, or misunderstanding?

Thanks much,
Andy

One other thing on encryption, most of the systems that are encrypted did so using federal $$ from Homeland Security, those funds have been dispersed and are no longer available, and with Obama in office Homeland Security will have funds cut. Most municipalities and states cannot afford to go it alone so to say everything is going encrypted is completely baseless as the fact is most places can't afford it at all. Others also realize that scanner users can help public safety if they do not go encrypted. I regularly avoid traffic jams due to hearing whats going on and on more than one occasion was able to avoid areas of police activity which helps too. I also avoided a couple areas where pursuits were in progress. And on one occasion I heard a discription of a bank robber, a week later a guy matching that discription was about a mile from my home. A call to the sheriffs dept and they got the guy, it WAS him! Just a few reasons to not allow systems to go encrypted.

Ray,
1: Umm, yeah, removing the plastic definately makes a difference on the screen.....
2: You sure those are birdies and NOT interference? Big difference there, and yes, the IF shift can help!
3: Software: thats where paying attention to the posts here helps, you could use FreeScan to program the scanner, and from what I understand there were issues beyond Unidens control that delayed UASD.... no one is perfect....
4: really, scanner buyers aren't discriminating? Better rethink that one, if they weren't we'ed still be using crystal scanners and the hobby and products wouldn't have grown to what they are now. The fact is the manufactueres listen to the users and look at the capabilities we have now!
5: Yup, a desktop with the capabilities of the XT would be great, at home or in the car. I think it would sell well, the problem right now may be the economy and it may not be a good time for Uniden to come out with a new 996XT model. But if 396XT sales are good then they may, who knows, only the descision makers at Uniden can answer that.

OK, first, what does this have to do with the BCD396XT? If you're implying that the 'XT should have shipped with decryption capability ... well ... I'm at a loss for words.

As for encryption itself, if I decided not to buy any scanners the first time I heard someone tell everyone that it didn't matter "'cause everythign will be encrypted by <insert some date>!" then I'd still be using my BC100.

But I didn't, so I've had 4 hand-helds and about a half-dozen mobile units since then.

1. With respect to the arguments that the XT really doesn't improve things, I think there's a huge number of owners who feel otherwise.

2. With respect to encryption, yes, there is a loss at the margins but I think Peter has called that ball correctly.

3. In my opinion and experience, the FAR greater "threat" to scanning is not the continual change of technology that makes my older scanners obsolete, and it's not the creeping use of encryption* that my scanners will never decode, but the use of cellphones. How many times do you hear "call the Sgt. on his cell" or things like that? My answer: very, very frequently.

* One thing I've seen is that, at least here in New England, local agencies (and much of public safety is done at the town/city level) that go encrypted soon discover that there is a big disadvantage in terms of their ability (and need) to operate with other agencies, so they often (but not always) go back to txing in the clear. Even state police in this region have gone back to more use of clear tx because of their interoperability needs with local agencies.

Let's not discount the use of MDT's in the patrol cars for (private) messages that we cannot see. Some municipalities here in NJ also use Nextel for their private chats. It is dissappointing to find out as some towns switch over, ie Edison, NJ, Franklin NJ to pd encryption modes, they have keep their fire departments in the clear. I agree that the expense of an encrypted switch, especially with towns that are happy with their existing systems may delay it long enough for us scanner listeners. Right now we have plenty of sites to monitor and usually during large scale events, intercity systems can usually tip off what is happening.

Just a quick comment to those that passes on the BCD396xt.
Boy am I laughing at you.
You don't know the features you are missing from the BCD396t.
If you are smart eventually you'll find out what makes it easier to use, quicker to find anything in the massive memory than any scanner before it, and I find I'm not missing the action. I'm getting more "better calls" than I ever have. Unless of course you just sit on one channel. The more I use the radio the more impressed I am. Features that I didn't know it had. As great as the number keys are did you know if you are on a system and hit HOLD type in the talkgroup number and tap the scanner will go right to the talkgroup. Or you can hold on a talkgroup even if it is not in your scan list. Never seen so many features in a scanner and for this price. Look just at the number of channels. How many scanners would you have to buy in the past to get this many channels even without the features. Nuf said.

Aircraft likely won't go encrypted, or even digital, as it's
counter-productive to everyone being able to hear everyone else. There
is also the problem of losing the ability to hear weak signals along
with strong signals - the whole reason they use AM modulation in the
first place.

As for the PS bands, I've said before that enough pressure could get a
Federal law to prohibit encryption on dispatch frequencies - maybe on
all frequencies except IA and SWAT frequencies, and even those don't
have to be encrypted to be effective.

I think there's a lot of people that are somewhat taking what I said about the XT being worth it as an offense. I want everyone to understand I absolutely LOVE my XT. I've only had it a week but have found a lot of features I knew were out there but never used until now...a lot of that is because of ProScan and how user friendly it is to program with. I don't plan on getting rid of the radio. I just want people to do their research BEFORE they make a big purchase...especially nowadays. After hearing voice on a P25 system I was blown away at the clarity...it's a shame I can't hear the PD here....for now.

Bottom line, I'm not an XT hater. I was one of the people that jumped to buy it THEN did my research. I honestly don't regret it.

In the end, we're all friends! :-)

The problem with seeking to solve problems with legislation is that it can backfire. You might propose a law as you suggest and end up with a law requiring encryption instead. Never want to open that can of worms until you determine whether the worms are friendly.

Been there. Seen it.

Dick

Upman:

When can we expect the firmware upgrade for the RH-96 Remote Head to allow it to work with the XT?

Thanks very much,

Rick

The really short answer (back to your original question) is yes, even though spendy, it's worth it. I was deeply in doubt when I bought mine. It took only a day for my doubts to vanish. Now I just need to learn how to use all of its many features, but even without being an XT-meister, it's a fabulous radio.

Footnote to the discussion about encryption and interoperability. This issue is real enough, at least around here, that most of the (few) cities that have trunked systems run a conventional simulcast, so if I struck just a couple of agencies off my list I could use a scanner that didn't even trunk and miss relatively little!

1287. BC-RH96 Update for new models

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-23 18:49:07 UTC
From: uniden.upman
Topic: 1287 Message: 1287

I approved a message several hours ago that still hasn't made it to the list. ??

Anyway, the person was asking when the update for the Remote Head would be available to support the new models. The answer is:

April 9, 2009

<http://info.uniden.com/twiki/bin/view/UnidenMan4/WhatsNew>

1288. Re: 396XT Really Worth It?

Yahoo group: BCD396XT (2008 — 2010)

From: shelleysh1@att.net
Topic: 1262 Message: 1288

Hi Dan,

If the systems you're listening to right now aren't encrypted, the chances of the entire system going encrypted may be unlikely. Encryption takes a big chunk out of the strength of digital system. What most do is to designate only certain talkgroups i.e. drug enforcement, undercover ops, or similar, the ability to switch to encryption when necessary. (I'm speaking particularly of Moto systems right now because that's what I'm familiar with.) Unless the digital system was designed origially with the capability for the entire system to operate encrypted, most likely they aren't setup for it now and it's an expensive upgrade for them to make which most cities, counties, etc. aren't going to be doing in the foreseeable future. Again, this is just my experience with the Motorola systems.

Shelley

Now, we all know how cool this scanner is and all the bells and whistles that come with it. My question is, is this scanner really worth purchasing if the systems that are digital are just going to eventually become encrypted? Don't get me wrong...this scanner is great. Unfortunately, the whole "encryption" thing made sense after I experienced it myself. The systems I listen to are mostly aircraft and 800mhz trunking. Any ideas?

Subject: Re: [BCD396XT] really

Let's not discount the use of MDT's in the patrol cars for (private) messages that we cannot see. Some municipalities here in NJ also use Nextel for their private chats. It is dissappointing to find out as some towns switch over, ie Edison, NJ, Franklin NJ to pd encryption modes, they have keep their fire departments in the clear. I agree that the expense of an encrypted switch, especially with towns that are happy with their existing systems may delay it long enough for us scanner listeners. Right now we have plenty of sites to monitor and usually during large scale events, intercity systems can usually tip off what is happening.

1. With respect to the arguments that the XT really doesn't improve things, I think there's a huge number of owners who feel otherwise.

2. With respect to encryption, yes, there is a loss at the margins but I think Peter has called that ball correctly.

3. In my opinion and experience, the FAR greater "threat" to scanning is not the continual change of technology that makes my older scanners obsolete, and it's not the creeping use of encryption* that my scanners will never decode, but the use of cellphones. How many times do you hear "call the Sgt. on his cell" or things like that? My answer: very, very frequently.

* One thing I've seen is that, at least here in New England, local agencies (and much of public safety is done at the town/city level) that go encrypted soon discover that there is a big disadvantage in terms of their ability (and need) to operate with other agencies, so they often (but not always) go back to txing in the clear. Even state police in this region have gone back to more use of clear tx because of their interoperability needs with local

agencies.

With the computer cable that came with the BC396xt it does.
Unfortunately at this time Unitrunker doesn't.
But the Unitrunker people are working on it and shortly you will be able to use your BC346xt or BCD396xt with Unitrunker. Can't wait. I'm still using a BC245 with a discriminator tap. This is one of the features I was pushing for on the new scanners.

Question about the WX alert. When I have the WX alert set to "ON" and I go back the "scan" mode the WX symbol shows up in the lower right corner. That's how I know it's on. I'm noticing the I'm losing signal for whatever I'm scanning for a few moments every few seconds. Is this happening because it's temporarily switching into "WX" mode to check for a message?

When I read your original post, I didn't take it as purposefully being inflammatory at all, but rather just pointing out some things to think about. However, I'm not so sure about your remark regarding us gals:-)

But to comment on encryption, here in Houston most transmissions are in the clear, although there is enough encryption on some sysems/channels to make listening on a Radio Shack or GRE receiver quite painful (you hear all the noise), unlike on the Uniden 996 where listening is a pleasure. I can hardly wait to clear out my shack a little and buy at 396XT! I really appreciate all the info on this list about this new radio.

This whole 'worth it' issue is relative. To some who need multi-site trunking, that feature alone is worth it. To some who need FTO decode, it is worth it. You can say the same for every single new feature.

BUT, for someone who doesn't need any of these features or even digital capability, none of the digital scanners are really 'worth it' compared to the analog counterparts that exist or will soon exist and have all the same features minus digital.

Joe M.

J. Newell wrote:
>
> The really short answer (back to your original question) is yes, even though spendy, it's worth it. I was deeply in doubt when I bought mine. It took only a day for my doubts to vanish. Now I just need to learn how to use all of its many features, but even without being an XT-meister, it's a fabulous radio.
>
>
>
> Footnote to the discussion about encryption and interoperability. This issue is real enough, at least around here, that most of the (few) cities that have trunked systems run a conventional simulcast, so if I struck just a couple of agencies off my list I could use a scanner that didn't even trunk and miss relatively little!

No it does not.

It comes with a built-in slicer for a couple of digital modes (P16 and P25), but it does not output the discriminator audio and does not support any of the dozens of other possible uses for the tap.

From: MCH
Topic: 1290 Message: 1302

It does not have a tap. You would have to install one.

Some modes are supported by the internal slicer - specifically P16 and P25. I understand Unitrunker will support those in the future, but does not yet. PRO96COM supports P25 now, and will support P16 sometime in the future. In both cases, the author does not have the necessary equipment or systems in their respective areas to work on them.

From: Brian
Topic: 1293 Message: 1304

I took the plunge and decided to give the 396XT a try. I was a little shy after some negative outcomes upping to firmware version 3.0 on the 396T. I have had very little time to work with the XT but I have to agree with Ron. This XT is an even scale with the GRE500. In terms of digi decode on Illinois statewide STARCOM21 system, the 2 scanners are literally in synch. Audio is now excellent. Easy to use and program. Much more to test and report on but I am extremely satisfied. Thanks to Mr. opitz and Uniden for producing a very fine product with this model. Time to crack my knuckles and get back to manually programming here!

1306. Re: 396XT Really Worth It?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-24 04:18:06 UTC
From: kayi4cle
Topic: 1262 Message: 1306

At the risk of embarrassing myself, would you please tell me what FTO decode is. (I couldn't find it online.)

Does it mean that you can turn the knob and scroll through all that's on the radio and hear whatever freq. or ID that you twist it to (like the 246 and 996)? I'm wrong, aren't I?

Thanks so much!

1308. Re: [BCD396XT] Discriminator tap.

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-24 02:44:49 UTC
From: Thomas Staley Jr.
Topic: 1290 Message: 1308

Is it a discriminator tap or the data already decoded?

JAN FINE wrote:
> With the computer cable that came with the BC396xt it does.
> Unfortunately at this time Unitrunker doesn't.
> But the Unitrunker people are working on it and shortly you will be able to use your BC346xt or BCD396xt with Unitrunker. Can't wait. I'm still using a BC245 with a discriminator tap. This is one of the features I was pushing for on the new scanners.

Topic: 1295 Message: 1309

Specifically, what it is looking for is the 8-second long 1050 Hz alert tone that comes with weather alerts on the weather channels. That's what it's doing during that gap.

I only use it when I'm particularly concerned about severe weather.

Joe M.

Sorry, I missed that this was a service search. Because service searches actually scan discretely programmed frequencies the screens do not apply to them.

To: BCD396XT@yahoogroup s.com
Sent: Wednesday, April 22, 2009 9:06:36 PM
Subject: [BCD396XT] Custom broadcast screen not working for me

I have programmed a custom band under "broadcast screen" because the scanner stops on a lot of analog TV hash in the 470 - 512 MHz band when going through the public safety pre-programmed search. So I created a custom screen for 470 - 512 MHz, and turned it on in the broadcast screen settings, but the scanner still stops on frequencies in that range when I am doing a public safety search (or any search). Any idea what I'm doing wrong, or misunderstanding?

Thanks much,
Andy

From: shelleysh1@att.net
Topic: 1262 Message: 1317

Haha Kay,
I did a little double-take at that myself and then thought it was very funny! *grin* But after over 35 years in scanning, I'm used finding guys, at times, who are surprised we're as involved as they are (or even moreso!) in scanning. LOL

Hurry up and thin out your shack! The 396XT is excellent! I have two of them - one here at the house and one setup in the car. It's heads above the 396T - you'll love it.

Shelley

They could have delayed the release until the UASD was ready..... but they
didn't, and since there is software available I think it was a smart move to
release the scanner and then the UASD when it's ready.

FreeScan or ProScan are the only choices currently.

UASD has, in the past, was fine for many people but has never been my program of choice, so I wasn't upset it wasn't available yet. What IS available and works is FreeSCAN. It interfaces with RR and saved me a ton of time! Just thought I'd mention it...not plugging the software, just mentioning that it works, it's available and a whole lot better than manual programming.

Nothing wrong with females having scanners, my moms had one since the very first scanners hit the market. I guess the fact her father had a radio/TV repair shop helped a bit and they used ham radios before scanners to listen in on the police/fire in Denver and Colorado Springs. She still has them today..... 1 in the kitchen, 1 in the livingroom and one in the bedroom..... she's planning on adding a couple more too.

Can you imagine the outrage if the scanner still wasn't released yet?

Yes, VERY smart move to not hold up the scanner simply due to an
accessory which, as convenient as it is, is truly not necessary for
operation of the scanner.

1323. 396XT exteranl speaker volume issue

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-24 20:52:52 UTC
From: Rick Short
Topic: 1323 Message: 1323

Hello to the group:

I had a plain 396 that worked fine with a RH-96 remote head. Upgraded to the XT, love it. Did the firmware update to the RH-96 remote head, no problem with update and XT hooked right up. My issue is the plain 396 had loud volume through an external speakere plugged into the earphone jack up top. With the external speaker plugged into the XT jack, I can hardly tell any difference. On full volume the external speaker is not helping. I need this due to the mounting location of the radio away from my mobile console and using the remote head. Any ideas or suggestions.

Thanks in advance,

Rick

If it's a regular speaker (not amplified), then both should have had low audio. It's possible the 396T was modified. The earphone jack is not a speaker jack and was not designed to be used with a regular speaker.

Can you imagine the outrage if the scanner was released and FreeScan and ProScan hadn't made software available for programming it? I'd not want to work the customer service lines at Uniden. As it is, there must be a lot of people out there that don't hang around groups like this and that don't know about FreeScan and ProScan. They must be real happy right now.

I have great appreciation for the job that Uniden did on this scanner, but am unable to understand why they couldn't have software available for those that want to use their software. It's not like the release of the XT was a surprise to them and they already had software that worked for the T.

Thanks for the reply, the T was not modified, I bought it new. Am I able to use an amplified speaker on the XT?

Thanks, Rick

I noticed the same thing. I would have the volume around 10 on my
396T. I have it maxed out on the XT and it still doesn't seem loud
enough at times, or just about makes it.

MCH wrote:
> If it's a regular speaker (not amplified), then both should have had low

>> I had a plain 396 that worked fine with a RH-96 remote head. Upgraded to the XT, love it. Did the firmware update to the RH-96 remote head, no problem with update and XT hooked right up. My issue is the plain 396 had loud volume through an external speakere plugged into the earphone jack up top. With the external speaker plugged into the XT jack, I can hardly tell any difference. On full volume the external speaker is not helping. I need this due to the mounting location of the radio away from my mobile console and using the remote head. Any ideas or suggestions.

Charles:

You're free to do what you wish, but I would hate to see you base your decision on the whining from one person. If you were following the other messages today, you'd see that there at least two viable software programs for use with this scanner. So what if they didn't come from Uniden? According to reports from other users, they work, and they work today.

Topic: 1268 Message: 1338

And the people who purchased the scanner DO have the scanner and access
to the manual (which is not uncommon to be on media other than paper
these days).

You're coming very close to trashing Uniden which will not be tolerated.
If you have comments on how you feel they should have the SW available
and a printed manual, fine, but don't sling mud with comments like "but
they do have your money" - making it sound like that's all Uniden cares
about. If they only cared about money, they would not allow Paul to be
on these boards making direct contact with all of us.

I don't see why not... you're simply amplifying low level audio. Be careful about isolation - making sure you're not putting voltage into the scanner. I'm not sure if the scanner has any voltage protection or not. Ideally, both the scanner and speaker would provide isolation.

Not only that but unlike the commercial radios (e.g. motorola) it is user programmble from the key pad. Knowing HOW to program it in the 'field', on a trip or vacation, where you may not have access to a computer DOES come in handy.

Why is the fact that the available SW is not made by Uniden equal to no software being available at all? There is FreeScan and ProScan that both work with the XT.

I agree that the SW should have been released with the scanner, and I would prefer to use the UASD, but there are viable alternatives.

And what other 'stuff' makes it of no use to you?

Why do I continually come back to the analogy that some people would
complain because the wine that was just bottled doesn't taste 'finished'
yet???

Facts are if you want something that has all the kinks worked out, wait
a few months before you purchase it. That doesn't just apply to scanners
- it applies to just about anything. While the XT seems to be fairly
bug-free, I'm sure there are some that have not been discovered yet.
Still, it says that they are pretty deep and minor if they haven't been
found after a month's worth of consumer use.

1343. RE: [BCD396XT] 396XT exteranl speaker volume issue

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-24 23:33:48 UTC
From: Dewey
Topic: 1323 Message: 1343

While I agree with the "generalness" of the statement about the earphone jack not being meant to drive a speaker, there is what I would consider to be an exception. I've always liked, and still sometimes use the old RS "Lapel Speaker". I think you would agree Joe that while the lapel speaker is an external speaker by definition, the power needed to drive it shouldn't but much different than the power needed to drive the internal speaker. With the audio limiting design of today's scanner earphone jacks, the lapel speaker no longer gives the sometimes wanted boost at outdoor events. However, I do understand the lesser of the two evils... limit the power, or face a possible hearing damage lawsuit. Danger Will Robinson, don't drive with hot coffee in lap :)

Subject: Re: [BCD396XT] 396XT exteranl speaker volume issue

If it's a regular speaker (not amplified), then both should have had low audio. It's possible the 396T was modified. The earphone jack is not a speaker jack and was not designed to be used with a regular speaker.

> I had a plain 396 that worked fine with a RH-96 remote head. Upgraded to the XT, love it. Did the firmware update to the RH-96 remote head, no problem with update and XT hooked right up. My issue is the plain 396 had loud volume through an external speakere plugged into the earphone jack up top. With the external speaker plugged into the XT jack, I can hardly tell any difference. On full volume the external speaker is not helping. I need this due to the mounting location of the radio away from my mobile console and using the remote head. Any ideas or suggestions.

Funny you should mention that. I've gotten MOTOROLA radios that are ONLY software programmable, and the SW wasn't yet ready for them! In that case, I had no choice but to wait for it and let the radios sit.

Sometimes, when you deal with deadlines planned to the DAY, delays can really throw a wrench into the works. I suspect something like that happened with Uniden, and most likely in the Motorola case.

To compound that, several times Motorola has shipped radios that the existing SW version does NOT WORK on. The firmware simply says "Radio to new for this application" and you have to wait for the SW revision to catch up. At least Uniden's SW (well, everyone's scanner SW) works with all versions of firmware.

True, but the lapel speaker is not designed for audio levels most
speakers are, either. It's designed to be 'mounted' close to the ear.

Certainly you can understand how Uniden would not want to be on the
receiving end of a 'Stella' type lawsuit, and I'm sure that's why the
audio at the jack is limited. After all, they could have provided the
same level as exists at the speaker. But, it would cost them dearly in
court.

No secrets amongst friends there John, so "No" I don't have one, still thinking about it, I doubt most on this list has one. I do have the 396t and the 996t, and a Psr500 and a Psr 600, no manual for the PSR's either I might add, but there pretty awesome anyway, and so is the 396XT by the sound of it, just can't see the value in selling the T at a loss and buying the xt. Is it all done by firmware? Other then the memory of course, then I'm not sure about that either.

With respect to your point below, Joe, I think it's worth noting that Uniden appears to have released a product with virtually no bugs, which is remarkable. I wish amatuer radio companies could do as well. I don't think I've seen any user complaints about things that don't work right. Complaints about the manual, lack of software, and how some of the radios features work - yes. But bugs - no. And that's quite an achievement, especially when you consider the improvements in things like audio, sensitivity, digital decode, etc.

John

Why do I continually come back to the analogy that some people would
complain because the wine that was just bottled doesn't taste 'finished'
yet???

Facts are if you want something that has all the kinks worked out, wait
a few months before you purchase it. That doesn't just apply to scanners
- it applies to just about anything. While the XT seems to be fairly
bug-free, I'm sure there are some that have not been discovered yet.
Still, it says that they are pretty deep and minor if they haven't been
found after a month's worth of consumer use.

The cost of upgrading is not trivial. The only thing I can say is that at least for most of us, it's a hobby (or something like that). I'd hate to be making budget decisions at the state or local level these days. So many new super-products, and so little cash. :-(I'd add that while product life cycles have shortened and costs have significantly increased, the gains are in most cases only incremental and disproportionate.

Actually, here's a question that probably should be a different thread. Why are the digital scanners 2x or more the price of analog scanners? Can it really be that the technology inside is that much more expensive to design and produce, or is it just what the market will bear??? (I am not trolling, this is a serious question.)

Hi John!

No, of course there isn't anything wrong with it. We're just a bit few and far between...but maybe not that so much as not speaking up often on lists, etc.

That's great about your mom! Are you gonna get her an XT? *grin*

1354. Re: [BCD396XT] I passed on the 396XT

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-25 01:06:20 UTC
From: Rich Carlson
Topic: 1268 Message: 1354

The basic answer depends on what your status is:

If you already have a 396T (or a PSR500/Pro106 or any other radio that serves your needs now) ask yourself if the added features of the 396XT are worth the $500 (minus whatever you could sell your old radio for if you do). For me, it was, if only for the Fire Tone Out Search. I could have had that for half the price with a 346XT, (Actually I did since I have both...). Kind of like if you have a 3 year old car, do you want to replace it with the same model but a few years newer wih a few more features?

If you are new to this level of radio then you just need to decide if the 396XT is the right radio or perhaps the GRE is right for you. Kind of like "Do I buy a Ford or a Chevy?" Alternately you could look for a deal on a NOS 396T or snap up one of the dozens of used ones suddenly on the market.

Look at the features, check the specs, read reviews and opinions and then make a decision on which radio(s) is/are right for YOU and make it happen. I happen to own both the 396T and XT as well as a Pro106 and a bunch of others, I love the XT, especially for the FTO Search and a few other features. I would have preferred that ARC be ready for it already as that is my software of choice (another line of personal preferences...) but I have been hand programming it so far. Luckily I have a good idea who the users of specific talkgroups are so I don't need to have a lot of text tags yet, but when ARC-XT is ready (in a week or so I have heard) I will go to town with it!

Happy Scanning!

I have read that the royalty costs for the vocoders cause the digital
radio so be so much more expensive.

Hmmm... they put it out there with no way to program it???

Exactly how long was it that FreeScan was working post-release? I don't think it was even days... or hours. Heck, it's only been four weeks as it is. It's not as if it was put out there with nothing. Even so, why do you have to have your scanner fully-loaded from day one?

Again, if you want all the kinks worked out, don't be the first one in line to purchase one.

Maybe I should complain because there was nothing in my area (within 60 miles or so) pre-programmed. What a rip! What a bad design! Oh, wait - it only took me a few minutes to have it up and running on my local TRS. Well, still,. that's a few minutes I should not have had to use! I want it now, now, now!!! ;->

You want a printed manual? Print it out like someone else I know did. The bit-based manual works fine for me, and it pacifies the eco-nuts.

In large part due to the licensing of the P25 vocoder from DVSI. It's in
the three-figure range, and that's not counting any of the hardware.
Yes, for every digital scanner sold, over $100 goes to DVSI, NOT Uniden
and not any dealer.

You know, I forgot to mention...Uniden HAS included a CD - something they HAVE NOT done in the past. On it is the pdf manual and several very good graphic explanations of what this excellent radio can do...step-by-step! (Looks to me as if our tireless UPMAN produced these tutorials - I'd be very surprised if he didn't.) I believe the CD is an asset to the radio! And I would think most people will agree with me when I say that Uniden's manual, just like most all the others, is difficult to wade through, at best. Not criticizing - it's just that our radios are quite complex now and even the best of us will take a little while learning some of the new capabilities at times. This CD is quite nice! And definitely an added bonus. So criticism for the lack of a manual is moot, IMHO - it is included, it's on the CD! That and more - this is a perk, not something forgotten!

1360. Re: [BCD396XT] I passed on the 396XT

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-25 02:38:15 UTC
From: Richard A. Victor
Topic: 1268 Message: 1360

I knew about the software prior to buying the scanner and I'm fine with FreeScan and ProScan. As far as the manual, I don't have a problem with it being on a CD and/or the Internet. I do have a problem with the fact that the content of the manual is very difficult to work with (I'm being charitable in that description).

In my work I've operated on the belief that one must draft with sufficient clarity not only that someone reading in good faith can understand, but that someone reading in bad fairth can not misunderstand. I don't expect that in a scanner manual, but some degree of clarity would be helpful and I find that lacking.

Fortunately, since my retirement, I've had lots of time to read the forums, email lists, documentation, and to experiment. Not everyone has that amount of time nor wants to go to that much trouble. I think there will be people that give up and just return the scanner to their dealers or that fail to get anywhere near full enjoyment out of it because of the lack of a workable manual.

UASD has, in the past, was fine for many people but has never been my program of choice, so I wasn't upset it wasn't available yet. What IS available and works is FreeSCAN. It interfaces with RR and saved me a ton of time! Just thought I'd mention it...not plugging the software, just mentioning that it works, it's available and a whole lot better than manual programming.

From: Richard A. Victor
Topic: 1323 Message: 1362

I found that when I amplified or recorded the audio by feeding it
through my computer, there was an annoying popping sound at the
beginning and end of each transmission. I saw a few others had the
same problem. I found a solution to this problem based on some help
from others. See the following thread if you run into the problem.

http://www.radioreference.com/forums/uniden-scanners/141725-bcd396xt-audio-popping-solved.
html

Maybe one bug but that could actually be system related .... ie: the first part of a conversation chopped, but otherwise I think thats it, and that is pretty good off the bat.

With respect to your point below, Joe, I think it's worth noting that Uniden appears to have released a product with virtually no bugs, which is remarkable. I wish amatuer radio companies could do as well. I don't think I've seen any user complaints about things that don't work right. Complaints about the manual, lack of software, and how some of the radios features work - yes. But bugs - no. And that's quite an achievement, especially when you consider the improvements in things like audio, sensitivity, digital decode, etc.

Why do I continually come back to the analogy that some people would complain because the wine that was just bottled doesn't taste 'finished' yet???

Facts are if you want something that has all the kinks worked out, wait a few months before you purchase it. That doesn't just apply to scanners - it applies to just about anything. While the XT seems to be fairly bug-free, I'm sure there are some that have not been discovered yet. Still, it says that they are pretty deep and minor if they haven't been found after a month's worth of consumer use.

Nope, not all firmware Mel, besides memory I imagine the led's changed as
well as many other things such as circuitry for FTO decode and possibly even
a CPU change.

naw, theres no digital in her part of the Iowa corn fields :) although I think my girlfriends been hinting she wants one, she keeps leaving the house with the 396T but doesn't realize I switched the batteries and it only lasts an hour and dies. No biggy, she's usually asleep within an hour of leaving my place..... something about 10pm and it's lights out for her!

Oh I forgot to add, maybe most of the features in the xt could be in the 396t with a firmware update, probably not going to happen though. Remember the big thing about the ESN that we had to have in order to get further updates, maybe that was not about that, maybe that was about preventing us from using the XT firmware in our 396Ts.
If you don't have a 396T or a digital scanner at all, the XT is the way to go, but if you have a 396t, I can't see the value in selling it at a loss to get the xt (just my opinion)

Mel
Don't bother with the (well you can't get more memory with firmware)

That's all I want too Richard, but I just want it on paper, Trees are trees they are renewable. like how many trees does it take to print billions of dollars to bail out wall street and banks etc, does anybody care about that..... Yikes!!!! sorry got off topic there for a bit.

It's been said a thousand times that there are TWO programs you can use to program the XT, whats so difficult to understand here, OK, they are not UASD, but then even if it were UASD I'm guessing it's going to completely different from the former version for the T.
To be honest I don't see why you don't give the other two programs a shot, FreeScan will even convert your T file to work in the XT with no hassels (or even your 996T file)..... now there is a win win! Oh, and it costs the same as UASD......

thanks

im still trying to find a way to market thde 396t and sell it then get hte 100 bucks for the xt

i just dont want to reprogram it all by hand as i only have uasd now

UASD has, in the past, was fine for many people but has never been my program of choice, so I wasn't upset it wasn't available yet. What IS available and works is FreeSCAN. It interfaces with RR and saved me a ton of time! Just thought I'd mention it...not plugging the software, just mentioning that it works, it's available and a whole lot better than manual programming.

If they are so renewable why are the rainforests disappearing?

BTW, money is printed on a thin cotton blend, not on paper. That's why
it doesn't get dog-eared like paper does.

That said, if you really want a printed manual, print it out or take it
somewhere to have it printed out. It's not as if anyone is prohibiting
you from having a printed manual.

Hi Mel,

You've seen me on the 396T list for quite a while and also know that I have the 996 (which, unfortunately I never cared much for). I've always been straight about how I use and feel about my radios. Have had Bearcats, now Uniden/Bearcats since the beginning and a number of the Pro scanners too. Even have a Psr500 but was not enamored with how it's setup, so I spent most of my time with the 396T UNTIL the XT came out and Mel, I've got to tell you - this radio is flat awesome...right out of the box! I haven't said that about any manufacturer's radio in a long time and, frankly, I'm hard to please. I'm picky! I don't like bugs and workarounds. I don't like sluggish responses and I don't like radios that are difficult to program manually or by computer. Uniden has been listening to us for a while now (very refreshing!) and the 396XT is very much the culmination of that. It's clean, it works and and it really is that much better than the T. I totally understand how people don't want to take a loss on their 396Ts! Personally, I have uses for my two 396Ts - I gave them to my sons. But I'm quite serious about the XT - it is, again, the first Uniden I've taken out of the box that I've been totally impressed with - since the first programmable Bearcat. And that's saying a lot from me. (FWIW)

Because they aren't being replanted, that's why. The trees of the rain forests *aren't* being taken to make paper. Educate yourself on the subject. And saving trees *isn't* even a consideration in the "manual-less" BCD396XT.

Eric and Mel, yes, trees are renewable..... but not useful for 20 or so years down the road of time and in that time they are cutting down 4 times what they can regrow. so you have 4 trees coming down for every tree that gets planted, also don'r forget where the oxygen you breath comes from....trees among other growing leafy things.
As for the rainforest, those trees are indeed used for paper and lumber, moreso lumber. In fact I know a guy whose entire home is built with rainforest cut trees. He had his own lumber mill so it was easy for him to cut them as needed. He had the trees shipped by rail right to his mill.
You need to see the whole picture though, it isn't just the trees being cut, it's also where the manuals end up eventually... the dump where they rot for years. Now enough about the manual Mel, either get over it or go get one printed yourself, we have better things to than hear you constantly bashing Uniden for not having printed manuals or THINKING that all these changes from the T to the XT could have been done with firmware updates for the T, if they could have done they would have.....now on to the next subject.

John

Funny. I always knew paper to come from trees, and whether any rainforest trees are used in paper making or not, the fact that others are used to make paper mean more are needed for other needs, so it is all related, and diminished need for trees from other places equals diminished need from rainforest trees.

I believe my education on the matter is sound, and anyone who thinks trees aren't used to make paper needs the education.

It's the 'my use cannot make a difference' or 'I don't use THAT much' mentality that is the root cause of the problem. A little savings from everyone adds up to a big difference.

Save the trees - make the electrons do the work. They like it.

The environmental cost should be zero since CD-ROMs can be (and SHOULD
be) *recycled* into other things, or even into new CD-ROMs.

It's 20th century thinking that everything has to go to a landfill.

Get with the times. Paper is out for mass-distribution of data. Soda
doesn't come in glass bottles anymore. People don't live in caves
anymore. People don't even use money as much as they used to. Did you
purchase your scanner from a local dealer (or in your case will you) or
did/will you purchase it mail-order - perhaps even online?

Last, we aren't writing these posts on paper - email is a much more
environmentally friendly medium. Electrons love to do work - it makes
them happy. They love moving around.

What is the environmental cost of making a cdrom? How long will a cdrom
take to rot? Your just talking to hear yourself.

The environmental cost should be zero since CD-ROMs can be (and SHOULD
be) *recycled* into other things, or even into new CD-ROMs.

It's 20th century thinking that everything has to go to a landfill.

Get with the times. Paper is out for mass-distribution of data. Soda
doesn't come in glass bottles anymore. People don't live in caves
anymore. People don't even use money as much as they used to. Did you
purchase your scanner from a local dealer (or in your case will you) or
did/will you purchase it mail-order - perhaps even online?

Last, we aren't writing these posts on paper - email is a much more
environmentally friendly medium. Electrons love to do work - it makes
them happy. They love moving around.

Good grief .

Joe [MCH]: you let these trolls bait you.

Please kill this thread or take the discussion to some other group where the rest of us, who want to learn about this radio or want to help other folks use their radio, won't have to put up with the drivel.

And shame on all of you for not trimming your posts of the garbage that Yahoo adds.

Dan, I agree with you 100%. There are a couple of threads on here that are out of control. For the last few days, my phone has been alerting me off the hook to these posts by people who are not interested in sharing information about this fine radio, only whining about this or that which is completely beyond their control. I am about to stop them from coming to my phone.

* Software is available to program this radio. Period. Anyone see GRE publishing a fully functional software package? Anyone who did their due-diligence prior to purchasing this radio would have known about the lack of UASD for this radio, and the available packages out there.

* Uniden has recognized that user manuals can be more productive as evolving electronic documents. They have a limited ability to be printed, if you want.

As Dan said, go make a 396XT-Wasteland group or something. These discussions are completely non-productive.

Kevin

Well, I guess the rest of us will have to work even harder if you're not going to do your part. Maybe Uniden will have to cut out the other paper inserts next.

That said, this thread has strayed enough OT that it should either end or get back on-topic, and as the issue of paper manuals has been hashed to death, I'm all for the ending option.

I wonder if others are also noticing the first part of conversations being chopped off. The reason I ask is that it happens with my 246 and 996 on trunked systems. It wouldn't keep me from buying a 396XT, but it's something I'm interested in, and I only recently discovered the 996 was doing it on digital systems after I got a 106.

Hahaa John! Good use of batteries - or rather, good way to use the ones which will need recharging soon! (Assuming you're using rechargable. Then again, I think most all of us are, aren't we?)

One of these days digital may even arrive in the areas surrounding the Iowa cornfield (heaven forbid!). Then you can pass on one of those digital scanners sitting in front of you to your Mom...already programmed just for her, of course! Hehee

Shelley ;)

Nobody said a word about lumber. I only said that they weren't being cut down for paper. The Uniden manual (or lack of) is not in response to rain forest destruction.

Rain forest trees are the subject. And in large part, they are not.

So should paper manuals.

I have two refuge bins - a blue one for recyclable material, and a gray one for material going to the dump. I fill the blue one up every week. The gray one goes out once a month.

Back on the subject, which is the BCD396XT. I didn't pass on it and everyday appreciate what a great scanner it is.

I'm mainly a lurker here but owned a T since '05 and an XT for 2 weeks now (to say nothing of other Bearcats and others for over 25 years). I too was disappointed (and found it odd) that UASD wasn't available yet. However, I've since installed FreeScan and like it as well, and in some ways better. When UASD for XT is available it's entirely possible that I won't go back to it.

Among other things, being able to import from RR for nothing more than the cost of my existing membership is awesome. I wish I could have all the hours back that I spent manually typing frequencies and talkgroups into my T when I first got it.

I agree with everything you said Mike.
I just want to add that even though Freescan is good don't forget to try Proscan. It does recording and logging that no other program that I've owned will do. Between the 2 I'm very happy with current software.

Sorry, I did not read the posts here for a while. Last time I checked my understanding was that there is NO manual we can print (the reference guide or the web wiki is not really a manual as we discussed before). Is there now one? Where?

The user guide is what's needed to use the 396xt.
What else do you want?

bcTool does not yet work with the XT. I read that the author is planning on rewriting bcTool and will add support for the new Uniden models at that time. So I do not expect bcTool to be available anytime soon.

It has been available from the beginning. Since before the beginning, actually. It is o n the CD that comes with every scanner and was on the Uniden website before the scanner was started shipping.

Of course: I need the users guide. Did you get one in PDF or paper form?

All I found is a Wiki (really difficult to print) and a reference guide (which is not a users guide).

Where did you get a users guide from? Is it PDF? Could you please post it here?

Well, you didn't specify just XT programs. You said "It does recording and logging that no other program that I've owned will do.", and I was just curious if one of those you've owned was bcTool, as it has outstanding logging and recording. In fact, I would say it's the best I've tried, although I haven't tried ProScan. I've tried just about everything else, but bcTool is the most reliable and compact I've found. That is compact as in not hogging disc space for the recordings.

1403. GPS Feature

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-27 05:49:01 UTC
From: tuckyguy
Topic: 1194 Message: 1403

I am a fairly inexperienced user compared to the experts I see here.
I have seen no discussion in regards to using the GPS.
I am excited to have the BCD396XT, and know I have a lot to learn. I have had pretty good success programming it using a few different applications I have downloaded. I believe I have even been able to determine GPS coordinates and have them entered. I am waiting for a compatible GPS device to become available soon.
Can someone advise what GPS receivers are compatible with the BCD396XT?
I am interested in hearing from those more familiar in this area who may be able to throw in their 2 cents with hints, tips, etc.

Thanks,
tuckyguy

General information about compatible GPS units can be found here:
http://info.uniden.com/twiki/bin/view/UnidenMan4/ConnectingAGpsReceiver

Some units that have been found to be compatible are listed here:
http://wiki.radioreference.com/index.php/Location_Based_Scanning#Compatible_GPS_receivers

1406. Good RF performance, but dim display

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-27 14:59:03 UTC
From: martinezjohnnie
Topic: 1406 Message: 1406

Hello,

I've had my 396XT for nearly a week now, and I'm very impressed with its overall RF performance compared to my early production model 396T.

My only complaint at the moment is that my 396XT's display is considerably dimmer and has less contrast than my 396T's display.

I've tried increasing the contrast setting, but all that does is make the entire display go darker as I move it above the level-eight factory setting. Rather than increase the contrast between the lettering and the background, the higher contrast settings make all the pixels darker (including those in the background outside the lettering).

As a result, the only background colors that work well are the "clear" and yellow settings. The red and blue settings are a little too dark and too dim to do anything but make it more difficult to read the display in anything but very dark ambient light.

Is anyone else experiencing this? It's not a show-stopper, but it is an annoyance. I'm wondering if this is a Uniden decision designed to conserve battery power.

-Johnnie

Topic: 1406 Message: 1407

Interesting that you say it's harder to read than your 396T "classic" model. I find it to be about the same except better on the brighter colors. The blue on the XT is darker than the 396 classic. The only complaint I've read so far is that the contrast at an angle looking down at the radio from above is hard to read. Many users mentioned that they despised the 396 classic blue, but I actually liked it. Now there are many choices for color and the "white" (I think you called it clear) looks to be the color of choice. If you look at the 346XT the display color works well in red (amber), but the contrast is just a little harder to see than the 396XT.

1408. "Upper" and "lower" base frequencies

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-27 15:18:39 UTC
From: martinezjohnnie
Topic: 1408 Message: 1408

Hello,

The PSR-500 and BCD396XT both require "upper" and "lower" base frequency settings when creating "custom tables" or "bandplans" for Motorola UHF systems (and rebanded 800 MHz systems).

The Radioreference guide generally only identifies one base frequency (presumably the "lower" one) for these systems.

How does one go about calculating the "upper" base frequency? Is there a formula for doing so?

Thanks!

-Johnnie

Topic: 1408 Message: 1409

Oddly enough, the answer is the same on both lists :) :

For Uniden models, you can use:

http://info.uniden.com/twiki/bin/view/UnidenMan4/CalculatingUpperBaseFrequencies

(There is a handy Excel spreadsheet at the bottom of that page.)

I don't know of a similar resource for the PSRs.

In my opinion no any changes in RF perfomance been made in 396XT in comparison to 396T.

UPMan, please clear this situation!

Can you please provide me with the URL to the website, so that I can download and print?

All I had on the CD was the difficult to use Wiki (and even more difficult to properly print) and the reference guide, but no printable (PDF) users guide...

1413. P25 Systems and the APCO Band Plan settings in FreeSCAN

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-27 19:03:42 UTC
From: Brian Hall
Topic: 1413 Message: 1413

I'm programming the Idaho IIMARS system (http://www.radioreference.com/apps/db/?sid=4742) into my BCD396XT in anticipation for a trip to Idaho next week. In FreeSCAN, there is a site setting for P25 Standard systems called APCO Band Plan that has rows labeled in hex (0-9, A-F) with frequency and spacing. Do I need to set anything for this system specifically, or is this just for the re-banded 800MHz systems? The IIMARS system uses frequencies in the 700MHz range.

Any help would be greatly appreciated. Thanks!

1414. Re: [BCD396XT] P25 Systems and the APCO Band Plan settings in FreeSCAN

The XT (and other Uniden scanners) will fill the bandplans in
automatically for P25 systems - rebanded or not - rebanding has no
effect on P25 systems other than changing the control channel frequencies.

1416. Re: [BCD396XT] Re: "Upper" and "lower" base frequencies

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-27 22:07:31 UTC
From: Richard A. Victor
Topic: 1408 Message: 1416

The values from RR are in MHz for the Base Frequency and kHz for the
Step (or Spacing). Be sure to change the Step to MHz when using the
Uniden supplied formula. The failure to do this will result in
calculations such as

UpperBase = 480.500 + ((759 - 380) * 12.5) =

480.500 + (379 * 12.5) = 5218 rather than

480.500 + (379 * .0125) = 485.2375

The spreadsheet does it for you automatically.

Dick (who still remembers his high school physics teacher who was a
stickler for getting the units right when working with formulas).

Thanks for your response.

I'm pretty much in agreement with your observations, including your opinion about the 396 "classic" blue--I grew to like it a lot.

I've got my 396XT wrapped in the Uniden-made nylon case I bought for my 396 "classic." The clear plastic window isn't helping the display's legibility either, but I like to keep my radios as protected as possible.

On a side note, the 396XT's overall performance seems improved from my early-production "classic," which had the rub-off faceplate lettering and high-volume speaker-buzz problems. I monitor a federal trunked EDACS system here, which went to narrowband transmission signals (not a true "EDACS narrow" system). The ability to select "NFM" when I programmed the 396XT seems to have increased the audio level for this system.

There was a noticeable difference in audio levels between the EDACS system mentioned above and everything else (conventional and Motorola trunked systems)on my good ol' "classic."

-Johnnie

--- In BCD396XT@yahoogroups.com, <dmccorm@...> wrote:
>
> Interesting that you say it's harder to read than your 396T "classic" model. I find it to be about the same except better on the brighter colors. The blue on the XT is darker than the 396 classic. The only complaint I've read so far is that the contrast at an angle looking down at the radio from above is hard to read. Many users mentioned that they despised the 396 classic blue, but I actually liked it. Now there are many choices for color and the "white" (I think you called it clear) looks to be the color of choice. If you look at the 346XT the display color works well in red (amber), but the contrast is just a little harder to see than the 396XT.

1420. Re: Good RF performance, but dim display

Yes.

The only options for the backlight are to go dimmer. Backlight brightness is only an issue for me with the darker backlight colors (most noticeably red and blue).

My overall concern is more about the relative contrast of the information contained on the unlit display.

As I said, it's not a show-stopper, but I'd gotten used to the slightly higher-contrast unlit display on my 396T.

Thanks for the suggestion.

Hello.

I don't mean to start a debate, but I suspect the definition of "RF performance" is important to your observation.

After a little less than a week of experience with the 396XT, I've noticed that a couple of frequencies that seemed prone to adjacent-channel interference from household sources on my old 396T are less impactful on the XT. That could be the result of narrower or better filtering, but only Paul Opitz can tell us whether or not the RF circuitry is any different on the XT.

Another improvement I've experienced is with better audio volume from an EDACS system I monitor that uses narrow-band transmission signals. The ability to program the "NFM" mode on the XT instead of the default "FM" for EDACS "wide" systems, seems to have made a real difference. Strictly speaking, this may be considered more of a programming "feature" rather than "RF performance."

1427. Disabling Battery Charging?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-28 22:23:50 UTC
From: tedrhayes
Topic: 1427 Message: 1427

Just received my 396XT. On my 396T I was able to disable charging, but I can't remember how it was done, and I can't find it anywhere in the manuals.

Even though I use NiMH, I prefer to charge them in an external charger. If you set the switch to Alkaline it disables charging, but I believe it misinterprets the battery voltage and reports as low battery.

I'm assuming the 396XT has the same capability to disable internal battery charging.

Does any one know how to do it?

Ted

P.S. Can't wait for the Butel Software - programming the 396XT by hand is a real pain

It's the hardware switch behind the batteries. Set it to ALKALINE and it
will not try charging the cells.

Date: 2009-04-29 12:24:28 UTC
From: tedrhayes
Topic: 1427 Message: 1429

I'm aware of the hardware switch - as I stated, on the 396T, when I used NiMH batteries in the scanner with the switch set to Alkaline, the batteries would not be charged if I plug the power cord in, but if I ran with out the external power, the scanner would prematurely report "low battery" because I believe it was misinterpreting the battery voltage.

I know there is a way to disable charging regardless of the setting of the hardware switch - I know because I did it - though I can't remember exactly how. I believe it was some combination of held keys while the scanner was turned on or the power cord was plugged in - just can't remember or find it in the manual.

My question/assumption is that the 396XT has the same capability, just trying to find it.

Thanks

It may have been "misinterpreting the battery voltage" because you
told it that you were using alkaline batteries while you were
actually using NiMH batteries. The voltage characteristics of the
batteries are different.

I guess its just another attack of "SomeTimers" desease - thought for sure I took specific steps to disable battery charging on the 396T.

Thanks,

Ted

UPman - you haven't been keeping up with the thread.

If you set the switch to Alkaline, yes it won't charge, but if you put rechargeables in, the low-batt will kick in too early since its calibrated for Alkaline batteries.

If you set it to rechargeable, it the low-batt will kick in correctly, but he doesn't want the batteries charged as he'd prefer to use an standalone smart charger for his batteries.

So yes, I think a firmware change would solve this issue. Either by allowing the user to set the battery charge time to 0, or disable battery charnging... or allowing the user to set when the low-battery alert kicks in.

The original poster stated he doesn't charge the batteries in the scanner
but with an external charger. So why would he need an option to disable
battery charging ? Just don't connect the power supply to the scanner.
Am I missing something ?

Yes, I have. Including the post where I said that if the unit was behaving as described, something was wrong with the unit.
The switch does not change the low-battery alert or cutoff level.

UPman - you haven't been keeping up with the thread.

If you set the switch to Alkaline, yes it won't charge, but if you put rechargeables in, the low-batt will kick in too early since its calibrated for Alkaline batteries.

If you set it to rechargeable, it the low-batt will kick in correctly, but he doesn't want the batteries charged as he'd prefer to use an standalone smart charger for his batteries.

So yes, I think a firmware change would solve this issue. Either by allowing the user to set the battery charge time to 0, or disable battery charnging... or allowing the user to set when the low-battery alert kicks in.

From: tedrhayes
Topic: 1427 Message: 1440

I like to plug it in when I'm in a stationary location for an extended period (e.g., at my desk when I'm working, at night when I place it on my bed-stand) rather than run the batteries down (and needing carrying an extra set).

I don't want to bother taking the batteries out when I plug it in.

Yes. Running the unit off of the "wall-wart" and saving the charge of
the batteries, but retaining the option of "yanking the plug" and going
out the door without first inserting batteries. Putting the switch in
the "alkaline" position works well with the "beeper" killed.

Topic: 1427 Message: 1442

So you can plug it in and run it off of line power and not discharge the batteries, so that when you unplug it, your batteries will still be as charged as they were when you plugged it in. I do this, I charge the batteries in an external charger and not via the radio's charger, yet plug it in when I'm working so i don't run the batteries down when I don't need to.

---------- Original message from Clark Rennie <c.rennie1@...>: ----------

The original poster stated he doesn't charge the batteries in the scanner
but with an external charger. So why would he need an option to disable
battery charging ? Just don't connect the power supply to the scanner.
Am I missing something ?

Two questions.

1. From what I have read the charge time is just that. A time. Is that correct? There is no sensor that detects whether the batteries are fully charged, partially charged or dead. It just charges till the clock runs out?

2. Can you run the scanner with the wall wart with no batteries in the scanner? That way you can externally charge the batteris if you want and still have power to the scanner.

Thanks
jeff

1. Correct. There is no way to reliably detect full charge when charging NiMH cells in series (or when charging single cells at less than about a ..5C rate).

2. Yes, but I don't know why you wouldn't just set the switch in the battery compartment to ALKALINE in this scenario.

From: Richard A. Victor
Topic: 1427 Message: 1446

If the low-battery alert or cutoff level doesn't change, is it merely based on the voltage dropping below a certain value?

If that's the case, I would think that it's going to give the alert at rather different times in terms of remaining battery life depending on the type of batteries in use given that alkaline and NiMH have different discharge curves.

Am I in error?

Dick

BTW, it seems to me that generally charging the batteries outside the radio and setting the battery charge time at 1 hour is unlikely to hurt the batteries given the low charge rate unless one keeps restarting that 1 hour period by disconnecting and reconnecting the external power frequently. Even the best external chargers continue with a trickle charge following complete charging.

Thanks again Joe.

You were correct.. I had it in Priority, not SAME scan..

I have to say, though, I'm a bit dissapointed. Putting it into SAME scan, A) only allows one county at a time, and B) even more importantly, it ONLY scans the Weather freqs. That makes the 396XT, and 996T, $500 weather radios! For that amout of money, I would've thought it could continue to scan my areas of interest WHILE keeping an 'ear' out for the SAME codes...

I've never used this feature on the 996 or I would've already known all of this so again, thanks for pointing me in the right direction...

What you want requires two seperate receivers: one to continuously monitor for a SAME alert and one to scan.

Or, you'd have to be willing to accept the audio being interrupted about every .5 seconds for about .25 seconds to check for a SAME alert.

Thxx wxxld be xxxrataxxng ax xxll.

It is based on the battery voltage dropping below a certain value. The value selected provides for pretty much dead alkalines and not quite dead NiMH. You don't really want to run NiMH down to dead...especially in series. If one cell goes dead before the others, it can reverse, which quickly ruins the cell and can cause catastrophic problems during rapid charging.

The voltage curve during discharge on a NiMH is pretty much flat until it is dead (after an initial drop). Alkalines have more of a constant downward slope.

I think you can monitor more than one county as long as you put them
in one SAME group. Looks like it provides for up to 8 counties per group.

No - you can program several counties and have it alert on all of them.

> and B) even more importantly, it ONLY scans the Weather freqs.

That's the only place the SAME codes are sent.

> That makes the 396XT, and 996T, $500 weather radios!

And FTO makes them $500 pagers. But, the only way for these modes to work is to monitor the appropriate channels nearly simultaneously. A priority sample simple will not work.

> For that amout of money, I would've thought it could continue to scan my areas of interest WHILE keeping an 'ear' out for the SAME codes...

Nope - you can get a dedicated WX RX cheap. As I mentioned above, it is not possible to scan and use SAME (or FTO) at the same time (no pun intended).

> I've never used this feature on the 996 or I would've already known all of this so again, thanks for pointing me in the right direction...
>
> John

Anytime. I hope you now understand why it is the way it is.

If only NOAA would transmit the 1050 Hz alert tone BEFORE the SAME codes, the 1050 Hz alert tone could be used to signal a pending alert - allowing the scanner to tune to the WX channel and decode the SAME bursts.

I actually have a GE MVS mobile that has a fast priority around the half to quarter-second rate. When someone is talking, you can't even detect it - it's THAT fast! The only time you can hear the sampling is when a channel has a paging tone on it.

Unfortunately, it takes longer to discriminate data (which is being FSK modulated using two tones that fall well within the normal voice spectrum) than a solid tone.

I too have multiple "counties" programmed into the WX alert. Is it true I can only monitor one?county at a time? Sounds odd since all my other cheaper scanners can monitor more than one. I think??

?

Maybe Upman can confirm this thought. If the 396xt is plugged in, with NiMh batteries in it and the radio is turned on - I doubt if the batteries would charge at a high rate. Problems with charging batteries in equipment usually occur over long periods of time. Most I have heard are involving lithium cells not NiMh batteries. I have never had a charging issue with my radio being used as a charger. I am curious as to how many group members have actually experienced problems. It might be the issues over laptops and cell phones are getting confused with the radios.

1. Correct. There is no way to reliably detect full charge when charging?NiMH cells in series (or when charging single?cells at less than about a ..5C rate).

2. Yes, but I don't know why you?wouldn't just set?the switch in the battery compartment to ALKALINE in this scenario.

Subject: Re: [BCD396XT] Re: Disabling Battery Charging?

Two questions.

1. From what I have read the charge time is just that. A time. Is that correct? There is no sensor that detects whether the batteries are fully charged, partially charged or dead. It just charges till the clock runs out?

2. Can you run the scanner with the wall wart with no batteries in the scanner? That way you can externally charge the batteris if you want and still have power to the scanner.

Thanks
jeff

Subject: Re: [BCD396XT] Re: Disabling Battery Charging?

So you can plug it in and run it off of line power and not discharge the batteries, so that when you unplug it, your batteries will still be as charged as they were when you plugged it in. I do this, I charge the batteries in an external charger and not via the radio's charger, yet plug it in when I'm working so i don't run the batteries down when I don't need to.

---------- -- Original message from Clark Rennie <c.rennie1@verizon. net>:
---------- --

The original poster stated he doesn't charge the batteries in the scanner
but with an external charger. So why would he need an option to disable
battery charging ? Just don't connect the power supply to the scanner.
Am I missing something ?

Just making sure you understood. The tone is on the non-PRI channel.
That's the only time you can *hear* the sampling.

The sampling does slow down when the PRI channel is active, but with the
wrong CTCSS/CDCSS - to about the level of a typical priority sample, so
your comment is still valid from that aspect.

What you could do is flip the switch in the battery back to alkline battery. Then plug in the ac adapter and it won't charge the battery. Then when you want to charge the battery flip the switch to the other side. Then plug in the ac adapter and it will charge the batteries.

I received my GPS device last night and it works great! One thing I had to overcome was baud rate. for the GPS to work, the baud rate has to be set to 4800. when I interface with my computer I use 115200, and that was my only hiccup.
I went out for a drive and everything worked as envisioned.
I no longer have to lock and unlock systems as I move from town to town. This is truly a BIG improvement over non-location based scanning.

That's a good idea given that it seems to be the GPSr standard (serial) baud rate.

Actually a better idea is that when you plug the GPS in the scanner finds it
and automatically sets the baud rate to 4800 then when you unplug it it
reverts back to the previous setting so it's ready to go with software.
Unfortunately I don't think theres a way for it to tell the difference
between software and a GPS device, or it would have to be one specific GPS
device that was made for the scanner. I don't see that happening though.
I also don't see where we could grab another keypad combo to work it off
there without pushing something else to the menu in which case others
wouldn't like the setup, so I think were relegated to the menu's for
foreseeable future.

If it looks for some reply data, it might be able to tell it's there.
Most devices won't reply if they don't understand the command sent, or
they have a basic reply which is short.

Topic: 1194 Message: 1467

I just use the rear connector for GPS and the front for control/prog.
I can't remember the last time I had to change the port speed.

But, I do wish the scanner had some programmable 'soft keys' that could
do whatever function you wanted. I could particularly use one set for
turning the CTCSS/CDCSS SEARCH on or off, and another for setting NAC
SEARCH on. I also wish it could do both like the GRE models. All the
micro would have to do is switch (dare I say SCAN them) them until it
got a valid decode on one of them.

The soft keys are one of the features I think GRE has over Uniden.

1471. P25 Singe Freq Trunking and Freescan

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-30 22:23:39 UTC
From: bearcat
Topic: 1471 Message: 1471

I hope I am not off topic for mentioning this here.

If so. Sorry.

Has anybody else noticed if they enter a P251FT system with FreeScan it will not work,

Meaning while scanning in ID SEARCH it near stops on any conversations.

Everything in FreeScan appears to be set correctly.

If I enter the system by hand all is well.

Anybody else notice this?

Rich

1472. Volume control

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-01 01:14:26 UTC
From: Larry Koch
Topic: 1471 Message: 1472

Is there a way to permanently change the function of the rotary control (knob on top) so "volume" is the default? Right now the default is to change the direction of the scan. To change the volume I have to tap the knob to get to the volume function.

I've never figured out why the direction of the scan is something I would want to change.

Thanks

Larry

1. Yes - just lock the keypad and the default will be volume. I know -
not the best fix, but it works.

2. If you miss something and you want to 'scan back to it'.

http://info.uniden.com/twiki/bin/view/UnidenMan4/CloseCall?sortcol=table;up=#Set_Lockout
Set the lockout for Hits with Scan.

Or, if the real problem is how long the scanner dwells on the found frequencies when scanning, change the delay from 2 seconds to 0 seconds.

Paul;

Have you considered adding Blu-Tooth to your GPS enabled Scanners?
I realize it's another "radio" and in my ignorance there may be a simple reason why you can't, like maybe
interference with the rest of the "scanning" ability... but if possible it could solve the problem of
RH-96, WITH GPS, wireless audio to Blu-tooth headsets etc...

I sure would like to be able to throw my Blu Tooth GPS on the dash and just have it work!

Just me thinking again... Very dangerous indeed!

The instructions for the WX alert are confusing because it uses "counties" and "same" as the same thing. At least that is how I guessed it.
If the manual used FIPS and counties as the same thing then it would have been much?easier to figure out. Now that I have it clear in my mind I am using the WX alert like a "system". I have a system for my home area and one for a vacation area we visit regularly. In?each system I have a "group" of FIPS (or counties) that satisfy my needs.

It's not the instructions that are that way - most weather alert units
use the terms interchangeably. SAME is based on FIPS, so it's easy to
see why that is the case. I think even NOAA uses them each in different
places.

That said, you cannot scan and use SAME at the same time. You can use
either one or the other. There are no Systems or Groups for SAME slots.

Yes that is true. No systems or groups. But in my mind I think of it that way when I am programming the WX freqs in my scanner. It makes it easier for me and it works. That's all. I have what I need programmed and it is working properly. Thanks for everyones help.

Does anyone know if there is a way to lock out channels unless a GPS is attached?
When I am home, I am only interested in what is nearby me. This is true when I am driving, but the GPS manages it. At home without the GPS hooked up, EVERYTHING comes in.
I need some way to tell the scanner I am home and go to a "home" mode.

How about keeping the quick keys, for those systems you don't want to listen to at home. Leave those quick keys off. Then when you have the GPS connected it will turn them on. Another way is to use the Start up keys. Have 1 set of start up keys for when you are home.

I set up two different sets of systems: System assigned to Startup Key 1 are for GPS use and are all enabled/disabled by GPS (and are subdivided down to the patrol district). Systems assigned to Startup Key 2 are for at my desk and don't use GPS (and are "lumped together" more coarsely than the GPS ones). When I put it in the car, I press 1 while powering on to lockout the "desk" systems and unlock the "mobile" systems. Similarly, when I put it back on my desk, I hold 2 while powering on to lockout all the GPS systems and unlock the desk systems.

The GPS will not control Quick Key status - it only uses the Lockout status.

As for the best solution, I would submit that the easiest solution is to
just use a cheap GPS at your house or maybe get a GPS data simulator for
a PC to feed the scanner 'fake location data'.

1491. problem w/ patches and remote control protocol

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-04 15:34:50 UTC
From: fleidy@neo.rr.com
Topic: 1491 Message: 1491

Gang (mostly Paul),

I've noticed an oddity with the remote control protocol. The system I monitor has a dynamic patch between talkgroups 35408 and 35568. I have neither programmed into the radio and am listening on open mode. There are times when the display and PC protocol show different things.

I had the display showing 35408 as the active talkgroup. But, the PC protocol told me the active talkgroup was 35568.

I've seen this quite a few times. I don't recall having this problem on my 396T.

Is this something that has been noticed by others? Can it be addressed in some upcoming firmware patch?

Thanks,
Frank

By "open mode" you must be talking about ID-Search. Open mode is a GRE term.
The 396 Classic would not display patched talkgroups, the XT does. As for the protocol, I suspect that it doesn't report just the patch, but does report the associated talkgroups as reported by active control channel as it sees it.

My bad. Was trying to type fast and put OPEN instead of search. I should clarify. I am using display mode 2. The pactch information shows on the second LARGE line. The line below it shows the talkgroup ID (in mode 2). It is that line that is not in sync with the GLG command (used by most programs for reception status).

I believe the issue is larger. Even in ID SCAN mode, I've seen the same thing. Some times the Fire and EMS dispatch channels (3696 and 4016, respectively) are patched together during dispatches. The PC protocol logs 4016 as FIRE DISP. I suspect something is wrong with the way the GLG command reports status.

It almost looks like the firmware is using the patch info to log the command, instead of using the channel grant itself to log and send the GLG response. But, that's just the programmer in me. I've been studying the code for Trunker way too much. :)

The software I use (Proscan) shows the raw PC protocol data. I'll try and grab a sample of the STS (display status) and GLG (reception status) when they are out of sync.

Could be that you have found a problem then. I suspect it should report the same information that is fed to the display. The information should be the same in the reported data as is in the protocol, no matter what display mode is toggled.

Thanks to everyone who replied. I will try the solutions provided as soon as I finish working out a location range kink I am experiencing.
Somewhere between Freescan and my scanner, the ranges of my locations change from my desired settings of 3-5 miles to higher ranges, usually in a multiple of 8, such as 8 miles, 32 or 64 miles.
This is frustrating, but once I resolve it, I will tackle the generation of Systems with Startup Keys.

Actually this is a bug that occurs in .8E. It happens with conventional groups. However, the next version will fix this.

A few more weeks and it will be ready to go with support for the new XT scanners as well.

Paul:

I have the 396XT and the RH-96 remote head. I previously used the remote head with a straight 396 and volume from the external speaker I used was good. Now with the XT I can barely hear the exteranl speaker. Suggestions on what kind of speaker or what to do to get adequate volume from the external speaker using the remote head with the 396XT?

Thanks,

Rick

hello

just want to buy 396xt but ,i'm not see hardware spec. for audio output?
is it same audio output by internal speaker (396T or 396XT?) wich is stronger audio and clear crisp?
how mW? 380mW or 400mW? Wich is stronger audio end is possible listen whan driving a car inside is Loud Audio from 396xt or have to connect to external speaker?
Sorry for my English i try asking sombody.

Thanks

1505. BCD396XT Swivel Beltclip screw came off.

Just to let everyone know, my bcd396xt belt clip swivel screw came off. I figure it did because the belt clip was always really stiff, unlike the bcd 396t. To fix it, I had to screw the belt clip with the screw already attached to it. The only way I actually can take the belt clip off is if I screw the whole thing off with the screw itself. I figure since it is a minor hardware issue, I will not worry too much, but just be more careful and gentle with it. I barely mess with the belt clip anyway, so it should not be a major problem I figure. Just wanted to let you all know in case you guys have a similar experience. If it does bother me too much I will just have scannermaster look at it I guess. Other than this, my experience with the radio has been outstanding, and expectacular. I love this radio! In addition thank you again upman for the support! :-)

I break the plastic belt side of my belt clip every 4 to 8 weeks on my BCD396T. I keep spares in my car and laptop bag. It would be nice if I could release the radio without spinning it upside down, that can be difficult with a jacket on.

Try it with other radios and items on your belt.

I also wish a 3" version of the belt clip were available.

Actually the metal piece in the back unscrewed off. My 396t never did that. Well that's life I guess not everthing is perfect. I figure it is a minor hardware issue. I never really touched my 396t clip so it should not be a problem I hope. The clip is attached tightly to the radio and it only comes off if I unscrew it off counter clockwise with the metal piece with it. I will try it out and keep you all updated. The scanner is great otherwise. I am still testing my close call function though. All other functions are just fantastic in contrast! But I think it will be just fine. Thanks for the reply though.

Something is wrong here. The metal piece has grooves that fit with tongues on the scanner. The only way to unscrew it is to break the tongues on the scanner's case (unless it was never installed/seated correctly in the first place). I suppose it's possible if you broke the knob, too, but that is extremely unlikely.

Does your scanner still have the tongues where the belt clip knob goes? There are two, and they are perfectly vertical.

Maybe you can't figure it out since it doesn't support the XT any more
than ScanCat does with the current respective versions?

Does anyone know if there is a way to modify the 396xt's Service Search ranges? I looked around for an answer and did not find it. Specifically, I would like to change the air band search range from 118 MHz to 137MHz and avoid the 108 - 118 MHz spectrum. I'd like to also modify the ham band as well. Thanks in advance.

You cannot change the preset service searches. However, you could use the 10 Custom searches to build the ranges you want to search.

In the meantime:

1. the scanner itself is a KILLER (this from a GRE/RS guy)

2. FreeScan and ProScan are both available. If you don't want to buy ProScan you have the option of using FreeScan and then either exporting from FreeScan or uploading to the radio and then downloading to the Uniden software in the future.

I skimmed (can I say scanned?) the review pretty quickly, but it appears to be a good and thoughtful summary of the radio and a fair comparison against the T and the PSR-500.

The following statement, while true, made me smile: "Of course, some people will find GRE's methods easier, you will have to try them to find out" since it's written by someone selling both radios. :-) I have a PSR-600 and think it's a toss-up...fwiw.

Thanks for the link

1531. P-25 Wait Time

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-08 01:41:59 UTC
From: SRehm24416@aol.com
Topic: 1531 Message: 1531

I was trying to adjust the P-25 wait time on a P-25 trunked system. That option is not available for a P-25 trunked systen in the menu. I can only find the P-25 wait time in the menu when programing conventional, single frequencies (that may be p-25). Is that correct?

If that is correct does that mean the scanner automatically adjusts for the wait time when I set up the system as P-25??

That's pretty short-sighted. Do you mean they really cannot learn in any way except from a printed manual, and even then not be printing the existing material? They can't learn from asking questions of you or the list users?

They could just print the 396T manual since it covers 95% of the scanner with only the newest features missing.

If it's really a P25 system as you say, there is no wait time because there is no need to wait to see if the signal is P25 or analog, as on P25 systems ALL transmissions are in P25 format.

14 hours - provided you're talking about charging them in the scanner
and provided the cells are still holding full capacity. That happens to
be the default for the scanner which is not a coincidence since it's
2300 mAH cells that it comes with. That's why the charge time is 14 hours.

Topic: 1538 Message: 1541

To add to what Joe mentioned the timer resets (and starts over) when the power is cycled on the radio and you need to be sure the battery switch is set to NiMIH.

Here is what UPMan posted on RR: "If you are charging in the scanner, note that the 14 hours is a timer. It is not detecting that the batteries are fully charged. You can adjust this timer by changing the "Set Charge Time" option in the scanner (can be set to be from 1 - 16 hours). The timer is reset when you remove external power. The timer and charge rate are not significantly affected by having the scanner on vs. off.

Roughly 1 hour of charging in the scanner will give you about 45 minutes of scan time (very roughly...). Conversely, for about every 1 hour of scanning it takes roughly 1 hour, 20 minutes of charging to replenish. So, if you use the scanner for 3 hours, it takes about 4 hours of charging to bring the batteries back to near full. (Please apply this as a "rule of thumb" and not as a mathematical certainty.)"

IMHO, I wouldn't call it a "official review", especially if it's on a web site selling the radio. I can find a similar review style on the Grove web site with an advertisement from the same seller next to it.

As Joe mentioned, both radios have benefits that the other does not. Each manufacturer just does it a little differently.

Paul,

Thanks much for the update on progress. I think what one respondent meant to ask was, will the new version also support the T, or only the XT? For those with both models it would be nice to manage only one version.

As posted many times before: mobile scanners are used while the user is mobile. In such a case, most of the time no computer or access to this group is available... It is needed by many to have a manual, which one can have handy, if there is no access to online (or CD based) help...
My hope is that Uniden will take the "T" manual, change the 5% and issue it as the "XT" manual (as a PDF), together with the software. Uniden: is that planned?

If it's really a P25 system as you say, there is no wait time because there is no need to wait to see if the signal is P25 or analog, as on P25 systems ALL transmissions are in P25 format.

Joe M.

SRehm24416@... wrote:
> I was trying to adjust the P-25 wait time on a P-25 trunked system. That option is not available for a P-25 trunked systen in the menu. I can only find the P-25 wait time in the menu when programing conventional, single frequencies (that may be p-25). Is that correct?

This is no and won't be a PRINTED manual, not sure what it will take to get this through peoples heads. Probably never will be another manual for Uniden or GRE scanners in printed form unless the user prints it themselves. Now back on the topic of software!

The Wiki is the manual, but they put it in PDF form. The advantage being if changes/updates are made Uniden can quickly and easily update the Wiki and resulting PDF for the changes.....can't do that with a manual!

You really don't need the manual even when mobile IF you learn to program manually and learn the functions of the radio. Everything is available through the menu's so basically you learn to use the menu and you can do whatever you need. It just depends on how serious you are at learning the menu's. If you owned/own a T then half the battle is over, the added features are not that hard to learn.

As for going mobile, yup, when I travel I have a laptop in the truck or car, even in the offroad truck I have a laptop mounted. And most of the places I go there is wireless coverage for the computer if I need it, even in the mountains of TN.

Well, that is what you do and how you use your scanner.

This is my first uniden scanner, and people who have seen it had no scanners at all before. I had a Pro-106, but I sold it, as I like the smaller size of the Uniden. I have never considered that I should compare the size of the Pro-106 + its paper manual with the size of the Uniden + a laptop...

So you may not need a manual, but any person I spoke to expressed they would need one.

I buy lots of complex electronic gadgets, and I never had one which did not have (a pdf or paper) users guide.

And I have not heard of a trend where manufacturers would say: here is a cool new gadget, we give you a good fan base and some reference guides - go ahead, figure it out...

So you may not need a users guide, but if you read the various posts on this forum and on many other forums, many people express that they would need one.

I prefer to use my gadgets, vs. wasting my time to figure them out. Life is too short for that, and there are too many gadgets. That is why if Uniden continues with this approach (i.e. no users guide) this was the first and last Uniden scanner I bought.

Did you try to print the Wiki? I printed it: it does not look nice at all, and it is really difficult to use on paper. So yes: there is a Wiki and no, the Wiki does not substitute a decent, printable PDF manual.

I wonder if part of what we are tripping over is differences in terms. There is a ~300 page user/instruction manual on the disk with the radio and on the Uniden website. Compared to what you usually get for electronics of all sorts, it's pretty good. It prints very nicely. I printed it with Acrobat at 2 pages per page landscape and then made a double-sided copy so it shrinks to about 75 actual pages.

But I'm not sure this is what people want? Are you looking for something the size of what was in the box with the 246T? I could be wrong, but I just don't think that's in the cards. The 396XT has too many features and too many programming variables to ever have a useful "manual" that would be that size.

Maybe what people want is a "quick start" card, but based on what I got last time I bought a DSLR, that's pretty useless. A lot of space goes into how to insert batteries and turn the thing on...but they don't - because they can't - get into any useful level of discussion and instruction on the many, many menus and features.

I know you and lots of people are unhappy. I am just not sure there's an alternative. BTW/FWIW, this was technically my second Uniden scanner, but only by about a week. I bought and then re-sold a 246T and basically have learned the Uniden approach on the 396XT. It's very different but it can be done - but it definitely requires a whole lot more time invested to get on top of what is a pretty sophisticated electronic device.

My $0.02 with no bad feelings directed at anyone...

John Newell

Just to be on the same page: what I call a users guide is something like this:
http://www.uniden.com/pdf/BCD396Tom.pdf

It is called "Owners Manual"...

As per many people that Manual is 95% the same as the one for the XT. So I hope Uniden will change that 5% and then we will have a file which will be downloadable by clicking:
http://www.uniden.com/pdf/BCD396XTom.pdf

As I mentioned in a post earlier this morning, Uniden has no plans to make a "Traditional" owners manual.

At this point, nothing new has been said on this topic in the last 12 hours (despite many posts). So, further messages regarding Printed Manuals will not be approved to the group (for those still being moderated). For those who are not moderated, please do not post further on this subject for a while. Not trying to "pre-emptively censor" but this is the 2nd or 3rd time the topic has come up and it always drags on way too long, eventually degenerating into what we've been seeing this morning.

Paul,

I don't care whether the manual is printed or available on cd or the Internet. I do feel that the actual content of the material which has been furnished is lacking in that many of the functions would be impossible to figure out without help from questions and answers in groups such as this. I don't think that it's fair to users to expect them to get the information necessary to use the features that are advertised by joining a support group. Close Call and the Band Scope are two examples of things that are very unclear without some outside assistance. The very number of questions here and on RR confirm the fact that there is a need for more information in some form. Not all of the people posting these questions are doing so without making a reasonable effort to find the information in the material which has been furnished.

Is Uniden doing anything to deal with this issue other than inviting users to write articles for the Wiki?

Between the lack of proper documentation for use of the scanner and the unavailability of software from Uniden to program the scanner at the time of the scanner's release, one is left with the impression that the Uniden was only concerned with getting the hardware out. As good as the hardware is, that's only part of the job and, frankly, the only saving grace has been your willingness to answer questions here and on RR. I suspect that without that many would have returned the scanners to their dealers.

I don't really care if you approve this for posting to the group or not since it's not intended to start a debate, but I do hope that you consider what I've said.

I definitely prefer the xt over the others by far. I have owned just about 10 scanners in the past and have owned the 396T classic makes me appreciate the xt even more. Interestingly enough I have programed all of my radios including the xt manually. I guess it makes me nothing short of an amateur in manual programming. Lol. Happy scanning to all.

IMHO, I wouldn't call it a "official review", especially if it's on a web site selling the radio. I can find a similar review style on the Grove web site with an advertisement from the same seller next to it.

As Joe mentioned, both radios have benefits that the other does not. Each manufacturer just does it a little differently.

I sure did read the second part. That's how I already had the radio programmed. It's just too bad that we can't modify the current service search ranges in order to have more room in the custom search ranges. But I'm not complaining, this is still a great radio!

Did you see the second part? You CAN make your own with the custom
search ranges. Nothing to be afraid of...

I have a high end DSLR (Canon) and the user Quick Start is excellent in what it covers usage wise. The items packed with the 396XT should get most people going very nicely short of programing software but thats in the works. The unit isn't that tough to figure out even for someone who's never used a scanner before. I know, my girlfriend has never programmed one and has issues comprehending technical things at times but in an hour without my help she could program Conventional, LTR and P25 on the 396XT without the computer. Is she in trouble on trips :) !! I'm impressed she picked it pretty well in just a week.

Subject: Re: [BCD396XT] Re:Printed Manual

I wonder if part of what we are tripping over is differences in terms. There is a ~300 page user/instruction manual on the disk with the radio and on the Uniden website. Compared to what you usually get for electronics of all sorts, it's pretty good. It prints very nicely. I printed it with Acrobat at 2 pages per page landscape and then made a double-sided copy so it shrinks to about 75 actual pages.

But I'm not sure this is what people want? Are you looking for something the size of what was in the box with the 246T? I could be wrong, but I just don't think that's in the cards. The 396XT has too many features and too many programming variables to ever have a useful "manual" that would be that size.

Maybe what people want is a "quick start" card, but based on what I got last time I bought a DSLR, that's pretty useless. A lot of space goes into how to insert batteries and turn the thing on...but they don't - because they can't - get into any useful level of discussion and instruction on the many, many menus and features.

I know you and lots of people are unhappy. I am just not sure there's an alternative. BTW/FWIW, this was technically my second Uniden scanner, but only by about a week. I bought and then re-sold a 246T and basically have learned the Uniden approach on the 396XT. It's very different but it can be done - but it definitely requires a whole lot more time invested to get on top of what is a pretty sophisticated electronic device.

My $0.02 with no bad feelings directed at anyone...

Well, that is what you do and how you use your scanner.

This is my first uniden scanner, and people who have seen it had no scanners at all before. I had a Pro-106, but I sold it, as I like the smaller size of the Uniden. I have never considered that I should compare the size of the Pro-106 + its paper manual with the size of the Uniden + a laptop...

So you may not need a manual, but any person I spoke to expressed they would need one.

I buy lots of complex electronic gadgets, and I never had one which did not have (a pdf or paper) users guide.

And I have not heard of a trend where manufacturers would say: here is a cool new gadget, we give you a good fan base and some reference guides - go ahead, figure it out...

So you may not need a users guide, but if you read the various posts on this forum and on many other forums, many people express that they would need one.

I prefer to use my gadgets, vs. wasting my time to figure them out. Life is too short for that, and there are too many gadgets. That is why if Uniden continues with this approach (i.e. no users guide) this was the first and last Uniden scanner I bought.

You seem to miss the point:
There will be a PDF or already is, I forget.
There IS a user guide
There IS a Wiki (which is whats used for the PDF
And you can print the PDF for a hard copy.

Fact is that 90% of electronics manufactuers ARE going paperless and that
when you buy electronics it will be a CD or webpage where you get operating
instructions..

What I do laptop wise is what a lot of scanner owners do these days. As you
get more involved you'll understand :)

Paul,

Thanks much for the update on progress. I think what one respondent meant to ask was, will the new version also support the T, or only the XT? For those with both models it would be nice to manage only one version.

I would like to know if anyone elce is getting this. when I inprot from UASD into freescan it seams everything is ok. then i load into the 396XT and for the most part i think everything gos but when i download from the scanner back to the PC its seams i lose some or most of the tones they turn up as "none" i have tryed to find in the online manual how to switch from Alpha tags to frequencys. on the 396T its func +5 but that dose not work on the 396XT so i can check if the tones are making it into the scanner.

Thanks for the help

1569. Re: problem w/ patches and remote control protocol

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-09 14:54:29 UTC
From: Frank Leidy
Topic: 1491 Message: 1569

I've been able to confrim that there is a problem with the information reported by the STS and GLG protocol commands. I set up a quick little program to send GLG and STS commands in sequence every 1/2 second. It reports any time the talkgroupID in the GLG command doesn't match the talkgroupID displayed. Once a mismatch is found, it logs the time and the entire contents of both messages. Here's an example (sorry if it wraps lines):

```
---------------5/9/2009 10:44:16 AM---------------
GLG,35568,NFM,0,0,Summit County800,Suburb Fire,TRICOM FD DISP,1,0,NONE,NONE,NONE

STS,011000, ?? ,,Summit County800,,TRICOM FD DISP ,,35408
,,S1:*******--- ,,GRP-*****---- ,,1,0,0,0,,,5,WHITE,0
```

The display is correct. Talkgroup 35408 is programmed as TRICOM FD DISP. The talkgroup in the GLG command (35568) is programmed as TAL FD CMD. This was logged during a call dispatch. At this time, the two talkgroups are patched together.

UPMan, what is the likelyhood of getting this addressed? The GLG command on a 396T doesn't exhibit this behavior.

Thanks,
Frank

Cycling through the three display modes on the XT is Func + 6 while
in the Hold Mode. Note that the present version of Freescan does not
properly load that particular setting to the scanner so you may have
to set it on the scanner rather than merely setting it in Freescan.

Sorry that I can't help with the tones issue as I'm not having that problem.

Upgrade to 0.8E to fix the tone problems.

I've heard someone report the same problem with the Number Tags.

Will the printable manual be released at the same time?

I really really miss it, and I have advised a couple of friends from buying the XT for now, while the "real" manual is not available...

If you read the archives you will find we have known about FreeScan for some time, and that for a short time it was the only choice. The thing is though it is still better to learn to hand program the scanner before using software.

Off to Indy qualifying...day 2

I found software that actually works with the 396XT - FreesSCAN the latest version from www dot scannow dot org. I got my system programmed pretty quick once I figured out the quirks for uploading to the scanner in the software with the driver for the USB->Serial Male conversion cable I have.

Paul,

Thanks much for the update on progress. I think what one respondent meant to ask was, will the new version also support the T, or only the XT? For those with both models it would be nice to manage only one version.

I find FreeScan to be quite usable with the new scanner. As with any sub-1.0 release, it has its little quirks. It occasionally has trouble saving a full profile (it doesn't call it that, but for the sake of convention, I will here) and pops an error message. It also refuses to transfer display color choices for conventional frequencies when data is downloaded from the scanner. All of the concerns about serial to USB adaptors are unfounded, at least with my iOmega adaptors.

Other than that, it beats hell out of hand programming, imports ARC396 files just fine and is free.

I'm glad to hear you like it Tom. There have been a couple of glitches found with 0.8E, but version 0.9 when it is ready is going to fix everything that has been identified so far and have some other enhancements. Plus since 0.8E came out, one of my users has graciously donated a 346XT and that has allowed me to be debug it much more easily then before. Hopefully everyone won't jump ship by the time the next version is ready in a couple weeks. :)

1577. Help Programing P25 Systems

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-11 02:16:47 UTC
From: Chris
Topic: 1577 Message: 1577

Hi was looking for some advice on programming a P25 system. I had an old 396T and was used to programming a system and storing it to a quick key. I.E. I live in Colorado and would program "Adams County" under quick key 1 and then break down Fire, Police, Sheriff, etc into the sub-keys 0-9. Thus I would be able to turn on the Adams County system by pressing 1, and then say Jefferson County by pressing 2. Etc Etc.

On the new 396XT I would like to be able to do pretty much the same but I am finding that quick keys are linked to sites rather than systems. If you would just associate one tower (site) to a system it would be easy but generally you have 3-5 "preferred" towers (sites) per system. I also tried by number tags but all that I can tell is it takes you directly to that system but does not allow you to turn it (scan) on or off. Maybe I'm not looking at this right and it would help to see how someone has something in the Colorado system set up.

Thanks in advance!

Chris

Just program all the sites to the same SQK and it will act just like
your 396T (only better since it will evaluate all the sites rather than
just the first one it sees).

Number keys have nothing to do with scanning. (other than pressing the
System Number Key then holding HOLD to initiate a single-System scan.

Topic: 1577 Message: 1580

If you are programming a muti site system put all your sites (that you will need or will be using) in the same "site" when programming.

I am close enough to the IL StarCom system and I can usually pick up anywhere from two to five "sites" (towers) so I have programmed those five sites in one system and they all are under one "site" in the menu.

I have not figured out yet if I could program each site (tower) as a seperate "site" because each TGID for a county or municipality can potentially "hit" multiple towers (located in another county)?depending on signal strength and location.

The system still gets a quick key and you can turn it on/off as needed.

Does any of that help?

That would not be the best way to program a multisite system in the 396XT, as the scanner would only find the first control channel (i.e. physical site) that was receivable.

You should program each physical site as a different site in the scanner. If you want all sites to be scanned together, just assign them all to the same SQK. This way, the scanner will check each site (physical) for activity of interest and not just the first found (which might not carry all the traffic).

OK. I think I am bad. Here I was trying to help and I get things wrong.

If I got it right I should NOT put all the physical sites/towers/locations in ONE site. They should all be in thier own site. Well, that is what I have, I just gave out the directions wrong. I have 9 different sites for the locations I can receive for the StarCom 21 system. Each location has it's own site and I have the system (all the sites) under one SQK. That is the way it should be ...????

It's not July yet so I am still learning this bugger.

I just got the soft leather case from scanner master for my 396xt and it is awesome.

I agree. But I wonder why they refer to it as soft -- I'm thinking it should be called a hard leather case.

Glad to hear that someone is happy with their case(s)...I opted for the nylon one which does NOT seem to fit. I've done some measurements and it appears that the radio can never go down into the case far enough. Result is that top row of keys are covered and half the display is not viewable. And, yes, I took the belt pivot off. <g>

OTOH it does look like it would be a nice case IF it fit.

Hmmm, I bought the nylon case because it's a little more compact than the leather and mine fits fine, although it's snug. I can see that if the tolerances were shrunk just a tad it might not. I, too, removed the stud for the belt hook. I keep looking at the flange and thinking I'm going to file that off flush but I'll probably never bite the bullet on that.

John,

Can you do me a favor and measure from the bottom of the window to the bottom of your case?

I get 1 and 1/4 inch in the dimension. I really think my case was "cut short" by about 1/4 inch or so. This should tell me if I'm fighting a losing battle or not. <g>

John,

Thank you VERY much. I was beginning to doubt that knew how to INSERT the scanner in the case properly! I have pushed, and tugged and thought maybe it would "stretch" a bit with use...driving me crazy.

Looks like the REAL culprit is just a bad case. <g>

Next stop, Scannermaster to see what I need to do.

1595. ProScan 2.1.0 Is Here

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-16 23:49:23 UTC
From: Bob Aune
Topic: 1595 Message: 1595

Added - RSSI Logging to the history grid.
Added - RadioReference - Import Control Channel Only option for Motorola systems.
Added - DMA Database - Sort database based on quick keys, alphanumeric, or system type.
Added - DMA Database - Band Scope options menu was missing.
Added - DMA Database - Private option to the systems settings for the BCD396XT and BC346XT.
Fixed - DMA Database - Location Info missing from groups for the BCD396XT and BC346XT.
Fixed - DMA Database - Audio Type incorrectly appearing in the channels grid for the BCD396XT.
Fixed - Lower CPU utilization.
Many more bug fixes and improvements.

Enjoy

Bob

Hi Bob,
I just tried ProScan, and it's pretty good, a bit pricy though. My only suggestion after a few minutes of logging is that on the logging the site be added so you know what site your hearing on trunk systems. I can recieve 20 sites at home off my tower and it would be helpful to know which site a TG is active on.

1597. 396XT Downgrade from 396T Ref Colorado P25

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-17 02:51:17 UTC
From: Douglas Groves
Topic: 1597 Message: 1597

The first noticeable difference is the sound quality. The 396T you can set the digital decode to Manual 8. That holds the sound steady and keeps the error rate at 0 or minimal. Why for the life of me Uniden would dumb down the XT and actually take option away is beyond me.

In programming different sites for each system ie. Weld causes you to miss a lot of traffic while it rotates and picks up and loses control channels each time it scans a different site.

The digital trunking priority is okay, but not as advertised. I read another post about the girlfriend working for animal control. The fact that it is not a consistent priority was not disclosed in the ads for this model.

I've read the owners manual and still can't figure out how to get the radio to display the fire tone out Hz, even while locked on the frequency receiving active tones.

Someone said that it is more sensitive, therefore, will receive signals stronger then the T. That is not my experience here in Colorado.

The P25 Adjust Mode works better for me on 1, which is no longer an option.

There are a couple more options, but not $500 worth. Those options should have been upgraded on the T instead of this.

I understand wanting to protect people from themselves, but if I don't hear that those option will be included in the first firmware upgrade, I'm going protect the scanner from my hammer and pack it in foam peanuts and ship it back for a refund.

1598. Re: [BCD396XT] ProScan 2.1.0 Is Here

Why would you think it's pricy I send 8 hours a day on this and all my time on the weekend. I don't think you realize $50.00 is just a small token for this. I would think that this benefits you more then me. I actually loose money as I turn down a lot of OT.
.
How would that work. Is it in the data stream from the scanner just the frequency?

That's great if your system is set exactly to spec. Unfortunately, many other systems are not set up correctly. If they were, the original setting of 8 would have worked flawless on all systems. Uniden is trying to make it automatic. There are a lot of people who have no idea what the setting does.

> In programming different sites for each system ie. Weld causes you to miss a lot of traffic while it rotates and picks up and loses control channels each time it scans a different site.

So set the sites to different SQKs and disable the ones not in your area. The other side of that coin (a recurring theme) is that with the old system you would miss TGs you want to hear because they were transmitted over the site the 396T was evaluating, and it wasn't a multi-site scanner like the XT.

> The digital trunking priority is okay, but not as advertised. I read another post about the girlfriend working for animal control. The fact that it is not a consistent priority was not disclosed in the ads for this model.

Can you be more specific? I bet you're reading into what is advertised.

> I've read the owners manual and still can't figure out how to get the radio to display the fire tone out Hz, even while locked on the frequency receiving active tones.

That's easy - set the A and B tones both to 0 and it will decode. I'm sure that's in the manual.

> Someone said that it is more sensitive, therefore, will receive signals stronger then the T. That is not my experience here in Colorado.

I haven't seen that either, but it's easy to test rather than making subjective comments like ours.

> The P25 Adjust Mode works better for me on 1, which is no longer an option.

Again, it would be ideal if all P25 systems were set up correctly. Minor differences that would not affect analog signals will affect P25 signals.

> There are a couple more options, but not $500 worth. Those options should have been upgraded on the T instead of this.

I bet someone who needed multi-site capabilities, FTO deocode, more channels, a backlight color other than blue, or any of the new features would not agree. If none of the new features are attractive to you, by all means stick with the 396T or 296D or 250D or whatever meets your needs.

> I understand wanting to protect people from themselves, but if I don't hear that those option will be included in the first firmware upgrade, I'm going protect the scanner from my hammer and pack it in foam peanuts and ship it back for a refund.

Nobody has made the 'perfect scanner' yet, and I bet they never will - espeailly the way communications systems are evolving with new formats and minor changes making big differences in signal quality, etc. But, if it's any consolation that's the same problem with any radios P25 was supposed to solve that to a large degree, but their fool-proof specifications didn't count on a bigger fool. Again, many systems out there are not within P25 spec, and some manufacturers are producing equipment that they "take creative license on" when it comes to the specs. Sooner or later they will be 'called' on it and sued, but that doesn't help us in the mean time. It also won't solve setup and alignment problems.

Joe M.

John, why would you think it's pricy. What do you suggest? You may not realize that I do send a lot of time on this, about 12 hours a day average. to give you guys the best. Butell cost more per scanner with out that many features and there scanner over IP cost thousands. $50.00 is just a small token for this. I loose money turning down OT for this. I don't mean to rant but when I work as hard as I do, hope you understand. I hear more comment that I can get more for this but I want to keep the price low.

How would this work? The TGID are not associated with a particular site The control channel frequency is reported from the scanner but more then one site can use the same frequency.

Bob Aune,
ProScan

Hi Bob,
I just tried ProScan, and it's pretty good, a bit pricy though. My only suggestion after a few minutes of logging is that on the logging the site be added so you know what site your hearing on trunk systems. I can recieve 20 sites at home off my tower and it would be helpful to know which site a TG is active on.

John,

ProScan 2.0 is logging the site already on both the audio logging and history logging tabs. I have Ohio MARCS programmed with two sites in the same system. One is labelled MARCS Green; the other is MARCS Richfield. I did logging for one minute on both sites. Both windows clearly show which site the transmission was on.

What Bob uses is the remote PC control protocol. That protocol returns the site/system/search name. For trunked systems, it returns the site name (text tag). The virtual display window follows the same rules as the radio itself. The only way to tell which site is currently being logged is to uniquely name the site in the radio.

1604. RE: [BCD396XT] ProScan 2.1.0 Is Here

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-17 04:55:11 UTC
From: SuperCraig
Topic: 1595 Message: 1604

Hey Bob,

I did a lot of research before choosing what software to use for my Uniden Scanner. There were SO many great reviews and hordes of people talking about how great your software is, that it was their choice to use and more than worth the cost. I was so convinced after comparing your features to the other solutions out there (and hearing all the people who swore by you and your product) that I didn't even need to take a trial of the software.

I happily purchased it day one. That was months ago and I don't regret my choice in the least. It is well worth the $50 and anyone that doesn't think so can go get the free ones and they'll get features you get in a free version. To each his own.

I know you worked your ass off to get this release out. You should be proud that you were one of the FIRST to even have any software for the 396XT. I could be wrong, but I think I heard recently that Uniden hasn't even released their software to support THEIR product and here you are rolling out a new version of yours when other software companies haven't even released their first version.

You've been working hard, you should be proud of what you've produce. Go celebrate. As you know the software world isn't changing, there's always something more to improve upon, it's a never ending game.

Sorry for my long rant, I just wanted to try to say something to remind you of what you already know, which is there are plenty of people who appreciate your product and your obvious commitment to its support as well.

You can, and should, be proud of your contribution. Focus on the folks that appreciate what you continue to offer: a great programming software, and exceptional levels of support and enhancements driven by customer experience. Being in the software world myself, I know that is something to be proud of.

SuperCraig

So if I want an advanced scanner with pretty lights I have to sacrifice audio (which was the original intention of getting it) quality because amateurs don't want the ability to fine tune their equipment to operate optimally. Also, because the radio techs that work on the Colorado P25 system are too good at their jobs I have to suffer. Got it.

Nope, not buying it. I could take the T and instead of programming Systems by area, I could program systems by site. That would make it scan the exact same way that the XT does, at the rate it does, and listen to all the different TG's that one site may block. It's just a different way of doing the same thing. Now if the XT were scan the control channels much more rapidly showing the CC's cycling right below where it says ID Scan/ID Search without having to "re-connect" every time it went back and forth between CC's that would make it worth it.

http://www.radioreference.com/forums/uniden-scanners/145240-396xt-proscan-not-sure-how-program-priority-scan.html

There you go. Read all about it. Since my system is set up right this should work, but it doesn't. All it does is switch over during the delay period. It won't interrupt a current active TG.
>
> > I've read the owners manual and still can't figure out how to get the radio to display the fire tone out Hz, even while locked on the frequency receiving active tones.

I did find this one. You got me there. My radio is sitting silent and useless until a tone comes across. I would like to know if the display will retain the tone levels for any length of time or if they disappear as soon as the tones stop.

Again, I am at a disadvantage because everyone wants the scanner to do everything for them? I'm still not buying it. Their are dozens of different systems across the nation and only a moron would expect one setting to work for all. Those people need to stop breeding already.
>

Still not buying the multi-site thing which I stated above, could live without the one time I need to decode a signal, there are other "free" programs for that, extra memory is nice, but in a comparison I got a 1.5 TB drive for $150 at Walmart, flashing blinking multi-colored lights haven't impressed me since I was younger and in to all that mind altering stuff. I always have the new, top of the line, stuff. My expectation is for it to act better then the previous model, not worse. That's how capitalism works. Uniden lost sight of that with this things release. Someone was worried about making first quarters P(P&L) look good and forgot about the refunds that will show up on next quarters L(P&L).

No - Uniden simply wants to make their scanners as user-friendly as
possible, and I bet a lot of people did 'mess up' their decoding by
using incorrect settings. I agree that some form of 'expert' (GRE term)
settings would be nice. But, are we to suffer for the lack of being
adept by some scannists? Well, yes. Uniden wants to sell scanners, and
catering to the expert users with a product of this price range just
isn't going to work as well.

>>> In programming different sites for each system ie. Weld causes you to miss a lot of traffic while it rotates and picks up and loses control channels each time it scans a different site.

And it would use much more memory for the duplicate TGs. You don't have
to 'buy' that fact, as it IS a fact - believe it or not.

>>> The digital trunking priority is okay, but not as advertised. I read another post about
the girlfriend working for animal control. The fact that it is not a consistent priority

doesn't. All it does is switch over during the delay period. It won't interrupt a current
active TG.

Will read later, but what you want requires TWO receivers, and cannot be
done with one. You being an 'expert' user, you should already have
realized this. Will read the RR thread later.

>>> I've read the owners manual and still can't figure out how to get the radio to display
the fire tone out Hz, even while locked on the frequency receiving active tones.

It will retain them for the delay period you have set - a couple seconds
to infinite.

>>> Someone said that it is more sensitive, therefore, will receive signals stronger then
the T. That is not my experience here in Colorado.
>> I haven't seen that either, but it's easy to test rather than making
>> subjective comments like ours.
>
> I did see it, but it wasn't anyone official. Probably just someone talking out their you
know what.

Too bad GM won't build me a custom car either. Sometimes you have to
choose low cost or customization, and Uniden is marketing this scanner
to everyone, so some features will be a compromise.

As for the settings, IF these systems were set up correctly, one setting
WOULD work! That's why there are specifications you're supposed to follow.

>>> The P25 Adjust Mode works better for me on 1, which is no longer an option.

If everyone feels the same way, their sales will decline and they will react accordingly. But, if not everyone feels as you do, and I bet that is the case, then you will continue to see progress on the current trend. Again, you don't have to buy the multisite abilities - the benefit is clear.

Joe M.

1608. Thanks!

Usually I just lurk about. But recently having the urge to get back into my radio hobbies lead me to start researching gear again (the last scanner I bought was a RS PRO-34!). I have found this group to be most helpful and considerate in making the decision. I've enjoyed the respectful bantering of good and bad. Believe it or not, this has helped me decide on the XT. I'll order it tomorrow then start the imposing learning curve.

Thanks and kudos to all!

Here in ILL on the new statewide Starcom 700/800 digital system in my area the new "XT" is much better on decode and audio than my 396 "t" was....The sensativity is better and the speaker in the radio (XT) is fantastic...If it seems to have a problem decoding it seems like its rapidly finding the proper selection to decode and that also was on the old 396t=Auto 8....As mentioned by "Joe" i think different systems are set up different...Im hoping to go over to Indiana soon and give the "SAF T " system a try.....If the 996 "XT" is like the 396XT i may start selling off some stuf for a new purchase.....

I think I've had the same experience. It appears it searches the database for a match, and shows the first one it comes to. I noticed it had a talkgroup in the history tab from a system I wasn't scanning, then I noticed the TG # matched one that I was searching, but it chose the system before it in the database. My guess is that if Bob is aware of it, he's probably working on it.

Ahha. That's the one tab I ignore. I have an issue with this tab in that it doesn't log things correctly to begin with. Say you have two systems that have the same talkgroupID. One system's talkgroup you have tagged. The other is not, and that system is in ID SEARCH mode. ProScan logs the talkgroup from the unidentified system, but attaches the identified system's

info to it.

Gee Bob, you don't think that others don't put a lot into their software time wise and do it for much less, even free. I'm not saying that you have to give it away but $30 is much more reasonable. Not sure where you get the scanner over IP costing thousands as there are some again that charge very little. Those charging more are just getting a very few customers and charge way too much but then there is a sucker born every minute. At $30 you would probably sell twice as much and make more for your efforts. If your loosing $$ turning down OT that is YOUR choice, don't try blaming anyone else for that.....you sound like my GF in that type of argument. As for Butel. my feelings about Butel and Gommert are well documented and I won't waste a penny on his junk, been there done that. It never did work and he never came through on support. Oh, and you probably get a lot more sales if you had more than Paypal, Paypal is no ones pal!
As for how it would show the site, I don't know, I'm no programmer but others do show the site and obviously the scanner shows the site so there has to be data somewhere.....

John

1612. New Oner, BCD396XT, SE Michigan-Questions

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-17 17:06:25 UTC
From: car7858
Topic: 1612 Message: 1612

Hello, My name is Carl & I live in Chesterfield, Macomb County, Michigan. I just recently received this nice scanner as a gift but I am having alot of difficulty using it. I loaded Freescan .9 and I have Premium Membership with Radio Reference. I had downloaded the Macomb County Trunked Freqs I wanted when I clicked on the Erase all Settings tab in the upload box; Now, my scanner has none of the settings nor programs of any type in it and it won't accept uploads into the memory of the scanner. I get an error message that tells me my settings (apparently) in the scanner need to be reset/checked. My questions are these:
1. Is there a way to reset this scanner back to factory default?
2. Is there a Uniden site link that can restore the factory settings? and
3. How can I get the memory to accept the uploads from Radio Reference via Freescan?
I really am quite enthusiatic about learning how to properly use this scanner & I would appreciate any input from this group. Thanks.

1613. Welcome Email

For those of you who joined recently and received that rather odd email (about speculating elsewhere)...I set up the group months and months before the scanner was announced and put that message in place then. And completely forgot about it until it was pointed out to me today. Despite the message you received, you are free to speculate in this forum, as well. :)

1614. Re: [BCD396XT] ProScan 2.1.0 Is Here

John,
I'm not blaming anyone. I was just pointing out the time spent on making quality software. What other Computer Aided Scanning software has the features of ProScan? If I sold it for $30.00, you may say $10.00 is more reasonable. Of coarse I wouldn't be in business and there won't be ProScan. The sales are up so PayPal is not really a factor. PayPal is actually easy to use and seems most people use it. Less then 1% would sent a money order.

Bob Aune,
ProScan

http://www.proscan.org
Taking scanning to the next level!

Gee Bob, you don't think that others don't put a lot into their software time wise and do it for much less, even free. I'm not saying that you have to give it away but $30 is much more reasonable. Not sure where you get the scanner over IP costing thousands as there are some again that charge very little. Those charging more are just getting a very few customers and charge way too much but then there is a sucker born every minute. At $30 you would probably sell twice as much and make more for your efforts. If your loosing $$ turning down OT that is YOUR choice, don't try blaming anyone else for that.....you sound like my GF in that type of argument. As for Butel. my feelings about Butel and Gommert are well documented and I won't waste a penny on his junk, been there done that. It never did work and he never came through on support. Oh, and you probably get a lot more sales if you had more than Paypal, Paypal is no ones pal!
As for how it would show the site, I don't know, I'm no programmer but others do show the site and obviously the scanner shows the site so there has to be data somewhere.....

John

1. Check that the baud rate in the scanner is the same as FreeSCAN. Goto Menu - Settings - Set Serial Port and select the one you are using. Also make sure C-Ch output mode is turned off, goto Menu - Settubgs - Set C-CH Output and select Off. There is a key combination to reset the scanner to default but I cannot remember it right now.
2. Resetting it to default will bring back the factory settings. In addition, selecting "Erase all systems & settings" when you upload will do the same.
3.Once you have your scanner communicating, perform an upload selecting the systems you are interested in.

Hope that helps.

Thanks alot & I have already learned something from my first reply. This site will be extremely helpful for me & I'm certain many others. I'm looking forward to accumulating more knowledge about my scanner thanks to groups & fforums like this one.

PRO-34. That takes me back. I had one of those when I was a senior in high school. Then a PRO-43, PRO-92, BC-250D, BCD-396T, and now BCD-396XT. Still have the 92. It is a great radio.

I'm sure you'll be very happy with the 396XT.

Topic: 1597 Message: 1619

Still having problems with the tone out decode. I had my VHF two way scanning and the xt sitting next to it in "search mode" with 0.0 entered for both a and b. A tone came across on the VHF, so I look at the xt. It shows a signal on the signal meter, but no sound or a change in numbers for a or b. Each tone is approximately 2 seconds a piece. I now have it in "tone-out hold" mode. Will that work. The manual isn't that clear.

Nope, Tone Out Hold mode is for monitoring the channel - just as it is in the regular FTO mode in the XT and the T models.

To decode, you have to have it in "Tone Out Search" mode. If you're in HOLD mode, just tap the HOLD button (which you must have done to get it in Tone Out Hold mode in the first place).

I also recommend setting the duration to INFINITE so it doesn't automatically clear the tones out in a few seconds.

Oh - also make sure you're set to FM for the mode (not NFM, not AUTO).

One last comment. You said the duration is about 2 seconds each. That is common in two systems: Instalert (70s format that is very rare) and 2+2 mode where two tones are sent followed by two other tones (similar to DTMF, but using different tones). For this mode, the XT will *usually* decode the higher frequency tone, but it may not be reliable for this paging format, as only single tone formats (sequential tones) are supported, not dual tones sent simultaneous.

Joe M.

1622. Re: [BCD396XT] Re: 396XT Downgrade from 396T Ref Colorado P25

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-18 12:10:22 UTC
From: SRehm24416@aol.com
Topic: 1597 Message: 1622

I am new to this type of scanner and the learning curve is great, at least for me. After reading some of these posts I too find it odd (if it is really true) that one can not fine tune, if you will, a P-25 system. It is automatic right? I do see on my screen when I have the one set to monitor the settings ?? (not sure what I really just said) the numbers switching back and forth from 8 to 7 to who knows all while listening to one transmission. My error rate fluctuates but sometimes when I get zero error the other numbers are flip flopping. Is there no other way to set digital decode to match each system? I think I read that "most people don't know what that setting is anyway". I would forgo the flashing light setting to know how to set the digital decode. We have a manual, if printed, that is about 300 pages long. Why would it be so hard to learn one more instruction that could prove worthy? Not griping here, just suggesting.

So if I want an advanced scanner with pretty lights I have to sacrifice audio (which was the original intention of getting it) quality because amateurs don't want the ability to fine tune their equipment to operate optimally. Also, because the radio techs that work on the Colorado P25 system are too good at their jobs I have to suffer. Got it.
>

> multi-site scanner like the XT.

Nope, not buying it. I could take the T and instead of programming Systems by area, I could program systems by site. That would make it scan the exact same way that the XT does, at the rate it does, and listen to all the different TG's that one site may block. It's just a different way of doing the same thing. Now if the XT were scan the control channels much more rapidly showing the CC's cycling right below where it says ID Scan/ID Search without having to "re-con
nect" every time it went back and forth between CC's that would make it worth it.
>
> > The digital trunking priority is okay, but not as advertised. I read another post about the girlfriend working for animal control. The fact that it is not a consistent priority was not disclosed in the ads for this model.
>
> Can you be more specific? I bet you're reading into what is advertised.

http://www.radioreference.com/forums/uniden-scanners/145240-396xt-proscan-not-sure-how-pro
gram-priority-scan.html

There you go. Read all about it. Since my system is set up right this should work, but it doesn't. All it does is switch over during the delay period. It won't interrupt a current active TG.
>
> > I've read the owners manual and still can't figure out how to get the radio to display the fire tone out Hz, even while locked on the frequency receiving active tones.
>

I did find this one. You got me there. My radio is sitting silent and useless until a tone comes across. I would like to know if the display will retain the tone levels for any length of time or if they disappear as soon as the tones stop.

I cant stand the fact that I cant do anything to set the auto decode for the P25 system in the town next to mine.I live in South Bend IN. 3 miles away from Mishawaka IN.When I had my 396T I would set it to man 7 and err rates were at 0 to 3 now they run in the high 30s. Do you guys think the scanner is bad or is that what others are getting? Can you change the band plan to help? I have one week to send it back to get a new one. BTW I sold my 396T to get the XT to get rid of the motorboating and it did but now I got this problem Thanks for any help

Scott122964@....

I have the same problem with my 396XT and my P25 is conventional (not trunked). My 396T and 996T if on AUTO (with the latest firmware updates) has the same problem except like you I fix this by putting them on MANUAL 8 and my error rate is basically 0 to 1. However, with the XT this cannot be done and the error rate will hit triple digits and you cannot understand anything for several words until the XT final get around to decoding it. This is on a system that has a RSSI of 830 and I have tried attenuation with no change.

What I find interesting is that on AUTO all these radios seems to end up on AUTO 12 and this setting will occasional get an error rate of 0 with a setting of 12, but it cannot hold an error rate of 0 more than a second or two and then it starts to race around with audio effects that can be heard, yet with my 396T or 996T set on MANUAL 8 they hold the 0 error rate for the entire broadcast and the audio is nice and clear.

I just hope the next firmware update allows a manual setting as at present the main site I listen to is a bit fatiguing to listen to with all the garble and semi garbled broadcasts.

No, it won't. ARC has usually been one scanner = one program products. I
was glad to see ARC-XT will handle all 4 (so far) XT models: BCD396XT,
BCD996XT, BC346XT, and BCT15X.

You will need ARC-XT to program an XT scanner.

After the lack of support for the with previous product from Butel, I don't know why anyone would still purchase software from him knowing that other solutions exist that are much better and provide a much more personal support structure.

In the past, I solely used his products way back to the BCD250 units. No support, too many bugs, an short arrogant responses from Gommert forced me to look for alternatives.

I recently purchased a Uniden BCD396XT myself and chose to go with "PROSCAN", best of all it still support ALL of my Uniden models in one package and it works great...

Butel could follow the way of GM for all I care, their support sucks, their product is like earlier Microsoft products with all the bugs, why waste your money...

Just my two cents as I've been burned by Butel three times in the past!!!

Good luck with the new scanner, I love mine!

I recently purchased a Uniden BCD396XT myself and chose to go with "PROSCAN", best of all it still support ALL of my Uniden models in one package and it works great...

Butel could follow the way of GM for all I care, their support sucks, their product is like earlier Microsoft products with all the bugs, why waste your money...

Just my two cents as I've been burned by Butel three times in the past!!!

Good luck with the new scanner, I love mine!

MCH,
If you check the Butel website. The ARC250 software supported 4 scanners.

ARC250 is the most versatile software for your frequencies, trunk id's and trunksettings. ARC250-basic also includes a full remote control of your BC250/785D/296/796.

I always wonder why some folks say Butel has "burned" them and not provided support, and I (and many others) have had exactly the opposite experience. I have never had a problem with Gommert and he has fixed bugs if, when I find them.

Obviously...your mileage varied...or is it attitude that varied?

---------- Original message from "Jerry Dubzak - W2GLD" <w2gld@...>: ----------

After the lack of support for the with previous product from Butel, I don't know why anyone would still purchase software from him knowing that other solutions exist that are much better and provide a much more personal support structure.

In the past, I solely used his products way back to the BCD250 units. No support, too many bugs, an short arrogant responses from Gommert forced me to look for alternatives.

I recently purchased a Uniden BCD396XT myself and chose to go with "PROSCAN", best of all it still support ALL of my Uniden models in one package and it works great...

Butel could follow the way of GM for all I care, their support sucks, their product is like earlier Microsoft products with all the bugs, why waste your money...

Joe have you spoken to Gommert since his return from Dayton, if so when is he putting the ARC-XT on line for sale?
I also support Mr. "G" and have been a beta tester for several versions, unfortunately not the the "XT" I missed out.
Thanks.

Return from Dayton? As I understood it, he had some other business in
the States before returning. That said, I spoke to him at the Hamvention
a couple times at length, but have not spoken with him since.

As for his release date plans, I think he said, but it was not specific
and I don't recall exactly when he said it would be ready. I imagine
that depends on the time it takes to finish it. It still had a little
work to go based on the version he had at Dayton. Maybe weeks - maybe a
month - maybe more? Again, I would prefer Gommert tells you since I
don't recall and don't know exactly how much more work he had to do on
it. I know most (if not all) of the functions are 'in there', and it
just needs a little more fine tuning.

Software is not something that you can know when all the bugs will be
purged until they are.

On my 396XT here on the ILL-Starcom 700/800 Digital Statewide system i have NO problem decoding the system, i have watched the "AUTO DECODE" and its always going from Auto 7-8 and a reading of 0-5 on the decode...It never goes up to"30", it seems its always working to give the best decode and never hear any motorboating....Im 25 miles from the closest tower.....This is on both 700 and 800mgz towers...Its actually better than my GRE500 on decoding ....I have three conventional P25 freqys also and there decode is great...You may be in a bad location.....I have spoken with a Motorola tech here and he said since the "LEAVES" are back on the tree's they consume 800mgz signals which has actually forced them to make some adjustments on the ILL system.....

I have watched the AUTO DECODE go from 7 8 to 10 to 12 with s meter at 5 bars for two weeks and the err rates go into the 50s and higher on a 229ft tower 5 miles away and did a side by side test with a guys 396T today.His T with it set at man 7 made my XT with its AUTO DECODE look like a joke his err rates were 0 to 8 my XT floated up and down and then I lost traffic at 42 his was clear as a bell. But I sold my T to buy the XT and I will send it back pay the shipping go without a scanner for a week and try it again.

Just a thought, but since you are fairly close to the tower I am wondering if signal strength is playing a part. I have had all sorts of problems with analogue transmissions that stemmed from overload. Maybe you are experiencing something similar? Are you using an external antenna?

I read UPMans post on foliage and I can see how that can be a problem but not in a side by side test having said that the XT is a very nice scanner. I like that it got rid of the motorboating on the SAFE-T system thats the main reason I got it .The colors are nice for PD and FD alerts. When I get my new one I think the problem I have now will be fixed one way or another thank you UPMan and you other folks for the help with problems. I have ben buying bearcats for 20 sum years and they have ben good scanners why stop now.

I thought I was just dumb and hadn't figured out how to scan P-25 systems properly. Maybe what I am hearing, and seeing on the screen, is not supposed to be there. Sometime I can have good reception but other times, in perfect non windy and non foliage blocked days, have terrible reception. I can get "auto" readings from 5 to 15 in?as little as 15 seconds or so.?Digital is new to me. Is this not what I am supposed to hear?

?

Do you guys think the scanner is bad or is that what others are getting? Can you change the band plan to help? I have one week to send it back to get a new one. BTW I sold my 396T to get the XT to get rid of the motorboating and it did but now I got this problem Thanks for any help
>

Scott122964@....

I have the same problem with my 396XT and my P25 is conventional (not trunked). My 396T and 996T if on AUTO (with the latest firmware updates) has the same problem except like you I fix this by putting them on MANUAL 8 and my error rate is basically 0 to 1. However, with the XT this cannot be done and the error rate will hit triple digits and you cannot understand anything for several words until the XT final get around to decoding it. This is on a system that has a RSSI of 830 and I have tried attenuation with no change.

What I find interesting is that on AUTO all these radios seems to end up on AUTO 12 and this setting will occasional get an error rate of 0 with a setting of 12, but it cannot hold an error rate of 0 more than a second or two and then it starts to race around with audio effects that can be heard, yet with my 396T or 996T set on MANUAL 8 they hold the 0 error rate for the entire broadcast and the audio is nice and clear.

I just hope the next firmware update allows a manual setting as at present the main site I listen to is a bit fatiguing to listen to with all the garble and semi garbled broadcasts.

From: shelleysh1@att.net
Topic: 1625 Message: 1647

I agree, Don. I have used Gommert's software from the beginning. I don't want this to become a flame debate on Gommert (which some will do if given the chance). I also use Proscan which Bob has done a good job with and it's *excellent* software for the $$! Where else can you get scanner over IP capabilities for that price?? And Assaf's freeSCAN is awesome for a free program (and I personally think everyone who uses it should definitely send in a donation). Obviously, I've used all three and, for various reasons and capabilities. But my software of choice has always been Butel and it will continue to be. There never has been and never will be one piece of software which pleases everyone! That's why there are many of them. Some people have good experiences with one and bad with another. I've consistently loved working with the ARC software for many reasons. And, as I said, I very much like Proscan and freeSCAN. Each has its own set of features, quirks and ways of handling our radios. Each has features some of us will like better than others. Some people may feel one is supported better than others. Personally, I choose not to slam a piece of software but to advise someone to look at all three! The two pieces which are not free have trial periods which allow a potential buyer to try them out and see how well they fit one's needs.

Shelley

USB driver for the Uniden USB-1 cable or are you using an adapter cable?

You need to get a driver specific to your adapter. If it is the USB-1, then the drivers are at:
http://www.uniden.com/my/downloads.cfm?product=USB-1 (you'll need to log in there before the link will work).

If it is some other adapter, then you need to get it from that adapter's mfr. The driver is for the cable, not for the scanner (which is RS232).

I don't know how to be more specific - that's the exact wording.

Now when I try to open it, it says it can't open it because it needs to know what program created it. When I ask it to search automatically, it says it doesn't recognize this file type.

I got the wording. But specifically where in the process does that error message appear? You only indicate that it happens "When you try to run the update" but that leaves a pretty wide field for diagnosis.

Also, if rewrite your message below and replace the word "it" (9 instances) with what you specifically mean.

From my quick Google, this sounds like it might be a file decompression issue, but that should have happened before you ever got a chance to run BC_VUP (and would indicate a problem that probably has nothing to do with the update itself...).

The ZIP SFX (Self-extracting) file is corrupted:

Probably a CRC value error. When it compares the download of itself to the Error Correction (CRC) value originally created at the beginning of the download.

It can be something wrong on your computer such as a disk problem or memory problem.
It can be a network problem.

Before trying again - clear your browser cache and restart your browser (just to ensure you are getting a fresh download)

Try without download accelerator?

Are you using a specific ZIP/UNZIP program?

Try down loading and storing it to a different location on your computer.

Thanks.......and Keep Safe!

You don't open the extracted file, you use BC-VUP and when asked for the firmware you point to the file you extracted from the zip file.

FYI. The current version, 2.0.0.7, worked fine here on Vista Ultimate 32 bit.

Worked perfectly for me on Windows XP Pro SP3 using a real serial port
and cable.

Since that worked so well, I finally updated my BCD396T from 1.17.13 to
3.02.02. That also worked fine. Maybe tomorrow I'll update the BCD996T
since I'm on a roll... Hmmm, how about the BC796D???

Did you try putting a wildcard ".0" in a channel and then locking it out?

Are you using a serial, or USB/serial adapter, or Uniden USB-1 cable?
It works fine here with Win Vista SP1.

Yes, I'm using the standard Uniden cable and the correct drivers. It communicates fine with the scanner software on my PC. It's just that the latest version of BC_VUP fails. Dropping back to the older version is what UPMan recommended when I had this problem with my BCD396T firmware update and t works here as well. Just passing on a tip in case someone else has a problem.

From: Stinger Ohio
Topic: 1648 Message: 1671

I believe you must shut the I-call off per system. So you would have to go into the system programming. Menu+vol push, select the system, Edit system options, scroll to Edit, I call, then disable, scan
that "should" do it. I think
Jeff

Depending on the browser you used to download the file it could have a ".zip.htm" extension, meaning that the file will not unzip as it was saved. Check to make sure the file extension says ".zip".

1680. newbie question

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-21 16:30:36 UTC
From: lancebakken
Topic: 1680 Message: 1680

Currently I'm using a Uniden BC80XLT to listen to local emergency transmissions. I live in the Seattle area (Snohomish County), and I know they use a Motorola trunk system. I have a basic understanding of how trunking works (or at least I think I do). From what I've read, a Uniden BCD396XT is designed to operate with this type of system. Basically, my question is: how would my scanning experience be improved with a trunk-tracking scanner? Would the primary benefit be that I could punch in a particular talk group (for, say, the Mukilteo PD) and it would follow that talk group as the system assigned different frequencies? Would there be any difference for general scanning, where I'd be browsing fire, police, etc? Thanks, LB

While a lot of additional features come along for the ride, I'd agree that the primary improvement in your situation would be the ability to follow single conversations on trunked systems.

There is more flexibility in programming (as many channels per system as you want vs. fixed bank sizes), alpha tagging (so you don't have to remember what frequency goes with what agency), and bunches of other stuff you'll like, too, once you get over the learning curve.

From: trainman98310
Topic: 1683 Message: 1683

Hopefully I'm overlooking this in the manual, but it sure would be desirable to have the capability for programming a "one button" mute function on the keypad. This would assist if you needed to stop listening for a short period for a phone call. You could just press a button, let's say for discussion, the keypad number 3, and press again to resume. Sure would save picking up the receiver and adjusting volume.

1689. [BCD396XT] Palm Beach County Florida programming

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-22 18:55:39 UTC
From: Jeff Miller
Topic: 1689 Message: 1689

I have all of Palm Beach County Florida Trunked system programmed into my scanner. I receive the Sheriff's office, Riviera Beach and all fire comms from the county. I am unable to receive Boca Raton and Boynton Beach and Delray Beach comms. They are listed as digital on a FLorida info page yet PBC is listed as Analog-Digital on Radio Reference. I am using a 396XT, USB-1 cable, and Proscan 2.1 to program it

Please Help
Thanks
Jeff

Not familiar with that specific system, but from looking at the database, it is likely that most Boca Raton comms are going to be on the Boca Raton site. Similarly, Boynton Beach and Delray Beach have their own sites.

Do you have those sites programmed / enabled? If so, press HOLD when the scanner is on the site and make sure you can hear solid copy of the control channel's "motorboat" noise.

1691. Dodger Stadium

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-22 19:40:57 UTC
From: tuckyguy08
Topic: 1691 Message: 1691

I am going to Dodger Stadium and am trying to program the following frequencies into my BCD396XT scanner.
I am not really experienced programming a new system, normally get my systems from Radio Reference already setup.
FreeSCAN is asking what type of system (Convential, Mot 800Mhz Type 1, Mot Type II/P25, EDACS Narrow/Wide, EDACS SCAT, LTR, P25 Standard (Digital XT), or P25 One Freq Trunk (Digital XT).

I need some advice as to what system to start with. Can someone advise me based on the information below?

451.3250R D223 Primary channel, Security, First Aid, ushers
451.4000R D026 "Guest Services"
451.7875R D343
451.8625R D116 Elevator channel
451.9125S D243 Maint., kitchen
451.9375S
451.9625S
451.9875R D465
452.0500S D664 Foods, wine, beer
452.0875S
452.1125S
452.2125R D654 "2" First Aid
452.3500S
452.4000S
452.6500R D134 VIP channel
452.8500R D131 "CP" Parking lot security

Thanks in advance,

tuckyguy

Where are you located? There is a lot of traffic on that area, and its a rather large area as well. I never heard delray/boynton/boca until I got down around lw/atlantis. When I say traffice I mean rfi. I was using a 396t at the time, my psr-500 was a little better.

This appears to be a list of individual conventional frequencies so
the system should be entered as conventional.

1703. Re: [BCD396XT] Palm Beach County Florida programming

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-22 20:51:06 UTC
From: Jeff Miller
Topic: 1689 Message: 1703

I don't pick up the control channel for either Delray or Boca, yet I pick up the signal for Riviera beach Fla which is farther north. I will wait until I get my 800Mhz 2.5 db gain antenna on Tuesday and see what happens. I have also joined the SEFlorida group on yahoo as recommended by another user and maybe they'll have updated info for Boca etc.

Not familiar with that specific system, but from looking at the database, it is likely that most Boca Raton comms are going to be on the Boca Raton site. Similarly, Boynton Beach and Delray Beach have their own sites.

Do you have those sites programmed / enabled? If so, press HOLD when the scanner is on the site and make sure you can hear solid copy of the control channel's "motorboat" noise.

Subject: [BCD396XT] Palm Beach County Florida programming

I have all of Palm Beach County Florida Trunked system programmed into my scanner. I receive the Sheriff's office, Riviera Beach and all fire comms from the county. I am unable to receive Boca Raton and Boynton Beach and Delray Beach comms. They are listed as digital on a FLorida info page yet PBC is listed as Analog-Digital on Radio Reference. I am using a 396XT, USB-1 cable, and Proscan 2.1 to program it

Please Help
Thanks
Jeff

I have been seeing incorrect PLs logged on conventional channels - PLs logged for conventional channels for which no PL is set and for which no PL is appropriate. I was assuming that this was a problem with the software rather than the radio and its firmware. Is it possible that this is related?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-22 22:49:44 UTC
From: JAN FINE
Topic: 1689 Message: 1705

My guess is what has already been said here by Paul.
Boca runs its PD, FD, LG on the Boca site. So if you are listening to Site #1 on the Palm Beach County system you will not hear them.
Same with Boynton Beach. They operate on their own site. Same with Delray Beach. They operate on their own sites. Originally the three had their own system but now are sites on the Palm Beach County system. On site # 1 you will hear everything in Palm Beach County except Boca, Boynton, and Delray. By the way Boca, Boynton and Delray LG run analog. PD & FD run Digital. Also on site # 1 most communications are Analog. Except for the low number talkgroups. These are Digital for things like SWAT etc.

Please feel free to join my group.
www.yahoogroups.com
SEFLORIDA

Or email me if you want to join and I will add you to our list.
We have over 500 very knowledgeable people including the system operator for the Palm Beach County system. Many people that have been into scanning for 30-40 years and also beginners that have been into the hobby for less than 1 year.

I am near Deerfield Beach Fla. A couple of miles south of Boca Raton. I do receive the PB Sheriff's office in Riviera Beach which is farther north than Boca.

Dodger Stadium is conventional. I have a system file for it in Uniden UASD format for the 396T (which FreeSCAN can import).

1708. first time useage issues

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-23 13:08:17 UTC
From: stinger325@sbcglobal.net
Topic: 1708 Message: 1708

I own the 396t, and after playing with the xt for a day Im ready to take it back. This is more complicated than programming a real radio for a trunking system. I have the Freescan software and am still not having much luck. I cant get the service searches to stay locked out, quick keys dont work like they should. Im pulling my hair out, Id love to use it but its overly complicated uniden...really missed the mark on the user inteface here. Very dissapointed.

From: Paul Opitz
Topic: 1708 Message: 1709

The 396T and 396XT work nearly the same for the functions you mention.

To stop the service and custom searches from scanning, lock them out (F+L/O, L/O while on the search). If they are unlocking after updating the scanner from Freescan, then you need to lock them out in Freescan.

There is little difference in how SQKs and GQKs work (all I can think of is that SQK can affects individual sites instead of complete systems for multisite system types)...but a specific example of what you are having problems with might yield some useful advice.

RB is on the 10 site county system. The cities are on their own single transmit sites. You will hear Sheriff/Fire units as far away as Belle Glade because of the 10 site simulcast really great system. I use it everyday.

From: Stinger Ohio
Topic: 1708 Message: 1713

Nah, I have spent enopugh time fooling around with this for two days. Its frestrating to use, the decode motorboating isnt any better than on the 396t...I thought that was fixed. Way I see it is that only thing Id be gaining if I kept it is NAC decode or NAC squelch. Besides a large headache every time I tried to use it. Its going back, I'll stick with the "other brand" and 396t for now untill this is realy ready for the public. Thats alot of money to ask of someone when its this difficult to use and irritating to listen to.

The 396T and 396XT work nearly the same for the functions you mention.

To stop the service and custom searches from scanning, lock them out (F+L/O, L/O while on the search). If they are unlocking after updating the scanner from Freescan, then you need to lock them out in Freescan.

There is little difference in how SQKs and GQKs work (all I can think of is that SQK can affects individual sites instead of complete systems for multisite system types)...but a specific example of what you are having problems with might yield some useful advice.

I own the 396t, and after playing with the xt for a day Im ready to take it back. This is more complicated than programming a real radio for a trunking system. I have the Freescan software and am still not having much luck. I cant get the service searches to stay locked out, quick keys dont work like they should. Im pulling my hair out, Id love to use it but its overly complicated uniden...really missed the mark on the user inteface here. Very dissapointed.

Exactly what system are you trying to monitor? If it's the MARCS system,
have you set it for DIGITAL ONLY? If not, do that and all your
motorboating problems will 'go away'.

If it's not MARCS, what system is it?

Well, I'm sorry you wouldn't share what the difficulties were. I'm sure you know from learning the 396T's operation that once you get past the learning curve, things get much better (and going from the 396T to the 396XT is a very small step in learning).

If you do keep it for a while longer, set your digital channels to Digital Only. Motorboating should end.

1716. toggling alpha tags

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-23 20:16:47 UTC
From: Dennis Biagioli
Topic: 1566 Message: 1716

Pardon me for probably being the village dummy today but I simply cannot find the way to toggle between the channel alpha tags and the frequency itself showing in the display window.

This feature was available on the 396T as described in the 396Tmanual as:
Toggling Channel Alpha Tags
To change the display so the channel and frequency or
Talk Group ID appear instead of the alpha tag, press [FUNC]
+ 5.

Please tell me that the this capability wasn't simply discarded with the new 396TX. So, how is it accomplished?

Feeling silly, but unable to find it.

Denny
(KE9VG)

You can cycle through the 3 available display modes by pressing HOLD, then FUNCTION + 6. Rather than replacing the alpha tag, the frequency is available below the channel alpha display.

Ah, the group is equally as good as the radio itself (and I promise not to refer to is as the 396TX again). My thanks to you, Paul, and the several other members who were so kind. You're all correct -- a great feature that I simply overlooked. Many thanks!

Try exporting from Win96 (or just open the files in Excel if you can). If they do show up there in some kind of reasonable format (column aligned or something) then try grabbing sections with EZ Grab in Freescan. Might save some typing.

I have all of Palm Beach County Florida Trunked system programmed into my scanner. I receive the Sheriff's office, Riviera Beach and all fire comms from the county. I am unable to receive Boca Raton and Boynton Beach and Delray Beach comms. They are listed as digital on a FLorida info page yet PBC is listed as Analog-Digital on Radio Reference. I am using a 396XT, USB-1 cable, and Proscan 2.1 to program it

Please Help

Topic: 1708 Message: 1724

Paul, I explained what I could tell you as I understood it. If it was as similar as the t then I wouldnt be as upset.

The service searches no mater what I do WONT go away. Even though they say locked out they pop right back after it scans through say MARCS. Using the software, it says lock out in the dialog box. The motor boating is happning on MARCS as it always has, its not any beter than it is with the t. My other guy scanner hardly ever dose this, and subsiquently decodes the data down into the noise floor much better than the 396t/xt dose. If it (396's) looses part of the data stream it breaks squelch and treats it as analog, hence an unpleasent listening experience. I do not seen any amenities in the programming for a trunk system for digital only. I assume this is because some systems run mixed mode. But it would be nice to fix that.

I have to say also Paul that I dont enjoy the navigation menu of the manual on CD. I understand it from a money and buisness perspective however a PDF copy of the manual would have been nicer In my opinion, and would be everything that the HTML guide is or should be. Its almost like trying to opperate the radio itself. I can't imagine being a first time buyer and trying to follow it. Especially since there is no glossery of terms on some of the features like TGQK. Assumes you know what a TGQK is and how it is supposed to fit into the scheme of things as a feature.

Good parts are NAC squelch and decode search, intuitive AGC settings menu, Analog/Digital strapping of a "channel", the multi color display is nice so you can see it better.

Paul I appreciate your position and taking alot of your own time to follow up with the end users here. I have been in the radio buisness a long time and worked with alot of things RF. I am mearly one small voice of many people that aren't green when it comes to these things. While there are some very nice features of this platform, I think it needed more beta testing before releasing it. In my case, Im just not getting that much of a better radio for the money as compaired to my t. So I cant justify a 500 dollar exspence at this time for 3 or four more wistles. This all would have been nicer to just flash to the T.

I should clarify about the PDF, it is HTML style in the pdf that is somewhat difficult as you can get lost easly in the menue. Sorry about not making that clear in the previous. I have in the Freescan found two of my errors that I could not find/figure out from the face of the radio.

Service search is now locked out and appears on a different screen in the software than the "custom search" and you must use the drop down box and select lock out for each one. Still unknown why it wouldnt work from the radio end.

Also found the menu for digital system in a drop down dialog box, however selecting that option now I hear nothing on MARCS.

Again, if it's MARCS then you should never hear motorboating if it's programmed correctly. Program it for DIGITAL ONLY. That is the fix, so no other fix is required beyond proper programming.

On the searches, are you PERMANENTLY locking them out or TEMPORARILY locking them out? You have to press FUNC then hit the L/O key TWICE to permanently lock them out.

It doesn't need more beta testing, as every complaint you have is user error. Hate to say it, but it's true based on what you're saying is happening.

From: nocreativety
Topic: 1708 Message: 1727

Are you using version 0.9 or higher of FreeSCAN? Make sure you are using version 0.9 or higher, I think earlier versions might have had an issue with some service search settings on the XTs. Also check to make sure they are locked out in Set Scanner Options underneath the Service Search tab. When you upload, "Send scanner settings" has to be checked for this to work.

From: Lucretius
Topic: 1728 Message: 1728

I've owned the BCD396XT for over one month. Installed FreeScan .8E as soon as I got the scanner. Searched and found a file for upload to the scanner from someone in the same area. Updated this by connecting FreeScan to the Radio Reference database. Already installed one firmware update. I've learned through this forum about the "Use Motorola End Code" setting to reduce squelch tail. Upgraded FreeScan from .8E to .9A. (wow!). The scanner is working great.

Many thanks to "nocreativity" (Assaf), "Uniden UPMan" (Paul) and the BCD396XT group.

Yes it was perminate lock out, and it dosent work right. It wouldn't lock out from the radio leypad.
 MARCS was programmed in here from Uniden so your telling me that they dont know what their doing based upon your prior commentary. So since you say they didnt do it right, how shoud they have done it Joe?

Joe, I unlike you dont hate to say it...if you talked to me like that in person, youd have a broken tooth.

Thank you for your input but your attitude is unnessisary

Again, if it's MARCS then you should never hear motorboating if it's programmed correctly. Program it for DIGITAL ONLY. That is the fix, so no other fix is required beyond proper programming.

On the searches, are you PERMANENTLY locking them out or TEMPORARILY locking them out? You have to press FUNC then hit the L/O key TWICE to permanently lock them out.

It doesn't need more beta testing, as every complaint you have is user error. Hate to say it, but it's true based on what you're saying is happening.

Reminds me of the bit from the movie *Stripes*, what with the "broken tooth"
comment and all!

Psycho: The name's Francis Soyer, but everybody calls me Psycho. Any of you
guys call me Francis, and I'll kill you.

Leon: Oooooh.

Psycho: You just made the list, buddy. And I don't like nobody touching my
stuff. So just keep your meat-hooks off. If I catch any of you guys in my
stuff, I'll kill you. Also, I don't like nobody touching me. Now, any of you
homos touch me, and I'll kill you.

Sergeant Hulka: Lighten up, Francis.

Too funny! Lighten up, Stinger!

There was little attitude in my last post aside from a reaction to your claims that the functions don't work correctly on the scanner because *you* cannot get them to work correctly. I was emphasizing that things must be programmed and performed properly in order to work correctly. That is a fact.

I was trying to emphasize the difference between temporary lockout an permanent lockout, as only the temporary lockout could make the service searches return as you say you're seeing. It works on mine, and it works on many other scanners I've seen.

As for the Uniden programming, well, as the original MARCS file was for the BCD396T which doesn't have the DIGITAL ONLY option, it's entirely possible that it does not include it in the OEM programming (which is hardly a fully featured programming solution, as it usually only includes dispatch TGs and usually does not have every option set).

Oh, and I DID tell you how to 'do it right' - program the channels as DIGITAL ONLY.

As for the service searches, FUNC followed by the L/O key TWICE will permanently lock out the service searches (unless you reprogram the scanner with software or manually unlock them on the scanner). This is not just pressing L/O twice (which will only lock out a single frequency), and it's not FUNC followed by L/O ONCE (which will temporarily lock the service search out). If you're not seeing the same results, then the only possible cause is that it's not being done correctly. I know - there goes another tooth.

I was countering your 'attitude' that it requires more testing on features that you seem to be the only person having problems with. As nobody else seems to have these issues, AND as you seem to believe it impossible that it could be user error, then there appears to be no way to help you.

Last, if you continue to threaten list members, you WILL find yourself off the list. As for you appreciating the help from me, don't. You won't be getting any more if your 'thanks' comes with threats. I was only trying to help you make your scanner work as you want it to.

Paul, Yes I am familiar with the 2 settings fro lockout on the service search, however when done from the keypaqd it did not lock them out. I had to use the software. This dosent bother me as I rarely use those for anything. Most of the time I already knw what I'd like to scan.

I still have concern that when I did make the change to digital only that it stopped hearing any traffic on MARCS. My 396t sat there and decoded everything.

Also noticed that the xt dumps any talkgroup that comes up as Encrypted and resumes scanning. Is that an undocumented feature or is this another issue? I know on the T it showed ENC and muted the audio after a few miliseconds.

> Thank you for your input but your attitude is unnessisary

Reminds me of the bit from the movie *Stripes*, what with the "broken tooth"
comment and all!

Psycho: The name's Francis Soyer, but everybody calls me Psycho. Any of you
guys call me Francis, and I'll kill you.

Leon: Oooooh.

Psycho: You just made the list, buddy. And I don't like nobody touching my
stuff. So just keep your meat-hooks off. If I catch any of you guys in my
stuff, I'll kill you. Also, I don't like nobody touching me. Now, any of you
homos touch me, and I'll kill you.

Sergeant Hulka: Lighten up, Francis.

Too funny! Lighten up, Stinger!

1735. 396XT Usage

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-25 01:21:50 UTC
From: dataman60435
Topic: 1735 Message: 1735

Took the 396XT today to NWCD-Arlington Hts ILL which is a rebanded digital-analog 3600 baud system, used the "custom" rebanding settings and the 396XT performed to perfection....No motorboating and great digital coverage...I also set one "custom search" with the rebanding settings for 851-855mgz and it caught the CC and decoded the system great....I listened to about ten different Starcom Towers in northern ILL and never had any motorboating or decode problems...This is a much better scanner than i expected and is now overwhelming my GRE500 on digital coverage especially in the mobile....This is because it does not overload near cell towers and the increased sensativity.....Gotta give this 396XT a "A+".....

Joe, Your right I don't need your help. There are plenty of perfectly qualified people here that can assist others. I would prefer you didn't interject for a change

Throw me off? Not before I knock down your fort.
Grow up, move out, and get some sun would ya, sheesh

Thanks for everyones input, however I stand behind everything I have said and am very entitled to my own pinion of the product. Its nice if you can overlook some of the shortcoming's. I wish everyone luck with yours, I'll be returning mine next week and wait for the 397 to come out.

There was little attitude in my last post aside from a reaction to your claims that the functions don't work correctly on the scanner because *you* cannot get them to work correctly. I was emphasizing that things must be programmed and performed properly in order to work correctly. That is a fact.

I was trying to emphasize the difference between temporary lockout an permanent lockout, as only the temporary lockout could make the service searches return as you say you're seeing. It works on mine, and it works on many other scanners I've seen.

As for the Uniden programming, well, as the original MARCS file was for the BCD396T which doesn't have the DIGITAL ONLY option, it's entirely possible that it does not include it in the OEM programming (which is hardly a fully featured programming solution, as it usually only includes dispatch TGs and usually does not have every option set).

Oh, and I DID tell you how to 'do it right' - program the channels as DIGITAL ONLY.

As for the service searches, FUNC followed by the L/O key TWICE will permanently lock out the service searches (unless you reprogram the scanner with software or manually unlock them on the scanner). This is not just pressing L/O twice (which will only lock out a single frequency), and it's not FUNC followed by L/O ONCE (which will temporarily lock the service search out). If you're not seeing the same results, then the only possible cause is that it's not being done correctly. I know - there goes another tooth.

I was countering your 'attitude' that it requires more testing on features that you seem to be the only person having problems with. As nobody else seems to have these issues, AND as you seem to believe it impossible that it could be user error, then there appears to be no way to help you.

Last, if you continue to threaten list members, you WILL find yourself off the list. As for you appreciating the help from me, don't. You won't be getting any more if your 'thanks' comes with threats. I was only trying to help you make your scanner work as you want it to.

If you're so unhappy with the 396XT, why would you think that you'd
be happy with the "397"?

Also why would you think that most people would want to help you when
you've threatened someone that tried to do so?

Dick

1738. Re: [BCD396XT] first time useage issues

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-25 02:59:55 UTC
From: Paul Opitz
Topic: 1708 Message: 1738

Dumping ENC is normal.

Permanent L/O being disabled is not normal (unless you've activated Key Safe mode...but if you can get into the Menu, then that isn't the case). Be sure you are doing FUNC + L/O, L/O and not FUNC + L/O, FUNC + L/O.

If by "make the change to digital" you mean that you programmed MARCS as a digital (P25) system, then that would be why you stopped hearing anything MARCS is not a P25 system. Although it does use P25 on voice channels, it is properly programmed as Motorola (MOT) system.

Subject: Re: [BCD396XT] first time useage issues

Paul, Yes I am familiar with the 2 settings fro lockout on the service search, however when done from the keypaqd it did not lock them out. I had to use the software. This dosent bother me as I rarely use those for anything. Most of the time I already knw what I'd like to scan.

I still have concern that when I did make the change to digital only that it stopped hearing any traffic on MARCS. My 396t sat there and decoded everything.

Also noticed that the xt dumps any talkgroup that comes up as Encrypted and resumes scanning. Is that an undocumented feature or is this another issue? I know on the T it showed ENC and muted the audio after a few miliseconds.

Just want to confirm that you are familiar with Temporary Lockout (a new feature on the XT). If you just press L/O once time (or FUNC + L/O) it activates temporary lockout for the channel (or system/search) . When you cycle power, the lockout is removed.

To permanently lockout, you press L/O two times (or (FUNC + L/O, L/O).

I do not recall the specific channel configuration options I set when putting together the MARCS system. Being mostly human, it is quite possible I did not turn DIGITAL ONLY on for some channels that should have had it.

Yes it was perminate lock out, and it dosent work right. It wouldn't lock out from the radio leypad.
MARCS was programmed in here from Uniden so your telling me that they dont know what their doing based upon your prior commentary. So since you say they didnt do it right, how shoud they have done it Joe?

Joe, I unlike you dont hate to say it...if you talked to me like that in person, youd have a broken tooth.

Thank you for your input but your attitude is unnessisary

Again, if it's MARCS then you should never hear motorboating if it's programmed correctly. Program it for DIGITAL ONLY. That is the fix, so no other fix is required beyond proper programming.

On the searches, are you PERMANENTLY locking them out or TEMPORARILY locking them out? You have to press FUNC then hit the L/O key TWICE to permanently lock them out.

It doesn't need more beta testing, as every complaint you have is user error. Hate to say it, but it's true based on what you're saying is happening.

Joe M.

You like to talk the talk, and I respect that you are showing some growing up in your replies, but your 'respect: give it get it' doesn't fly when you were the first one to make any form of threats. You should try to live what you're preaching. I *never* threatened you with bodily harm, so you can't blame your reply on the theory that you were just responding in kind.

As for the 'Not before I knock down your fort', if that is some threat to trash the list, it won't happen. Again, live the life.

A lot of people confuse confidence with cockiness. You're not the first person to get them confused, but you obviously have. But, I am confident in my answers and if you follow them exactly, or Paul's since he gave you the same ones, I'm sure the scanner will perform as it should. If it's not, I submit that it's not the scanner that is selectively ignoring your input.

Just so there is no confusion:

To lock out the service searches, while on that service search, press and hold the FUNC button then press the L/O key twice. If the FUNC key locks on, press it again to release the FUNC function.

To eliminate the motorboating on the MARCS system, set each channel to DIGITAL ONLY under the CHANNEL EDIT menu (or in the software which may be easier). If you do that, you should still hear any of the MARCS TGs (except the encrypted ones). It works. I've monitored MARCS within the last week and it worked fine.

Last, the scanner ignores encrypted TGs, so you seeing a flash of ENC followed by a resume in scanning is a feature. No sense in hanging on a channel you cannot hear.

Stinger, I'm really surprised at your attitude after several people have been so kind offering suggestions to possibly help solve your problems. I have come to the conclusion you are probably just trolling. No matter what anyone suggests you come back with a negative. Now, I'm going to offer my suggestion which I'm sure you will respect as much as you have everyone else's. Stop your bickering and return your radio. Just let me know where you retun it to so I can purchase it at a reduced price Hopefully, you haven't screwed it up too much.

Y'know we need to try to understand poor, confused Stinger.

Obviously, he is an over indulged 12 year old with limited communications skills, no ability to think critically and a childlike tenancy to hit out when anyone disagrees with him.

He needs help - lets be kind.

Derek

Stinger, I'm really surprised at your attitude after several people

have been so kind offering suggestions to possibly help solve your

problems. I have come to the conclusion you are probably just trolling. No

matter what anyone suggests you come back with a negative. Now, I'm going

to offer my suggestion which I'm sure you will respect as much as you have

everyone else's. Stop your bickering and return your radio. Just let me

know where you retun it to so I can purchase it at a reduced price

Hopefully, you haven't screwed it up too much.

From: ka9qpn@juno.com
Topic: 1742 Message: 1742

Got my radio two weeks ago. Being the Laziest Man Alive, I used FreeScan to program my radio. I've always liked the form factor and memory organization of the Uniden vs. GRE/RS, but I always perceived the latest GRE/RS as having a slightly better receive and P25 decode (NOT due to the larger speaker!). No more. The new radio is everything that I wanted such a device to be, and I find myself leaving my GRE/RS scanners on the shelf in favor of the new radio when I go out on weekends and listen all day. IL StarCom, IN SAFE-T and CO's P25 system are all handled with very few trips underwater, as long as I do my part and stay within range.

Bonus: I mentioned a minor issue with FreeScan on this list in passing. To my utter delight, it was addressed in 0.9! Thanks, Assaf! And, even though I have not required his assistance, thank you Paul Ovitz for making yourself available here. You don't have to do this, and I'm sure that you have real work to do. Or family/fun stuff. And thanks to the moderator(s) for pulling this amazing group together. Your tolerance is near that of Christ.

Wow! This was a quite different digest than usual!
First, let me add my compliments to Paul and Uniden: thank you for an excellent product. I bought a PRO-106 while waiting for the XT to come out and sold it about a month later. It was cumbersome to use and even using ARC500, very difficult to program, at least for me. Not so with the XT, which brings me to the second part of the "team," Assaf's FreeSCAN: a fantastic program! Makes using the XT a breeze and I won't be going to another program for this radio.   Thank you both for your efforts!

As for the other major "issue" of the digest.... there's a very steep learning curve with many of today's electronic devices. You either get it or you don't. If you don't, take the item back and spend your money on something less stressful like a weekend at the beach. :)

From: flathatter_fa18
Topic: 1745 Message: 1745

I just bought a BCD396XT with a DC1001 car lighter adaptor. If my batteries are already charged, and I decided to use the DC1001 adaptor in the car to power the 396XT, is that going to overcharge the batteries, or is there a setting on the 396XT that one has to select to prevent this?

Thanks for any info you may have.

Better yet, let's let the matter drop. He has stated his intentions to return his scanner, so there is no point in letting the thread fester. The solutions to his problems were posted many times, so it's doubtful any further posts will serve any purpose.

Yes, overcharge is possible. Below the second (middle) cell, there is a switch. Switch it to the ALK position and it won't try to charge the cells. I would also recommend a dedicated NiMH charger to charge your cells.

Topic: 1742 Message: 1748

I, too, got mine two weeks ago after my Pro-96 ended up "missing in action". The FreeScan software made it easy to program my 396XT as I was able to import the ARC996 "code plug". The sound quality of the 396XT over the Pro-96 is like a Porsche vs. a Beetle. Reception is also hands down where with my Pro-96, I couldn't pick up my county's DTRS while in the basement and the 396XT seems to have no problem with it. Now, with the FreeScan, I can literally download my 396XT code plug into my 996 in my truck!

Now, if the next firmware will show user id's . . . . J

What about changing the charge time? See page 104 of the manual;

Set Charge Time

This option can be used to set the battery charge time. Press the number keys to enter the charge time from 1 to 16 hours.

Joe:

Thanks for the info; moving the switch to ALK (and leaving it there) seems like a fool proof way to ensure that the batteries do not get overcharged. I normally use hybrid Ni-Mh batteries.

I have a Maha and also a LaCrosse battery chargers; I plan on charging a spare set of batteries while running the scanner (unless I'm mobile, and I'll save the battery power by using the DC1001 car adaptor).

Yeah, but what good is a weekend at the beach without a scanner? ;-)

Scott

In a message dated 5/25/2009 5:10:19 P.M. Eastern Daylight Time,
kb0vof@... writes:

Wow! This was a quite different digest than usual!
First, let me add my compliments to Paul and Uniden: thank you for an
excellent product. I bought a PRO-106 while waiting for the XT to come out and
sold it about a month later. It was cumbersome to use and even using
ARC500, very difficult to program, at least for me. Not so with the XT, which
brings me to the second part of the "team," Assaf's FreeSCAN: a fantastic
program! Makes using the XT a breeze and I won't be going to another
program for this radio. Thank you both for your efforts!

As for the other major "issue" of the digest.... there's a very steep
learning curve with many of today's electronic devices. You either get it or
you don't. If you don't, take the item back and spend your money on
something less stressful like a weekend at the beach. :)

1755. Help with startup approach to programming a new BCD396XT

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-26 16:40:54 UTC
From: Roger Davis
Topic: 1755 Message: 1755

I just bought a BCD396XT and will have it shortly. There seem to be MANY approaches to programming it. It seems that I can possibly download a file using freescan from radioreference.com if I pay for a preferred membership. It seems that maybe I can enter my latitude and longitude somehow to get local frequencies. And I'm sure that I can enter the frequencies manually. I'd prefer a download and live near the Worcester, MA area. Although I'm a newbie on scanning I have a programming background and am willing to tackle this comprehensively. I hope I posted this in the right place, if not I'm sure I'll find out fast.

1756. Re: [BCD396XT] Help with startup approach to programming a new BCD396XT

Topic: 1755 Message: 1756

Well, the approaches are not unlimited...but close. How you program it will depend primarily on how you will be listening to it. Your idea to start with a RadioReference d/l is a good one...and still gives you a lot of flexibility in design. Until you start stumbling a bit I can't offer too much in the way of specifics, but I would certainly recommend you read through some of the articles at http://info.uniden.com/twiki/bin/view/UnidenMan4/ScannerManuals#Other_Resources. Once you have some specific questions (don't worry, everyone does at first) don't hesitate to come back to the forum for answers.

First, welcome.

Second, I predict you will be very happy with the scanner.

Third, IMO/YMMV, trying to program this radio (or any of its kin) manually is going to do nothing but wear the flesh off your fingertips and the paint off the buttons. I recommend using either freeware or trialware (currently, FreeScan or ProScan) and spending $15 or whatever it is now for a membership in RR. However, before you do that -

Fourth, I'd also recommend visitng the MA section here and scannewengland.com, where those of us who live in MA can probably provide you with a file that will give you a huge headstart. I'm a little east of you, so I don't have a whole lot of your local systems in my memories, but I do have some. I can send you my current file, fwiw, if you can get attachments at your email address.

John Newell

From: Richard A. Victor
Topic: 1755 Message: 1758

I would suggest the Freescan and RadioReference premium membership approach as being the easiest. The data on RadioReference is available without charge, but the premium membership allows you to use programs such as Freescan to download the data rather than having to manually key it into the program. Once you've got the data into Freescan and have it arranged the way you want it, you then transfer it to the scanner using the data cable that comes with the scanner. One thing to be aware of is that the included cable requires either a serial port or, if your computer doesn't have a serial port, a serial to USB converter. Uniden sells a cable which has the serial to USB converter built into the cable. If you use a serial to USB converter or Uniden's cable which includes the converter, be sure to install the driver that's appropriate for your converter.

Here are links to two pages of RadioReference data which appears to be related to your location.

http://www.radioreference.com/apps/db/?ctid=1226

http://www.radioreference.com/apps/db/?sid=168

Hope you enjoy your new scanner.

Dick

You can copy &Paste from RadioReference using EZ-grab in freescan. May take little longer but it's free.

Be sure to set the delimiter to "space" in EZ-grab.

1760. Uniden Parts Frustration

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-26 21:06:11 UTC
From: Bob Arenella
Topic: 1760 Message: 1760

Well, here I am, on hold, AGAIN. Multiple phone calls to Uniden Parts, dropped call, on hold more than 2 hours, and that's just today. I'm trying to order a belt clip hanger. Now I'm told that it's on back order for at least a month. Over two months ago, I ordered a front case half for my 396T. I was told it would be available in early June. Now they tell me late July. I've got more than $1,500 worth of uniden scanners on my desk and UNIDEN can't supply me with the parts I need. Arrrrrrghhhh.

It gets better.....the first time I ordered the belt clip hanger assy, I received a.....belt clip. Close, no cigar. Is anyone else having problems ordering parts from Uniden? Anyone have a spare belt clip hanger assy and / or a front case half that they could sell me ??

Upman, don't mean to rag on Uniden, but what's the story with the parts availability ??

Rob,
Frustrated 246T, 396T, 996T and BCD396XT owner

Well, the answer to that is: It depends.

That might work for you, or it might be better if you program the sites you normally get best reception from at your location to their own SQKs (so you can easily turn off the ones you cannot get quality receive on...).

If you are just passing through the area, then putting them all on one key will probably be OK (but non-optimal...if you were hanging around the area then you'd want to get a bit more granular).

Of course, the "gold standard" would be to program the latitude, longitude, and acceptable reception range for each site and use a GPS to control which ones are locked/unlocked as you pass through.

From: shelleysh1@att.net
Topic: 1765 Message: 1772

Hi Robert!
I use one of my 396XTs in my car at all times. I have it positioned so that it faces me and, at half-volume, it's plenty loud! It's connected to a remote head so I don't look at the radio itself, but I can easily reach it if I want to either pause it to listen to something going on or to temporarily lockout something else. I do know, from others in the group, that if the speaker isn't facing you or "out in the open" it may be more difficult to hear. But I've found it to be very loud and clear! For me it's simply how it's positioned in my car. I'm sure others will have input for you on this as well. Enjoy it!!
Shelley

That message means that you don't have any systems (scanner doesn't have banks) enabled for scanning or that the systems you have enabled are all locked out or that the systems you have enabled and unlocked don't have any channel groups enabled and unlocked or that the enabled/unlocked channel groups don't have any unlocked channels.

i.e. You don't have anything enabled to scan ("Nothing to Scan").

If a channel group is locked you, you must navigate through the menu to unlock it.

If a channel group's Quick Key (GQK) is disabled, you can enable it by pressing FUNC + # (#=the GQK for the channel group) while scanning that system. But, if it says "Nothing to Scan" you'll need to FUNC+Scroll to the system then press the GQK while FUNC is still active.

It depends on whether you want to enable/disable any/all of the sites
individually. You might want to program your 'local' site on a different
SQK, for example.

I see that the reviewers have not used any software yet. The big difference I see is the programming time between the 396 and the 396xt. The xt is ALOT faster.
The time it takes to transfer a file that takes 50% of the memory on the 396t is about an 1 hour and 5 minutes. That same file sent to the 396xt takes 3 to 4 minutes. Now thats fast. That is using the Freescan software. We will see what Butel has when it comes out.

An hour!!!
I've used freescan, bctool, proscan and butel and I have my scanner about
90% full (396t) and it's never taken longer than 15 minutes to load the
scanner, some software is faster than others, and to read the scanner
takes less than 5 minutes and closer to 3.

Mine has Hold flashing in the upper left when it scans. Is this the normal scan mode or do I need to turn it off someway ?

That means you have system hold activated and the scanner is only scanning the 1 system (regardless of the SQK or lockout status of other systems). Toggle this off for normal scanning by doing another long press of the HOLD button.

Not directly. There are significant differences in the data structure/feature set.

However, I believe some of the PC applications will let you read from one, then write to the other (but in doing so you might miss taking advantage of many of the new features).

No, the T and XT will not "Clone" directly. Nor will the 996 T or XT. You can use FreeSCAN to backup, modify, and upload to the XT.

I talked to Gommert at the Dayton Hamvention. He is working on the new Butel product as we speak. I am beta testing version "0.86 build 1" as I write.

It will be just a good, or better, as Butel's prior products when the full version is released.

How many Trunk sytems do you have in your 396?

When I load the Mass State Police, it takes forever. And add all of the State of Connecticut, it takes even longer. The xt does the same file in about 2-3 minutes.

I have done this on several computers and different operating systems and the result is the same. As for reading, the 396 does fine-2 minutes max. The xt, is maybe about 30 seconds.

An hour!!!
I've used freescan, bctool, proscan and butel and I have my scanner about
90% full (396t) and it's never taken longer than 15 minutes to load the
scanner, some software is faster than others, and to read the scanner
takes less than 5 minutes and closer to 3.

----- Original Message -----

Subject:Re: [BCD396XT] A more in depth review at scannermaster.

I see that the reviewers have not used any software yet. The big
difference I see is
the programming time between the 396 and the 396xt. The xt is ALOT faster.
The time it takes to transfer a file that takes 50% of the memory on the
396t is
about an 1 hour and 5 minutes. That same file sent to the 396xt takes 3 to 4
minutes. Now thats fast.
That is using the Freescan software. We will see what Butel has when it
comes out.

>
> I just bought a BCD396XT and will have it shortly. There seem to be MANY approaches to programming it. It seems that I can possibly download a file using freescan from radioreference.com if I pay for a preferred membership. It seems that maybe I can enter my latitude and longitude somehow to get local frequencies. And I'm sure that I can enter the frequencies manually. I'd prefer a download and live near the Worcester, MA area. Although I'm a newbie on scanning I have a programming background and am willing to tackle this comprehensively. I hope I posted this in the right place, if not I'm sure I'll find out fast.
>

I just got my XT and am (for the first time) using Freescan to program the radio. I live in a smallish metro area (portland, or) and thought about the paid subscription to radioreference that would allow me to download systems directly to the scanner. I opted not to do this. For one this you can easily copy and paste using Freescan's EZ Grab feature to "grab" all the talk groups, freqs, etc, Freescan is a great program and with your background you would have 0 probs.

Program it as Motorola Type II. Since it has analog TGs, it cannot be a P25 system.

Hi,
I'll bet I know exactly what you're programming! St. Louis City, right? They're so messed up it's unreal. Joe is correct, of course, Motorola Type II. The new City system is a single control channel P25, but there are a couple of things going on down there. They're simulcasting and also the bandwidth is such that if you're more than a mile or so outside city limits you aren't going to pickup a lot - even if you have a good external antenna up on your roof at home.
But City appears to still be going back and forth between the old and new systems fairly often. It seems as though they don't have all the problems straightened out on the new one yet. I could be wrong but as of a week or two ago, I know I heard them on both the old and new systems. (What a mess!!)

P-25 modulation aka ASTRO is not the same as a P-25 9600 baud system. The scanner if set to all modulation will decode both analog and digital.

Actually, ASTRO is Motorola's term for 'digital' and does not
necessarily mean P25. Only ASTRO 25 is P25. There are many other ASTRO
modes that no scanner can decode.

1808. Serial to USB Adapter?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-30 14:05:55 UTC
From: dan_sekerak
Topic: 1808 Message: 1808

I would like to use Freescan and connect my 396xt to my PC that unfortunately does not contain a serial port. I realize I could purchase the USB cable for this scanner from Uniden but was wondering if anyone here has purchased an adapter to convert serial to USB that can attach to the supplied PC interface cable. If so where did you get it and can you please send me the links. Thanks!

Dan

Dan, any serial to USB adapter should work provided the drivers are up to date.
Try newegg.com or Radioshack. Uniden selles a direct serial to USB cable called the USB-1 and is supported by Uniden if you have any problems getting it to work.

This has a lot to do with how loud the inside of your car is. I have an older, noisier vehicle (the scanner is probably worth more than the vehicle!). The XT is just BARELY loud enough. If the AC is on MAX, or the broadcast radio "AM/FM" is on at much above a whisper, I cannot hear the XT. An external powered speaker would not be a bad investment in such cases. In my newer van, it's not as bad, but I still have to be careful not to play the broadcast radio too loud or I could miss something . . .

I got the software and cable for $5 + $3 shipping.
Came from China so it took about 10 days.
Works perfect.

Hello to everybody!

I've just joined yesterday, and it nice to see all the helpfull advise being posted, I'll be purchasing a new scanner in the next few days, my choice is the Uniden BCD396XT, but I'm now second gessing myself with the GRE PSR-500 as well as the PRO 106, any suggestions on which is better, I currently own a Uniden 895XLT, I enjoy listening to the law enforcement in my area, I'm in the Mississauga Ontario area, I'm interested in the O.P.P Provincial Police, as well as our local Peel Regional Police, Halton regional police and the Metro Toronto Police, I believe they all use different systems and the OPP is on a digital system. Any suggestion would be greatly appreciated, thanks in advance for any help/suggestions.

I know , some people says is loud in car(just car etc) but it is same loud like?.....
BC120xlt? or any scanner? becouse some people have DIFFERENT opinion.In home in car if is some noises is it clear ,loud easy to read or very poor?
Just like 400mW(400mWaudio output is very well for me) is it true for 396XT or like AOR 8200(is poor audio in my opinion) If the audio outpu from internal speaker like BC120xlt will be ok is it?

1815. Trouble with Colorado 700Mhz P25 Site

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-30 18:19:35 UTC
From: Chris
Topic: 1815 Message: 1815

I am having issues with the Adams County, Colorado Simulcast 700Mhz site. (775.5312)cc. It appears I have everything programmed in OK but the audio cuts out real bad and is almost non existent. Another thing that it does is that it will stop on the trunk groups with no audio. If audio does come out its only 1-2 words of the transmission. It's frustrating to see it stop on many groups with no audio. Does anyone have any ideas? I have tried programming just the CC as well as all of the frequencies.

I have a GRE PSR 400 and the 396XT so I can only do a general comparison. I love the 396XT and use it for regular monitoring of all systems in my area (South East Fla) and the 400 for my hometown freqencies. When I got the 396XT a couple of weeks ago it took me a while to understand the DMA programming, but once I understood the programming I used Radio Reference along with Freescan and downloaded all my county trunked system frequencies and a neighboring county's trunked frequencies (Almost all stuff is trunked down here), The Digital decode works great as in the neighboring county. The neighboring county has almost all Police and fire in digital though there is analog for the sheriff's office and dispatch channels. The 396XT also gets less interference from my Computer, The GRE continually hangs on 866.5125 when I boot my PC and the 396XT just scans away.

From my experience with Uniden vs GRE/Radio Shack I would definitely get a Uniden,

The only thing I can think of is that you have Priority Scan enabled. Try disabling priority scan and see if the same thing occurs.

1820. Re: [BCD396XT] Bying a new scanner

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-05-30 21:06:09 UTC
From: J. Newell
Topic: 1813 Message: 1820

I have been running a BCD396XT next to a PSR-600 since the day the XTs first started shipping. I live in the metro Boston area. Honestly, I think it's a toss-up. The Uniden is smaller than the PSR-500. Memory structure and how you turn on and off scans is different. The Uniden is probably a little more intuitive (to the extent that any of these can be intuitive) for most people. You can get similar results with the GRE, but you have to do it a little differently. One thing - Paul Optiz's support of the Uniden (he is the product manager) is truly outstanding. Toss a coin? Buy whichever you can get a better deal on? I really don't think you can make an error either way.

From: Clark Rennie
Topic: 1813 Message: 1822

I have or had both a BCD396XT and a PSR -500. Sold the PSR-500. I believe the Uniden method of DMA memory is much more versatile. Each and every system is available to use and be active at any time. The GRE memory uses Virtual folders with only 20 or 21 scan lists per folder. Only one Virtual folder can be active at one time. Thus, if a scan list in one folder and a scan list in another folder need to be monitored simultaneously (as scenarios change) , it can't be done. But the Uniden will allow all systems to be activated or deactivated as needed.

Subject: [BCD396XT] Serial to USB Adapter?

I would like to use Freescan and connect my 396xt to my PC that unfortunately does not contain a serial port. I realize I could purchase the USB cable for this scanner from Uniden but was wondering if anyone here has purchased an adapter to convert serial to USB that can attach to the supplied PC interface cable. If so where did you get it and can you please send me the links. Thanks!

Hi again

Just wanted to thank all of you for your much appreciated info/recommendations on which scanner to purchase, it really helps convince me of my original choice.
If anyone ever requires any info from my area here in the GTA in Ontario, please don't hesitate to ask and I'll do my best to get the info.

Regards
Russ

Subject: Re: [BCD396XT] Bying a new scanner

I have been running a BCD396XT next to a PSR-600 since the day the XTs first started shipping. I live in the metro Boston area. Honestly, I think it's a toss-up. The Uniden is smaller than the PSR-500. Memory structure and how you turn on and off scans is different. The Uniden is probably a little more intuitive (to the extent that any of these can be intuitive) for most people. You can get similar results with the GRE, but you have to do it a little differently. One thing - Paul Optiz's support of the Uniden (he is the product manager) is truly outstanding. Toss a coin? Buy whichever you can get a better deal on? I really don't think you can make an error either way.

Subject: [BCD396XT] Bying a new scanner

Hello to everybody!

I've just joined yesterday, and it nice to see all the helpfull advise being posted, I'll be purchasing a new scanner in the next few days, my choice is the Uniden BCD396XT, but I'm now second gessing myself with the GRE PSR-500 as well as the PRO 106, any suggestions on which is better, I currently own a Uniden 895XLT, I enjoy listening to the law enforcement in my area, I'm in the Mississauga Ontario area, I'm interested in the O.P.P Provincial Police, as well as our local Peel Regional Police, Halton regional police and the Metro Toronto Police, I believe they all use different systems and the OPP is on a digital system. Any suggestion would be greatly appreciated, thanks in advance for any help/suggestions.

Wrong, Shelly! The correct answer is St. Charles city. According to RR everything is analog except for the PD channels. I programmed the system with the control channels listed but the control channel(s) was wrong. I ended up entering all five frequencies for the system and I finally got it to work. Not a strong signal either. There is a posting for an extra channel with a FCC application but I am not really sure if it needs to be there.

If you are familiar with St. Louis (which I think you are, hint) the St. Louis system is actually better than what I expected. They are simulcasting on only two analog TG's and the signal I am getting in my home is FAR better than the old analog system. But I still need it if I want to monitor EMS.

FYI, today at the intersection of Clarkson and Manchester Rd's I picked up the city P25 TRS with the stock antenna, inside my vehicle. Loud and clear.

If you want to e-mail me direct so we don't bother too many folks here you can.

Happy listening.

jeff

Hi,
I'll bet I know exactly what you're programming! St. Louis City, right? They're so messed up it's unreal. Joe is correct, of course, Motorola Type II. The new City system is a single control channel P25, but there are a couple of things going on down there. They're simulcasting and also the bandwidth is such that if you're more than a mile or so outside city limits you aren't going to pickup a lot - even if you have a good external antenna up on your roof at home.
But City appears to still be going back and forth between the old and new systems fairly often. It seems as though they don't have all the problems straightened out on the new one yet. I could be wrong but as of a week or two ago, I know I heard them on both the old and new systems. (What a mess!!)

After some confusion with control channels for the system I was programming, I got it corrected and it decodes both digital and analog.

Thanks.

Actually, ASTRO is Motorola's term for 'digital' and does not
necessarily mean P25. Only ASTRO 25 is P25. There are many other ASTRO
modes that no scanner can decode.

Many other? Vselp is the only other one I can think of. 1 or 2 left I believe.

What I was trying to simplify is the P-25 thing for some of the newer listeners who think that because a system uses Astro modulation it is a P-25 system. There is always the people who say Astro modulation is encryption. It is not.

How far away are you from any transmitter site. If you are in a fringe area the scanner tends to stop on a TG nut not have any audio?output. Don't know why, it just does. The first thing I would do is make sure you are getting the best signal possible.

I am having issues with the Adams County, Colorado Simulcast 700Mhz site. (775.5312)cc. It appears I have everything programmed in OK but the audio cuts out real bad and is almost non existent. Another thing that it does is that it will stop on the trunk groups with no audio. If audio does come out its only 1-2 words of the transmission. It's frustrating to see it stop on many groups with no audio. Does anyone have any ideas? I have tried programming just the CC as well as all of the frequencies.

They should be fine. They will last a bit longer than the ones that came with the scanner and will also take a bit longer to recharge because of their higher capacity.

14-16 hours. Depends on the capacity of the battery and if it was completely discharged or not. Obviously shorter charge times if not fully discharged. I'm very pleased with the batteries that came with the BC396xt. I've also used higher capacity batteries. No complaints. When I switched from my BC246 to the BCD396T I wasn't happy. 3 batteries and they didn't last as long as I would like. So I started using 2700mah. With the BCD396xt I use 2800mah and they hardly ever run out.

Thanks, I was wanting to go back and pick up those. Another question

I was planning on buying a charging system for the new batteries as well, I think energizer has one fairly cheap. could I put my uniden batteries on that same energizer charger? would be nice just to keep a set on the charger and swap them out when needed.

Speaking of an external charger...is there any device out there that can check, or test load, AA batteries? I have a bunch of batteries that I have charged but some only last a very short time. I would like to purchace a load tester (if that's what it is called) so I can throw away (or recycle) the old batteries and not be dissapointed when my camera or scanner poops out after 30 mins.

thanks

Subject: Re: [BCD396XT] Rechargeable Batteries

You can put any type in your scanner, but I would recommend charging
them externally for a proper charge. I would also recommend sticking
with name brand cells.

Make sure you stick to NiMH batteries and a charger specifically made to charge them. NiMH batteries deliver a longer power supply and don't have any residual memory however, they require a hiigher charge current which most chargers can't handle.

In my photo business I use only Maha batteries and their charger, not cheap but good. You might want to take a look at the here:
http://thomasdistributing.com/shop/advanced_search_result.php?keywords=maha&x=0&y=0
Just my 2 cents worth.

Yes, there are. In fact, one of the better cell chargers is the MAHA
MH-C9000 which has many test modes built in. It can also recondition
your cells and show the resulting capacity.

LOL Jeff - you got me! I'm picking up St. Charles City pretty well, especially mobile. I'll check to see if I have the extra frequency entered or not and let you know via email. We can also compare notes in email about St. Louis City. I'd like to know if you're receiving all the districts - that's what has been problematic outside city limits. A couple of the TGs have been loud and clear though. Anyway, we can discuss in email!

I TOTALLY agree Derek! Assaf has written a really good piece of software for our BCD396XTs and continues to update it frequently! It may be free but that shouldn't stop those of us who use it from making a donation for all his hard work. I also did after the first time I used it. I was very impressed with the program and thought it only fair to pay him for it.

1846. Control Channel Output for Trunk 88/Pro96Com

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-06-01 12:54:00 UTC
From: dmccorm@charter.net
Topic: 1833 Message: 1846

I had some success this weekend using the Uniden BC346XT and BCD396XT with Trunk 88 and Pro96Com (396XT only for Pro96Com becuase of the P25 decode).

What I didn't realize was that you have to program the trunked control channel in a System before it will work. If you just try to use a custom search limit (with, or without CC-Only) it will not work. If you just put the control channel frequency in the Hold mode it will not work either. Keep in mind that the BC346XT will not work for P25 because it needs the control channel in a valid system before it works.

Just for giggles I tried UniTrunker 1.0.0.5 Alpha again with no luck, but others should try to see if it will work. I have yet to try UniTrunker-Retro to see if it will work.

Also, I have yet to see if the "extended" data has a purpose for the current decoders.

Can anyone else shead some light on the extended output?

By the way you can verify if the output is working by using a terminal program such as the Windows Hyperterm.

1847. Re: [BCD396XT] Re: Dual Mode ? Trunked System

From: SRehm24416@aol.com
Topic: 1803 Message: 1847

I am in the city and I am picking up all the districts. There is no deviation in signal like with the analog system. I still think there was/is an antenna issue with some transmissions. I can get a very strong signal on a TG then if it switches repeaters the next signal may or may not be strong. Very odd and I am sure I am the only one that notices it.

The new system is still using the tower downtown next to the comm center. So I have been told by a city dispatcher. They still have the back up on Sublette and they just built a new tower on Union at the area lll station. Don't know what they are going to use that for yet.

The city has also scaled back or eliminated special groups like the SCAT, and others. So there is minimal "extra" traffic and not as many TG's as there used to be.

I was shocked to hear the city out on Manchester but when you look closely it is very high and you can see pretty far. The old (still there I think) SBC/AT&T building up by Metro West house 1 used to have a huge SW antenna on the roof. Boy what a distance that could cover. I think I may have even heard them using it for a test many years ago talking all over the country with other stations. That is when I had the time to actually listen to my SW radio. Ha.

Anyway, what kind of questions do you have, or comments etc. Don't know if I can answer any of them but maybe we can learn something.

jeff

And the answer is....no, you can not password protect the scanner.

Hello -

Where did you locate a remote head for the 396XT?

Thanks,
Dan

The password feature is something found on the GRE PSR500/RadioShack PRO-106.

With the FreeSCAN program (version .9+) you can "protect" systems from modification and also use the KeySafe feature on the radio to keep others from modifying them or messing them up yourself.

Hi Dan,

I've had my remote head since it was released - at least a year or two ago. Got it for my 396T and then did the firmware update to make it compatible with the 396XT. I find it invaluable in the car because I don't have to take my eyes off the road to see what agency is dispatching, etc. A quick glance at the remote head, which is mounted on the dash, just to the right of where I'm looking out. I can glance over and see the display without ever looking away from the road ahead of me. It works really well!

As someone else mentioned, you can find pretty good buys for them on eBay. I would advise you to make sure they also have all the wiring with it if you bid on one. It's just easier - rather than having to order replacements from Uniden or somewhere else.

Shelley

Hi all!

I have programmed Quick Key 0 for Close Call. Programming done via ProScan 2.1.0. But this Quick Key does NOT work. When I in Scan mode, pressing "0" key does not turn On or Off Custom Search. Last symbol cnages from * to "0" and back, but Custom Search not turns of in any case. All other Quick Keys works fine.

Any ideas?

The Close Call function cannot be assigned to a Quick Key.
The System Quick Keys can only be assigned to Systems.

I found a problem.

I must have at least one frequency in temporary system 'Close Call Hits'. If I have nothing here, this system not in scan list and '0' Quick Key have no any effect.

That's normal. When you enable an 'empty' System, it will not be scanned
since there is nothing to scan in it.

Again, you're *not* enabling the Close Call feature - you're enabling
the Close Call *System* that is empty until you get a Close Call hit.

I know that empty system can't be scanned!

But I've hoped that I can assign Quick Key for Close Call mode, not to 'Close Call Hits' system.

I have mistaken because isn't clear what this setting do when you use ProScan. It located in simple of features on 'Close Call Setting' tab and noting indicates that it for 'Hits with Scan' only.

P.S.
Thank for all! Issue closed. But I will be glad to see Quick Key feature for Close Call mode per se.

I'm afraid that I don't understand how something other than a mag
mount would ruin the tint, but nonetheless, you could get something
like the MFJ mag mount shown at the following URL

http://www.universal-radio.com/catalog/hamantht/4443.html

and just connect a bnc rubber duck to it if you really need low
profile. If you want more antenna performance, you might want to
look at the Larsen NMO150/450/800 which is also available in a mag
mount but is going to be somewhat taller and less flexible.

1871. Updated StarCom21 Programming Files

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-06-05 01:13:59 UTC
From: n9jig
Topic: 1871 Message: 1871

I have posted the new updates to the Illinois StarCom21 Programming Files for the Uniden BC996T scanner to the CARMA Profiles Page at www.carmachicago.com/profiles.

These files are in ARC996 and UASD996 formats, and can also be imported by FreeScan and other applications. For those users of the new Uniden BCD396XT you can also import these files with ARC-XT or FreeScan.

These files have the latest frequency channels, updated GPS locations and up-to-date talkgroup lists. Due to the 996's 250 TG limit, I restricted the talkgroup lists somewhat, only including ISP, ITTF, and the McHenry, Champaign, McLean, Madison and St. Clair County lists.

Feel free to alter these files as you see fit, the Master Talkgroup list from the CARMA StarCom21 Profile is set up to be cut and pasted directly into ARC996 and other applications.

Close Call Mode is activated/desctivated via FUNC-HOLD. Not a one-key solution like SQK 0, but fewer keys than SQKs 10-99... :-)

Currently you have two choices: FreeScan and ProScan.

FreeScan is free. ProScan is not.

Both have demos you can try, I think.

I know. But to do that, I must remove scanner from D clip on belt and have both hand free.

But when I drive on car, I must left wheel for a 3..5 seconds :)

Is NOT convenient/is NOT safe.

QKey will be better, because work in one touch.

> I know. But to do that, I must remove scanner from D clip on belt and have both hand free.

Naaaa... hitting the FUNC key is easy (much easier than any front key)
and the HOLD key is easier to find than any number key since it's in the
top left corner - practically right next to the FUNC key.

As for both hands, nope. The FUNC key is sticky - you can hit it then
hit the HOLD key with one finger easily let alone two hands.

> But when I drive on car, I must left wheel for a 3..5 seconds :)

With very little practice, you can shave that down to less than one second.

> Is NOT convenient/is NOT safe.

Technically true, but just as true for a SQK - especially a two-digit one.

> QKey will be better, because work in one touch.

That's the one point I'll agree with you on, but again the FUNC key is
trivial to hit first, and finding the HOLD key is easier. In fact, both
can be done without looking at the keypad - something not true for SQKs.

Topic: 1869 Message: 1885

Because I primarily monitor 800-Mhz systems, I've had some success and been very pleased with the looks of the Antenex Phantom Elite Low Profile Dual-Band 806-866Mhz antennas (google for ETRAB8063) and the TrunkMount NMO mount (google for 901101). Nobody ever notices this antenna any more - I'm not advertising that radios are in the car. Of course, being a trunk lip mount means I get some directional issues - but I'll live with it rather than have a moving porcupine. J

YMMV .

I'm afraid that I don't understand how something other than a mag mount would ruin the tint, but nonetheless, you could get something like the MFJ mag mount shown at the following URL

http://www.universal-radio.com/catalog/hamantht/4443.html

and just connect a bnc rubber duck to it if you really need low profile. If you want more antenna performance, you might want to look at the Larsen NMO150/450/800 which is also available in a mag mount but is going to be somewhat taller and less flexible.

Hi Dan,

I have used the following for both the 396X and 396XT. It has been a great antenna for my car and I HIGHLY recommend it! I bought it from HRO and they got it to me quickly and safely. It includes the coax on the mount (I use the lip mount, not the mag, although I included the mag mount info below). It's a short antenna, yet has great gain. I live in St. Louis County (MO) and have little problem hearing everything I have programmed into my scanner, which is virtually most of City and County. Here's the info:

Larsen Tri-Band Antenna
NMO150 / 450 / 800
Frequency:
150-165 / 450-470 / 806-940 MHz
Gain: ....2.14 dBi ± 1dB
Mount:.........................NMO
Height: .... 16.5"
This is a great anenna for scanner
operation. It is NOT tunable for amateur
operation.

Mag mount
NMO MMR

Again, I've used this antenna for at least 4-5 years (have had two of them) and highly recommend it.

Shelley

I route the audio from my scanner through the computer all the time
both to facilitate recording and to listen through the computer
speakers. You should, however, take a look at the following post in
which I explain how I got rid of the popping noise that resulted from doing so.

http://www.radioreference.com/forums/uniden-scanners/141725-bcd396xt-audio-popping-solved.

1895. Happy with Scanners Unlimited

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-06-06 19:34:51 UTC
From: n1chu
Topic: 1895 Message: 1895

Just got my BCD396XT yesterday from Scanners Unlimited. I paid the $495 plus about $10 in UPS shipping. But I live in Ct. - just one state away. I paid $504 and change bottom line. The software was additional. They gave it to UPS and the next day I recieved it. I had a copy of the Butel ARC XT PRO beta a full day before the radio arrived so I had a chance to become familure with it and had some stuff programmed and ready to load. I haven't tried it with Free scan as yet but Free Scan looks like a lot of power for the price! (I have been collecting Butel software for years now so it was almost traditional that I buy the Pro version and pay the $#70. I rationalized it by saying to myself "If I'm gonna spend %500 for a radio, what's another $70?" for something that's promised to work!)

The radio plays fine-just need some time to proof out my attempts to get the tone alerts working and the bandscan. I'm gonna print out the manual, shrinking it down a bit in size, double side the thing and save some paper. I wish the people who put out the "Nifty" manuals would include Uniden radios but to date they don't. However, they do have some accesories worth looking at. (http://www.niftyaccessories.com). These manuals or guides are a neat comprehensive, condensed, laminated product that will fit in a shirt pocket, about a cigarette pack size wide and twice as high. Maybe if enough of us ask for Uniden versions, they might see a market.

Someone said the backlight colors were lacking somewhat. I find the blue is useless but the green or white is much better than the old 396T models blue. I can actually see the display. My eyes aint as good as they used to be.

So far, a pleasent experience. Hope all have the same luck as I.

Bill

1896. ARC XT PRO software

Yahoo group: BCD396XT (2008 — 2010)

Scanners Unlimited sent me a URL link to their store which allowed me to download the beta version of Butel's latest software. It says it is good for 30 days for evaluation purposes before it must self destruct or something. I don't know because I paid up front and got the address in an email. Since I already had my registration numbers to plug in when I downloaded the software, I didn't wait to see what would happen if I ran it for 30 days. Of course, like I said, I purchased my copy up front. It may be that the download capabilities from Scanners Unlimited are guarded due to what may be percieved as loosing business. But on the flip side of that coin, If it were me, I'd be giving out that download to as many people as possible, given the compitition, Free Scan, (to name the cheapest one), is so powerfull and costs nothing. Let people try the $70 pro version or the cheaper one in the hopes they get hooked it.

You will notice I did not list the download page from Scanners Unlimited. And for all I know it may be available without calling them an asking for it. But If it is, I will let Scanners Unlimited say it. Afterall, it's their commercial website representing their business which helps keep people employed. In this economy I don't want to be the one to contribute to the loss of a livelyhood. things are tough enough out there for a lot of us. Just look at Scanner Master. I understand the owner retired? If it was a going conern, someone would have seen a chance to make a buck and buy out the business.

Hey, maybe the software has been accessable all along, or if not, what I wrote up top might convince them it should be...

So Rich Barnett retired? I know that scanners unlimited are all done closed up and that glen Cohen did retire a year ago or so.

Subject: [BCD396XT] ARC XT PRO software

Scanners Unlimited sent me a URL link to their store which allowed me to download the beta version of Butel's latest software. It says it is good for 30 days for evaluation purposes before it must self destruct or something. I don't know because I paid up front and got the address in an email. Since I already had my registration numbers to plug in when I downloaded the software, I didn't wait to see what would happen if I ran it for 30 days. Of course, like I said, I purchased my copy up front. It may be that the download capabilities from Scanners Unlimited are guarded due to what may be percieved as loosing business. But on the flip side of that coin, If it were me, I'd be giving out that download to as many people as possible, given the compitition, Free Scan, (to name the cheapest one), is so powerfull and costs nothing. Let people try the $70 pro version or the cheaper one in the hopes they get hooked it.

You will notice I did not list the download page from Scanners Unlimited. And for all I know it may be available without calling them an asking for it. But If it is, I will let Scanners Unlimited say it. Afterall, it's their commercial website representing their business which helps keep people employed. In this economy I don't want to be the one to contribute to the loss of a livelyhood. things are tough enough out there for a lot of us. Just look at Scanner Master. I understand the owner retired? If it was a going conern, someone would have seen a chance to make a buck and buy out the business.

Hey, maybe the software has been accessable all along, or if not, what I wrote up top might convince them it should be...

Bill

Topic: 1896 Message: 1902

I tried the version from the link at Scanner Master. This version does not work, goes into a loop when trying to read from the scanner.

This version said there was an update available from BuTel. I checked that but it also does not work. I had to kill it with Task Manager. According to the website, this is not a demo version, and requires registration. That may be why it did not work.

Hopefully Gommert will release a working version soon as I've now started the 30 day clock and I will not buy it without trying it first.

So my recommendation is to not download ARC XT until BuTel releases a demo version that works. Otherwise you may miss out on the free evaluation period.

I just Downloaded ARC XT Basic ver: 0.87 BETA 003 for testing. It is better and quicker than earlier ARC model programs have been. I would suspect that no downloads available at this moment are working programs as Gommert's beta site is protected.

My $0.000002 cents worth.

Be safe, y'all.

The ARC XT Pro software doesn't seem to be available for download, even at
Scanner Master or Butel.
Where did you obtain the registered version ?

All Butel progs 'buggy' and crashes (when used continuously for the few days for recording & etc.).

This is 'feature' of Butel products.

Go to Scanner Master and Soft Ware under search top left type in ARCXT Pro, that should take you to the download or CD it is a beta it you buy it they send the key the up dates are free.

Duane
W6DDR

PS good luck
The only way to find it is use the search box.

It's available at a significant preorder discount at butel.nl. When
I purchased the preorder, I received a link to the beta and registration codes.

While there are the kind of issues that one would expect with a beta,
the major features run as they should under Vista Ultimate 32 bit.

Where are you guys seeing software for the 396XT? I see no mention of the XT anywhere on the Butel website.

The "out of stock" surprised me too. Do what I did and click on the Add to cart.

That remains to be seen until the software is released, but if all
you want to do is program the scanner, FreeScan will do the job.

At present it appears that audio recording may be one major additional feature.

Since it appears that there are trial versions of all of the other
Butel software, I would think it likely that there would be, but I,
of course, don't know for sure.

Scanner Masters and then do a search for ARCXT Pro. that is the only way you can find it. It is a Beta and you can use it for a little while with out all the bells and whistles be for you have to buy it, I got the Pro. down loaded on line works great.

Go to Scannermaster.com In the upper left search box, type ARCXT. Click on ARCXT Basic Software Download - Beta or ARCXT Pro Software Download - Beta. Click on the word "DEMO" in Download the DEMO." The XT software is listed at the bottom of the list. You have a choice of the Basic or Pro versions.

Hi Alan,

I use the Butel software for several of my radios and love it. Am currently struggling learning the 396XT. I also have a 396T and like the newer one even more. Great!

I just got back from the week on the Outer Banks. I did run the Coast Guard VHF freqs as you had suggested and I didn't hear a peep on any of them. But I also didn't hear anything on the "usual" USCG air freqs even tho there was a S&R op right in front of our house. Heard lots of USCG traffic on the usual marine freqs. Even tho Radio Reference didn't have much there were a couple of accurate lists I found around the web. If you'd like the info, would be glad to pass it on. Gotta admit with the local PD and Sheriff I didn't really bother to do any detail note keeping, just plugged them in and played.

Before the trip I bought a Ramsey Passive Air Band Monitor. Interesting. It worked well on all the flights. Since the crew almost always reads back the instructions from ARTCC, easy to follow the flights progress and build a frequency list.

I'm off to Dallax, TX, Wednesday morning for a week.

Sorry I couldn't help verify any of those USCG VHF land mobile freqs.

Denny

1930. Help with comm test

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-06-08 17:45:00 UTC
From: wb6qmp
Topic: 1930 Message: 1930

Anyone in the Whittier/North Orange county, Calif. area with a working USB comm link can help me test my USB cable and scanner?

I can't make mine work, think its a PC problem. It reads but won't write to the scanner.

TK

1931. Re: [BCD396XT] Re: ARC XT PRO software

Yahoo group: BCD396XT (2008 — 2010)

From: kenstark@bellsouth.net
Topic: 1896 Message: 1931

If you are a registered owner of other Butel ARC Scanner software and provide them with the needed proof. You will get an additional discount as I did, and pay a reasonable $34.95 for ARC XT PRO. Also be advised to check through ARC XT PRO for new updates to the software as it seems that Butel is actively updating the beta software at least once a day.

I know that FreeScan and ProScan are free, but I am having difficulty with those products. When I add them to my environment of running 7 Uniden Scanners concurrently attached to my computer, my computer becomes slow and somewhat unstable. Adding ARC XT PRO to the same environment I am not having these problems
at this time. That in itself makes the cost I payed above well worth the money.

Thanks.......and Keep Safe!

I have now gone directly to Butel and paid for the pre-release (and

downloaded) of XT PRO at the discount price of

$49.95. All is now resolved.

I am using the XT Pro Demo version .085 - Beta 001.
I sucked in my data from my 396XT and on the surface it looks clean, however I cannot find where the GPS coordinates are.
At the price he is asking, I am sticking to FreeSCAN until I have evidence the live version will include this and other features that justify the $$$.

Does anyone know where (in FreeSCAN .9B) to maintain POI's?
I manually entered a couple into my BCD396XT, however when I load my data from the scanner to FreeSCAN I can't find them. When I make all my other adjustments, then send back to the scanner (Erasing all systems and settings) I lose the POI data.
I can keep it only IF I "Replace any existing system by the same name, add remaining". However, this doesn't remove the systems I am through with.
Since I travel a lot, I routinely delete several systems when I get home. Up until now, my procedure was to do it in FreeSCAN, then re-send to my scanner erasing everything before sending out the changes. This works great, however the POI's get lost in the process. Otherwise I am a happy camper.
I am sure as I learn more about this, I will eventually come up with work arounds, but if anyone has input, I thank you ahead of time for your replies.

Likely not. That may be why the current beta is so hard to get - they
don't want people evaluating the version that is not finished/ready.

If the trial was reset with each new release, you could get nearly
unlimited life out of it while bugs are fixed and features are added.

You're a number of versions behind. The software is now at 0.87 Beta 004. I don't know when it was added, but this version has the places for the GPS data.

These versions have been changing fairly quickly as one might expect from a beta, so it's a good idea to keep up to date.

I would think that the trials would be reset only until the first
regular release at which point you could still have 30 days without
the possibility of using it forever without paying.

Have you notified the author on his forum so that he can respond
and/or fix whatever needs to be fixed? He's been extremely
accommodating to bug reports and feature requests, but I don't
imagine that he can monitor all the possible elists and forums.

The first link on the page is the entire site.

Since most pages cover all 4 models (BCD996XT, BCT15X, BC346XT, and BCD396XT), there isn't an export for just one model.

If my math is correct you got a 30% discount. There is now a 15% discount for those that have purchased 2 other Butel programs and a 20% discount for those that purchased 3+ programs.

"Multi software purchase discount / Returning customer discount :

2 packages: 15%

3+ packages: 20%"

When I asked for the 15% returning customer discount, I was told that the preorder was already discounted 25%.

Not directly, but you can import a file from one radio into the other via some of the software packages. ARC products for example allow you to import files from other applications, and FreeScan will also.

Since the XT and 996 both support GPS you should be able to do this. I used FreeScan to import the CARMA 996 StarCom21 file into my 396XT.

well thank you ,,

im a LONG time uniden customer one of my first was a 4 ch crystal unit in the late 70s
then the BC200xlt
then the bc 235
  then the bc245
 then the bcd396t

and now the bc 396xt
i live in kansas city mo, theres tons of digital here to listen to , i like the fact it can here a 700mhz digital trunke sys like independence missouri and the fact that software upgrads always seemed to keep my 396t up to date , i had it from 2005 when it first came out

and from learning the bank channel changeover to dynamic memmory once i squared that , it was pretty decent then

so what are the differences between the xt and the 396t? if you know

have a good one folks

There are quite several enhancements the xt has over the t. You should check the wiki for the radio online. You might want to get a case for the radio as well to protect it when you are on the go. I would suggest the leather case from scannemaster. Its a nice hard leather rugged case that will keep your radio investment well cared for and it looks good too. I got one myself. You might also want to get a software to program the radio. I have programed all my radios manually including the xt but I enjoy it that way. I live in Boston and its good and fun scanning here. I had the t myself and I sold it on eBay as well to get the xt. Well this is a great group and if you have any questions we are all here to help each other out including upman himself. Happy scanning! :)

On the scaner case,,, I kept the one from the 396t that i sold, as it wasnt included in the auc description so i plan to use that

I had one other enhancement , I used Plastic display anti scratch covers i bought at best buy they are little clear, plastic covers that stick over displays to keep them from getting scratched the T that i had had , 0 (ZERO) scuffs on the display from using this stuff i plan on using it on the xt as well

1957. Newbie BCD396XT Scanning Question

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-06-09 16:34:30 UTC
From: Roger Davis
Topic: 1957 Message: 1957

I bought the scanner and it looks like I figured out how to download frequencies into it using Freescan. Now when I turn it on I think it's scanning but I hear nothing. I live in a podunk area, maybe nothing's going on, but maybe it's either not really scanning or I can't get the squelch right. I can't figure out how to drop the squelch (like the way I used to on "older" scanners". Any ideas? Is there anyone out there or any place out there that might render me some assistence on this scanner? I live in the Sturbridge, MA area. Thanks, Roger

None has been announced. If I remember correctly, there is a
firmware upgrade for the one that's been discontinued so that it will
work with the XT.

BTW, where did you find the remote head in stock?

Set the squelch to 2. Make sure you set frequencies to analog or digital. Try conventional channels first and then trunking channels. Also check the 396xt wiki manual here in the group to make sure you have all the correct settings.

You can adjust the squelch much the same as in the past provided that you're scanning a conventional system. You can't do it on a trunked system. Press Hold on a conventional system. Then press the function button and press down on the rotary knob. The squelch display should appear. When you've got it adjusted, just press down on the rotary know again.

For the squelch, hit the FUNC button then tap the SCROLL KNOB. Turn the scroll knob to adjust it after you've done this, then it will time-out when you're done.

For the scanning, are the Systems locked-out? If you assigned a SQK, is it enabled? Same question for any GQKs, and any Groups or Channels unlocked.

Download and upload (and then enable scanning of) the MSP freqs and TGIDs. Troop E has near-constant traffic and you should be able to receive it where you are even if you use a pen for an antenna, as long as the pen is metal. :-) I'm not as sure about traffic with Troop B; I would imagine you should be able to rx Troop C where you are if you have a decent antenna and there's a lot of traffic on that system.

The squelch and volume issues already mentioned are worth looking at.

What does the display show while nothing is being heard?

John Newell

Just for the record, I'd suggested scanning a conventional system (less to go wrong) at the RR forums, but if the issue is little traffic, scanning the MSP Troop E system will eliminate the issue of nothing heard because there's no traffic.

If you want to quickly tune to that frequency w/o taking up a channel, do:

HOLD, freq, HOLD (i.e. HOLD, 467.5625, HOLD)

If you programmed your scanner using software, you can add the frequency to an existing group, create a separate group for it in an existing system, or create a separate system and group for it. Then reload the data to your scanner. When you're done, delete it and any systems and/or groups that you created in the software and reload the data to your scanner.

The easier way is to just enter it from the keyboard. You can do that by pressing "Hold" and then entering the frequency from the keypad followed by "Hold" again. When you're done just hit "Scan".

BTW, that frequency is channel 8 of the Family Radio Service.

1969. Talk Group errors on upload to scanner

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-06-09 21:24:49 UTC
From: Rick Short
Topic: 1969 Message: 1969

Good afternoon:

I am trying to create a new trunked system for Nashville rebanding. I have the control channels and they are:

856.2625
856.4875
856.9875
857.2625

I have the talk groups and a couple are

800003

801309

I have tried both ProScan and ARCXT and each time I build the system in the software with alpha tag and talk group listed. It loads the alpha tag in the scanner and does not load the talk group numbers in the scanner and it erases the talk group numbers in the software. I tried manually loading the numbers in the radio with the keypad and it comes back as bad talk group id. I have tried it as a Motorola system and a P25 system. What am I missing?

Ideas and help is appreciated.

Rick

First of all, is it a P25 system or not? That will determine how it's correctly programmed. (P25 systems are still programmed as P25, and non-P25 systems are programmed as Motorola Rebanded (assuming it's a Motorola system).

The software packages may not yet support rebanded system types. I know ARC-XT is still in beta and isn't finished yet. FreeScan also has a few things left to add.

From: Uniden UPMan
Topic: 1969 Message: 1971

Those TGIDs are in "Motorola Decimal" format. You need to use "Uniden Trunktracker" format (actually, the format primarily used by all scanner brands).

Conversion and other info available at:
http://wiki.radioreference.com/index.php/Motorola_Talkgroups
 UPMan

Subject: [BCD396XT] Talk Group errors on upload to scanner

Good afternoon:

I am trying to create a new trunked system for Nashville rebanding. I have the control channels and they are:

856.2625
856.4875
856.9875
857.2625

I have the talk groups and a couple are

800003

801309

I have tried both ProScan and ARCXT and each time I build the system in the software with alpha tag and talk group listed. It loads the alpha tag in the scanner and does not load the talk group numbers in the scanner and it erases the talk group numbers in the software. I tried manually loading the numbers in the radio with the keypad and it comes back as bad talk group id. I have tried it as a Motorola system and a P25 system. What am I missing?

Ideas and help is appreciated.

Rick

If it's this system, your control frequencies don't match those shown
on RadioReference. I'd load all the frequencies and let the scanner
find the control channel.

http://www.radioreference.com/apps/db/?sid=428

Also, as UPMan pointed out, you have to convert the TG IDs, but it
may be easier to just get them from RR in the correct format than to
convert each one.

1973. GPS Scanning

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-06-09 22:52:30 UTC
From: tedrhayes
Topic: 1973 Message: 1973

Have been setting up my 396XT with GPS locations/ranges for many of my system sites and system groups. It can be a little tedious (even using FreeScan) but it is doable. I've been testing it over the last few days and am finding the GPS capability more useful than I originally thought it would be.

Today a drove from Dayton, OH, to Columbus (I70) then back to Dayton via I71. It worked just as I anticipated - need to make some adjustments on ranges on some systems.

It was interesting when I started out, with number of sites/groups for which I specified locations/ranges it took 10-15 minutes after I first turn it on and connected GPS for all the out of range sites/groups to be "Location L/O". All these lockouts are reset when the scanner is turned off.

Given the capacity of the 396XT (and soon the 996XT), it might be useful to allow the user the option to keep the location l/o's even after turning the scanner off. Then an explicit location l/o restore command could be provided. Not sure if this could be added with a firmware update, but should be considered for the future.

Go to the weather function and see if you pick up a NOAA station nearby.

Subject: [BCD396XT] Newbie BCD396XT Scanning Question

I bought the scanner and it looks like I figured out how to download frequencies into it using Freescan. Now when I turn it on I think it's scanning but I hear nothing. I live in a podunk area, maybe nothing's going on, but maybe it's either not really scanning or I can't get the squelch right. I can't figure out how to drop the squelch (like the way I used to on "older" scanners". Any ideas? Is there anyone out there or any place out there that might render me some assistence on this scanner? I live in the Sturbridge, MA area. Thanks, Roger

An easy way to convert from Moto format TGIDs to Scanner format is by using your Windoze Calculator in Scientific mode.

Type in the Moto ID without the leading 8 (so "801309" would be entered as "1309") and click the Hex button (top left corner), this should convert the TGID to hex "51D", then add a zero to that (enter "51D0") and click on the Dec button to convert it back to decimal which should give you the scanner format TGID of "20944"

Clear as mud?? It sounds complicated but once you've done a couple of thousand of them it will seem easy!

Perhaps I'm missing something, but why wouldn't you just multiply the
1309 * 16 = 20944?

No, the lockouts are retained when you cycle the power. It's no
different than you manually locking out a system (or site), except that
it's automatic.

I've learned from years of experience to hedge my bets with language
like "perhaps I'm missing something, but...". There have been lots
of times that I WAS missing something and ended up looking
foolish. Of course, I still end up looking foolish from time to time
anyway. :)

Topic: 1951 Message: 1986

Ive got a correction to make ,, I bought it from this site

http://www.scannermaster.com/

as they would give free shipping on any scanner till fathers day and 10 0ff coupon someone sent me

are these pretty good folks?

> There are quite several enhancements the xt has over the t. You should check the wiki for the radio online. You might want to get a case for the radio as well to protect it when you are on the go. I would suggest the leather case from scannemaster. Its a nice hard leather rugged case that will keep your radio investment well cared for and it looks good too. I got one myself. You might also want to get a software to program the radio. I have programed all my radios manually including the xt but I enjoy it that way. I live in Boston and its good and fun scanning here. I had the t myself and I sold it on eBay as well to get the xt. Well this is a great group and if you have any questions we are all here to help each other out including upman himself. Happy scanning! :)

Actually, GPS uses temporary lock out, not permanent.

Subject: Re: [BCD396XT] GPS Scanning

No, the lockouts are retained when you cycle the power. It's no
different than you manually locking out a system (or site), except that
it's automatic.

Joe M.

tedrhayes wrote:
> Have been setting up my 396XT with GPS locations/ranges for many of my system sites and system groups. It can be a little tedious (even using FreeScan) but it is doable. I've been testing it over the last few days and am finding the GPS capability more useful than I originally thought it would be.
>
> Today a drove from Dayton, OH, to Columbus (I70) then back to Dayton via I71. It worked just as I anticipated - need to make some adjustments on ranges on some systems.
>
> It was interesting when I started out, with number of sites/groups for which I specified locations/ranges it took 10-15 minutes after I first turn it on and connected GPS for all the out of range sites/groups to be "Location L/O". All these lockouts are reset when the scanner is turned off.
>
> Given the capacity of the 396XT (and soon the 996XT), it might be useful to allow the user the option to keep the location l/o's even after turning the scanner off. Then an explicit location l/o restore command could be provided. Not sure if this could be added with a firmware update, but should be considered for the future.

1988. Re: GPS Scanning

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-06-10 13:01:28 UTC
From: tedrhayes
Topic: 1973 Message: 1988

I thought that was the behavior I was seeing.

Another question: Is there a way to change the alert tone/screen color/flash for Location L/O and Location Unlocks?

If not it would be nice to be able to change the alert just like you can for individual channels.

Thanks, Ted

P.S.

I hope Uniden is considering including the GPS hardware in the scanner in future models. It is kind of a pain to have a separate GPS unit and all the associated cables. Also, can't tell you the number of times I've forgotten to change the Serial Port Speed when I go to connect the scanner to my computer after using it with the GPS.

The location l/o-unlock alerts can't be changed.

Putting a GPS antenna in the case of a handheld would be problematic due to size. In a mobile it would be problematic due to the antenna needing a clear shot at the sky. So, even if one were included in a future model, it would still have to have significant "out of case" components.

UPMan:

As usual you hit the nail on the head. I received the new plan in Motorola format, it looks like very few of the talk groups are changing just the frequencies. The calculator was flawless.

Thanks very much,

Rick

How about adding bluetooth capabilities Paul? This would provide some neat capabilities, e.g., GPS, handheld-to-computer syncing, etc.

And frankly the models I use are the same size as a GPS antenna. I use the 'puck' units that are only a little over one inch square.

Something I've considered doing is modifying one of my 996Ts to provide the voltage supply on the DB-9 connector so it wouldn't even require an external voltage supply - just the puck, the wire, and a DB-9 straight to the scanner. The only thing is that I would have to make sure I disable it before plugging in a PC in case the voltage would be on a 'bad pin' for that use.

As it sits now, I have a "voltage injector" between the GPS's DB-9 and the scanner's DB-9. That's still not a lot of wire clutter.

Now, a GPS internal on a handheld would be very nice...

1996. Proscan?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-06-10 21:19:40 UTC
From: willie92res
Topic: 1996 Message: 1996

Hi Folks:

Been looking at this program and especially the scanner internet feature and I am wondering if there is anyone using this that has had success in setting it up? If so, do you have some real good instructions on how to do it?

I still have a few weeks left on the 30 days and if I can get this working I am going to purchase it.

(If you like, I'll call to cover the cost of the phone call or whichever is convenient for you).

Thanks

Bill NC1L

Another issue would be battery consumption, although a menu option could be used to turn off the GPS when it is not required.

The frequency download seems to have a bug in it. Aside from this problem I really like the software.

Jim,

Can you let me know more about the bug so I get it fixed. There was a bug importing frequencies from RadioReference not formatted correctly and the fix will be in tomorrow's release.

I will be releasing the next version of ProScan tomorrow introducing the newest features; Web Server and ScanCast.

Bob Aune,
ProScan

Hello Bob,

The problem I've had is the frequencies downloaded from Radio Reference being off several decimals. An example is for Calfifornia, Fresno County, Police city of Fresno.

I look forward to the new release and will let you know if the bug got squished!

Thanks for a great program,
Jim

ProScan Testers:

ProScan 2.9.0 is out with the newest features Web Server and ScanCast.

This is a upgrade version that requires ProScan to be installed first.

Unzip and copy the files in to the ProScan folder/s.

http://www.proscan.org/ProScan_2_9_0.zip

Bob Aune,
ProScan

I can't believe I got it working!

I took my time and now it works. Only question: I have 18 quick keys but no GRPs on my bottom line. What am I missing about GRPs? Where do I assign GRP number in Freescan? Thanks for all the help or I'd probably have given up.

On the left side, click on a Group.

On the right side, the first (top left) item shown is the Group name.
The item just to the right of that is labeled Quick Key. That's the
Group Quick Key. It can be from 0 to 9.

You will love it! But seriously, I personally would not bother to program it by hand. I know people will say it is good to learn for on the fly stuff, etc., but I have yet to come across a situation with either the XT or the 396T where I had any need for manual programming. Enjoy!

Bob:

Downloaded the upgrade just fine. It also looks like you fixed the talk group decimal download error from rr.com, thanks!! One question, I have 75 systems in my configuration, many are trunked. With that many a talk group numer may be in several different systems. When using the logger it seems to log the system that is first in the list instead of the system that I am actually listening to and wanting to log. example system 19 had tg 48 as well as system 41 has tg 48 in it. I am listening to and wanting to log system 41, but the Proscan logger records it as system 19. Am I missing something or is this a bug?

Thanks very much,

Rick

Change the display mode. It has display mode 1, 2, and 3.
In free scan under each group you can assign a quick key. This is the group quick key.

I can't believe I got it working!

I took my time and now it works. Only question: I have 18 quick keys but no GRPs on my bottom line. What am I missing about GRPs? Where do I assign GRP number in Freescan? Thanks for all the help or I'd probably have given up.

--- In BCD396XT@yahoogroups.com, "Roger Davis" <rogermass@...> wrote:
>
> I bought the scanner and it looks like I figured out how to download frequencies into it using Freescan. Now when I turn it on I think it's scanning but I hear nothing. I live in a podunk area, maybe nothing's going on, but maybe it's either not really scanning or I can't get the squelch right. I can't figure out how to drop the squelch (like the way I used to on "older" scanners". Any ideas? Is there anyone out there or any place out there that might render me some assistence on this scanner? I live in the Sturbridge, MA area. Thanks, Roger

Hey Bob I'm having a problem.
I unzipped your file twice. Also rebooted the computer.
I keep getting an error (no g729.dll).
HELP.

I must be crazy then. I have programmed 23 systems by hand and can say they all work without problems. Have not figured out how many frequencies yet but it seems like I keep adding and adding and the memory just doesn't go away. How cool! I will admit though when alpha tagging the frequencies and TG's THEN it gets long winded. Software would surely help there. Anyway, it can be done and in my case it has been done and it helps me to understand the scanner out in the field if and when a problem might occur.

crazy

You will love it! But seriously, I personally would not bother to program
it by hand. I know people will say it is good to learn for on the fly
stuff, etc., but I have yet to come across a situation with either the XT or
the 396T where I had any need for manual programming. Enjoy!

Enable the SQK for the System you want to scan. There should be a list
of SQKs in the manual for the preprogrammed Systems.

2020. Re: ARC XT PRO software

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-06-13 15:09:30 UTC
From: randybcd396t
Topic: 1896 Message: 2020

I downloaded the demo version, version 0.91 build 1, and can't make it work.

I can connect to the scanner using the auto detect feature.

When I try to download systems from my scanner, it starts to read the systems and then goes into a loop with dialog boxes popping up. I have to turn off the scanner to stop the loop. The error dialog boxes say:
check #1
check #4
loop timeout

Anyone else see this problem? Is there a way to make it work?

Thanks...
Randy

> Scanners Unlimited sent me a URL link to their store which allowed me to download the beta version of Butel's latest software. It says it is good for 30 days for evaluation purposes before it must self destruct or something. I don't know because I paid up front and got the address in an email. Since I already had my registration numbers to plug in when I downloaded the software, I didn't wait to see what would happen if I ran it for 30 days. Of course, like I said, I purchased my copy up front. It may be that the download capabilities from Scanners Unlimited are guarded due to what may be percieved as loosing business. But on the flip side of that coin, If it were me, I'd be giving out that download to as many people as possible, given the compitition, Free Scan, (to name the cheapest one), is so powerfull and costs nothing. Let people try the $70 pro version or the cheaper one in the hopes they get hooked it.
>
> You will notice I did not list the download page from Scanners Unlimited. And for all I know it may be available without calling them an asking for it. But If it is, I will let Scanners Unlimited say it. Afterall, it's their commercial website representing their business which helps keep people employed. In this economy I don't want to be the one to contribute to the loss of a livelyhood. things are tough enough out there for a lot of us. Just look at Scanner Master. I understand the owner retired? If it was a going conern, someone would have seen a chance to make a buck and buy out the business.

You'll probably have better results if you ask this question on the ARC396 Yahoo group as its primarily
for ARC software.

Craig -

I fumbled around on that one, too.

Go to http://info.uniden.com/twiki/bin/view/UnidenMan4/BCD396XT
and under Quick Start, click on Using Preloaded Systems. There, you'll find
that the System Quick Key for Alaska is 21. On the radio, while scanning,
press .no, then 21. That will turn Alaska off and you should be in business.

Does anyone else have problems with a real tight belt clip? I'm referring to the swivel section that the radio's metal boss fits into. I have really push it hard to get it to "click" and it is real hard to rotate it to invert to remove it from the clip. It is so tight that it winds up loosening (unscrewing) the metal boss, even after tightening back up. I have a 396t also and it is not like this. I expect it to me more snug (being new) than my 396's clip but this is crazy.

Yes I have. Becareful with it. Make sure you flip the radio upside down when you want to remove the clip. Do it clockwise as you spin the clip and then move it upwards and there is no strain with it. Be careful with it. Good luck! Put it back the same way too. Observe the instructions to the letter.

I live in the pompano/deerfield area and have a BCD396XT. It has motorboating on the Boynton channels and to a lesser extent Delray. I have fixed an issue with Hollywood PD channels motorboating on it by changing the channel type from ANALOG to ALL.

NOTE: I receive Boynton much better than Boca which is strange since Boca is so much closer to me.

It was programmed with FreeScan (version.09B) and has the P25 timeout set at 400ms.

What other options are available to stop this motorboating?

Thanks in advance
Jeff

CLC codes? For the USA? They use SAME codes which are based on the FIPS codes. And there are Event codes for specific events. Never heard of CLC codes.

If you have any digital channel set for ANALOG ONLY, it won't even attempt to decode the P25 data. The scanner was simply doing what you told it to do - no decode P25.

If you want to hear P25 only and stop virtually all motorboating, set the channel to DIGITAL ONLY.

HI Jeff,

It sounds like your listening to Florida systems? Motorola mixed-mode because they have analog channels too. Must be Broward Co.
http://www.radioreference.com/apps/db/?sid=212

You need to save the talkgroups and change them to analog for the analog only talkgroups and digital for the digital only talkgroups. However it doesn't look like you have any digital talkgroups listed in the database. That should help with the motorboating unless you are getting a strong interference from another system that effects the signal on the Boca system. In with case maybe the attenuator would help somewhat. It doesn't appear to be a simulcast system.

Crazy? That I cannot answer since I don't know you. I will however say you are the kind that want's an award for doing things the hardway. The program is free. I have programmed mine over and over as I keep making changes, finding little mistakes that I want to correct, so crazy again I can't say, foolish that I can say. You cannot do better by hand than you can with a screen in front of you with all the spellings, freqs. right there. Now if you live in a very rural area and are progamming the local pd/fd on their one or two channels and that is it maybe and I say maybe.

My radio is about 20% full. I have posted a file in the file section and will update it periodically. It covers the South Florida area and anyone who is coming to this tourist area it's out there for you to use.

>
> I must be crazy then. I have programmed 23 systems by hand and can say they all work without problems. Have not figured out how many frequencies yet but it seems like I keep adding and adding and the memory just doesn't go away. How cool! I will admit though when alpha tagging the frequencies and TG's THEN it gets long winded. Software would surely help there. Anyway, it can be done and in my case it has been done and it helps me to understand the scanner out in the field if and when a problem might occur.

Jeff, since in the three cities, Boca Raton, Delray Beach and Boynton Beach there is mixed use make sure all are set for ALL. In my opinion all systems except true P25 should be set for ALL.

BTW, the Palm Beach Co. digital talkgroups in use are all encrypted so don't worry about trying to get them.

Interesting. gcr33, so your saying the forced analog flag has no effect? Is the analog flag result worse, causing more motorboating than ALL on analog? Is there more, less, or no motorboating with ALL?

From: JAN FINE
Topic: 2033 Message: 2044

He stated he is listening to Boca and Delray.
Boca PD & Boca FD are Digital
Boca LG are Analog.
Boynton PD & FD are Digital
Boynton LG are Analog.

Set the Digital talkgroups to DIGITAL ONLY
and Analog talkgroups to ANALOG ONLY

HI Jeff,

It sounds like your listening to Florida systems? Motorola mixed-mode because they have analog channels too. Must be Broward Co.
http://www.radioreference.com/apps/db/?sid=212

You need to save the talkgroups and change them to analog for the analog only talkgroups and digital for the digital only talkgroups. However it doesn't look like you have any digital talkgroups listed in the database. That should help with the motorboating unless you are getting a strong interference from another system that effects the signal on the Boca system. In with case maybe the attenuator would help somewhat. It doesn't appear to be a simulcast system.

Have not figured out how many frequencies yet but it seems like I keep adding and adding and the memory just doesn't go away. How cool! I will admit though when alpha tagging the frequencies and TG's THEN it gets long winded. Software would surely help there. Anyway, it can be done and in my case it has been done and it helps me to understand the scanner out in the field if and when a problem might occur.

Changing to Digital on the Digital Only channels along with moving the analog channels to ALL solved 99% of the motorboating on the 396XT.

2052. ARC XT PRO wont download

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-06-16 20:53:57 UTC
From: Rick Short
Topic: 2052 Message: 2052

I purchased ARC XT Pro and installed fine. In addition it connects and reads the 396xt radio just fine. When I go to download, I select my systems and either try erase first or overwrite and then hit send....it says erasing system 74, the last one I have but it sits there and will never progress and complete. I had ProScan and FreeScan before the ARC XT and they both work fine upload and download. Anybody else with this issue or ideas on how to fix?

I have used ARC 250 and ARC 396 before with no issues.

Gommert, help please!!!

Try using FreeSCAN version 0.9B www dot scan scannow dot org it works beautifully with the scanner whether you are using the USB-1 cable or regular RS232 cabling.

i appreciate it i will search the previous messages before i ask so as not to clog things up

i dled proscan today and loaded up my 396xt with the load that was in my 396t before i sold it
\
i need to search the alpha tagging of systems it appears to be a little different than the 396t this one has

quick key

number key

and

startup key
 will need some research on my behalf i know what a quick key is

but not number key and startup key i need to get reading LOL

May I again ask you to post your files and share with others the information you have worked hard to receive. Sharing helps everyone. It's free and you might need it sometime if you are taking a trip, etc.

Startup Key is a way to initially lock or unlock certain systems when
you power-on the scanner.

Number Key is a way to quickly access a particular System if you're on a
different System.

Yes, but the scanner will also remember the lockout state if you cycle
power. Also, it only affects systems with StartUp Keys assigned.

2068. System startup key numbers

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-06-20 18:50:16 UTC
From: Jim Walls
Topic: 2068 Message: 2068

I want to make sure I'm not missing something here. I quite regularly use one of two operating configurations for either my 396XT or 996T scanners (both scanners are programmed for the same FreeScan file). I had never done anything with System Startup Keys, but it seemed like it would be very useful. Last night I set startup two keys for the systems that I regularly use (keys 1 and 2) and set everything else to startup key 0 (solely to turn them off). Programmed the 396XT and am playing with it. Sure enough when I powerup with startup key 1 or 2, I get the systems with those startup keys, but I realized I get a horribly undesired consequence. All the rest of the systems are locked out, and not "System Quick Key off". That now makes it a royal pain in the A$$ to turn anything else on as I have to go through the 9 step process to unlock a system so that I can use it (yes, I counted how many steps it takes to unlock a system).

This unfortunately make the System Startup keys totally worthless as I operate under the belief that I can't comprehend why anyone would normally use System Lockouts instead of System Quick Keys. Lets see, go through a 9 step process that requires reading the display multiple times to lock or unlock a system, or on the other hand press a single button (or three for System Quick Keys above 9 - and yes, the ones I normally use are all single digit).

It looks like Uniden made the really cool feature with Startup Keys and then implemented it so badly that it's useless...

Am I missing something here????

It's forte is when you're in a completely different area. I have three areas programmed - SW OH , SC OH, and SE OH. These are areas that I would never want to scan otherwise, so StartUp Keys work fine.

They are not meant for Systems you want to individually enable/disable. You can just program them with NO StartUp Key to maintain the ability to turn them on and off individually or via GPS.

2071. P25 system stops decoding

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-06-21 01:56:49 UTC
From: Larry Koch
Topic: 2056 Message: 2071

Twice since installing version 1.07.00 I've had my scanner stop decoding P25 CC. The radio is always powered up and no one is near the buttons. I am scanning a P25 simulcast system with over 100 talk groups.

During normal scanning the 3rd line of the display shows the freq of the control channel when there is no activity. When there is activity the 3rd line shows the freq that the talk group is using and a "P-25" at the end of the line.

When the radio stops decoding the 3rd line displays "NFM" and nothing else. If I push the HOLD button I will hear the CC.

Any ideas?

Take all of those systems you have set to Startup Key 0 and set them to have no startup key. It will then do what you are wanting to do.

Subject: [BCD396XT] System startup key numbers

I want to make sure I'm not missing something here. I quite regularly use one of two operating configurations for either my 396XT or 996T scanners (both scanners are programmed for the same FreeScan file). I had never done anything with System Startup Keys, but it seemed like it would be very useful. Last night I set startup two keys for the systems that I regularly use (keys 1 and 2) and set everything else to startup key 0 (solely to turn them off). Programmed the 396XT and am playing with it. Sure enough when I powerup with startup key 1 or 2, I get the systems with those startup keys, but I realized I get a horribly undesired consequence. All the rest of the systems are locked out, and not "System Quick Key off". That now makes it a royal pain in the A$$ to turn anything else on as I have to go through the 9 step process to unlock a system so that I can use it (yes, I counted how many steps it takes to unlock a system).

This unfortunately make the System Startup keys totally worthless as I operate under the belief that I can't comprehend why anyone would normally use System Lockouts instead of System Quick Keys. Lets see, go through a 9 step process that requires reading the display multiple times to lock or unlock a system, or on the other hand press a single button (or three for System Quick Keys above 9 - and yes, the ones I normally use are all single digit).

It looks like Uniden made the really cool feature with Startup Keys and then implemented it so badly that it's useless...

Am I missing something here????

I can "hear" a couple of distant control channels but apparently not well enough to decode them, I am guessing your signal strength is dropping to the point where the scanner either can't use the data any more or it falls below the squelch threshold?

Not at all. Since Startup Keys turns systems on and off using the System Lockouts rather than System Quick Key on or off, it's worthless to me. As I said in my original message, I can't come up with ANY reason EVER to use System Lockouts in place of System Quick Key on or off. A 9 step process to lock or unlock a system vs 1 button (or 3 buttons for the lesser used ones) makes that a total no-brainer.

I have four major configurations. All four configurations use only S Quick Keys 0-9 (so I can do everything with one-press SQKs):

SK1: Systems programmed the way I listen in the office. These are all systems that have no GPS enabled and includes Dallas, Denton, and Eastern Tarrant counties.

SK2: Systems programmed with GPS, including GPS control down to the PD patrol district area for most of the DFW area. Scanning this configuration at home or car is problemattic, as it includes way too much stuff to actually be able to follow it.

SK3: Systems programmed the way I listen at home. These do not include any Dallas County systems but do include Johnson County and Tarrant County except for the northern systems.

SK4: I use this for "Travel" systems. For example, I'll be in San Diego this week. When I get there, I don't have to pull out the laptop and change configurations, I'll just power up pressing 4 and all DFW will be locked out.

Topic: 2056 Message: 2077

I just had the same failure here after V 1.07. My 396T gets the P25 just fine.
Re-entering the P25 System definitions or copying the 396T entries to the XT fixes the problem temporarily.

http://info.uniden.com/twiki/bin/view/UnidenMan4/BCD396XTFirmwareUpdate
the Revision Note says -

This update makes the following changes to your BCD396XT scanner:

a.. Remove the option for Control Channel Only for Motorola systems. All Motorola systems are trunked using Control Channel Only...this setting is unnecessary.

Is there a way to back out of 1.07?

Hello!

... And if i may add: even though i don't have a 396XT (still with my 4 years old BCD396T), the one reason i see use of lockout systems is => for systems merely used, not even enough often to justify to allow them a key *but* still want to have them handy *in the radio* (no PC required) <=

like this system i created for Quebec Air Show, an event which is 300km from here, and happens at 2 years interval: i was there last year, will probably be there next year, but i keep it in my 396 just "in case", but can't afford to allow it a Quick Key.

Or like a system comprised of about 40 conventionnal freqs for our forest firefighters: even though i have their most current VHF repeaters freqs by region in the 396, i still have this system with all their VHF freqs (past and present) without CTCSS, that i like to run once a year, at the end of spring/early summer as they sometimes change freqs/tones in some regions; here also, don't want to waste a Quick Key for this casual use...

You could try cloning the XT that works to the XT that doesn't work...

(Back up your original programming first.)

The first time it happened I reloaded the profile from my PC using Freescan. I use the same profile on both radios.
This time I played with the "close call" option and eventually it started working. I don't know what sequence of buttons I pushed to fix it since I was just pushing buttons at random. The next time I'll try to pay closer attention to the button sequence to fix it.

How about setting up a search range in custom search mode.
Make sure it is set to CC Only. Set the range from 851-868.9875.
You can leave it on that and drive. You will hear most trunked systems. When you can look down the scanner will tell you what you are listening to.

Hello All

after a week, of trying to convert my 396t sites to the 396xt i got it all done ,

what i did was used , Proscan software imported the systems i had saved in the old version of uasd off my 396t and uploaded the systems to the xt

i got it all done and i notice my 396xt, while scanning systems, about every few seconds says "Unnamed site"

it took me 2 years to get used to the system archetecture from banks and channels, im an over 20 year uniden customer one of my first scanners was a bc200xlt,

going from banks and channels to systems, groups, and the like was pretty hard ,but i managed,,

now i have to get used to

GPS feature enablin and disabling

temporary lock out

and NO paper manual

i looked over the manual on my laptop but its just not the same

LOL iguess thats what being 43 years old does for ya i guess

can any one tell me what Unnamed site means? I searched the PDf manual and no resiults for "unnamed site"

THank you group

the 396t group now saved my behind and fumbling fingers several times

hope i can find the guidance here to

Might be worth it to do a reset on the scanner then reload the
programming. If it is something that isn't 'set right' in the firmware,
that could fix it.

It's most likely a Site you have programmed in your scanner that you didn't program a name for. If you have software, look at all the Site names to see if there is one that is blank. It's going to be a trunked system, so that may narrow it down some.

Good thought. When (if) it happens again I'll try that.

I'm setting here now playing with the one with v 1.04. I've managed to get the HOLD msg on the first line to flash. Now I don't know how to stop it from flashing. I was playing with the close call function. If I don't figure it out soon I'll just re-load it.

Topic: 2088 Message: 2088

Hi All,

Does the 396XT have a discriminator output from the factory?

Is their a data output to recover the unfiltered signals? If so from where? Headphone jack? USB line port?

Would like to use with UniTrunker.

Thanks in advance for your comments.

Greg

The flashing HOLD is System Hold. It turns on and off by an extended
press on the HOLD button.

It's possible that it's a site name that you entered into the
programming that didn't get transferred properly to the scanner so it
might be worth trying another upload to the scanner.

Hold the HOLD button for a few seconds. You activated the System hold.

Serial port on the side of the unit - same one you use for programming.

> Would like to use with UniTrunker.

This will only work with trunked systems the scanner supports. I believe Unitrunker does 'understand' the data output from the XTs.

Now for my clarification does every trunk system and every conventional system have to have a site name? or is it just every trunk system

I did a search of the manual .pdf and i didnt see the term "unnamed site" in the whole manual

 ill try another system upload and give that a shot

thanks for the fast input

2094. 396XT ID Group Search

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-06-22 09:25:14 UTC
From: Eric
Topic: 2094 Message: 2094

Will the 396XT ever have ID Group searches? Most trunking systems have a certain set of numbers assigned to a agency, (example 34000 to 35000 may have been law enforcement or 36000 to 37000 maybe fire dept group codes) My question is this, why can't the 396XT search between let's say 34000 to 35000 only to pick up only certain ID group codes?
As more metropolitan areas get bigger and use trunking as a form of communications this would help find ID groups much faster. Just thought I would throw this into the group postings, then Uniden might have a download for this, if enough persons ask for it. Thanks for your time in this matter.

Wrong. Unitrunker is not set up yet to work with the xt models.
It will be as soon as the guy writting the program has time to add that feature. He has been busy but will get around to it. I'm also waiting on that.

What you are asking for is to have the ability to do wildcard searches with a Moto system like you can with EDACS. No scanner thus far has had that capability. It would be neat if it can be done.

Subject: [BCD396XT] 396XT ID Group Search

Will the 396XT ever have ID Group searches? Most trunking systems have a certain set of numbers assigned to a agency, (example 34000 to 35000 may have been law enforcement or 36000 to 37000 maybe fire dept group codes) My question is this, why can't the 396XT search between let's say 34000 to 35000 only to pick up only certain ID group codes?
As more metropolitan areas get bigger and use trunking as a form of communications this would help find ID groups much faster. Just thought I would throw this into the group postings, then Uniden might have a download for this, if enough persons ask for it. Thanks for your time in this matter.

You may want to experiment with UniTrunker again, Jan.
It works with Trunk88 and Pro96Com if I put the control channel frequency in a system and then park on it in the manual mode. I have not had any luck with UniTrunker, but others may if they use this method. Just holding on a control channel frequency in the direct "quick search" mode or in a user search does nothing at the output. Only if it is saved to a system and then put in the hold mode will the data go to the port.

Apologies if a for-sale post is bad form. I didn't see anything about it in the group rules.

I am selling my BCD396XT. There is nothing at all wrong with the scanner - it is a very impressive unit. It's my first scanner and I am not as enthused with the whole "scanning" thing as I thought I would be. Too many hobbies and too little time.

Includes:

BCD396XT in excellent condition, with box and all standard accessories
Uniden Nylon case
Car cigarette lighter adapter
USB adapter cable
WSMA-801 Reg. gainer antenna
Diamond SRH77CA SMA antenna

$475 shipped CONUS.

Thanks,
Dave
SLC, UT

"unnamed site" won't be in the O/M, as that is not something the scanner generates. That is either the name of the site as d/l'd from RadioReference or the software you are using has used that as the name for a site.

It's possible that it's a site name that you entered into the
programming that didn't get transferred properly to the scanner so it
might be worth trying another upload to the scanner.

2101. C-CH Output & Adjust Audio AGC

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-06-22 17:57:57 UTC
From: SRehm24416@aol.com
Topic: 2101 Message: 2101

In the "settings" menu there are two settings to choose from that I am not really sure on. Could anyone enlighten me?

1. Set C-CH Output. Has three settings. Off - On - Extend. What are these settings for and why, or why not, would I need to set or change?any of them?

2. Adjust audio AGC. Has two levels of choice. Analog and?digital. There are three choices. Time - Gain - Range. Again, what are these settings used for and why, or why not, would I want to change the settings.?

This does not seem to be covered in the, ahem, cough, manual. I am sure it says they are there just not how or why to use them.

Thank you

?

This is to use the data output features. ON and EXTEND will output the
data to the side connector for use by programs such as PRO96COM or the
like (PC programs to display the trunked system data).

> 2. Adjust audio AGC. Has two levels of choice. Analog and?digital. There are three choices. Time - Gain - Range. Again, what are these settings used for and why, or why not, would I want to change the settings.?

Those affect how the AGC will react, and in most cases you would not
need to change those.

Hi,
  You aren't the only one who was confused by DMA...I'm even older (45) and been listening to scanners for 30 years (I actually heard the Avianca crash rescues on Long Island when I lived in SW Connecticut). I started with a crystal controlled 8 channel regency scanner.

I didn't get the DMA programming method until I used FreeSCAN and did an import from Radio Reference.

 My "Logical Guess" for Unnamed group is that you accidentally created group with a blank name.
1) Check current Proscan DB for blank group names.
2) Download the current scanner config into a new proscan database and check.
3) Check the groups within the scanner itself by system. - Assuming you programmed each trunked site as its own system all you need to do is find out which trunked system the "Unnamed group" is coming from and go into that system and check that the group names are all programmed properly.

Also you may want to check Close Call settings but this is a pure guess since I use the 396XT as a base scanner and don't know Close Call settings at all.

Hello All

after a week, of trying to convert my 396t sites to the 396xt i got it all done ,

what i did was used , Proscan software imported the systems i had saved in the old version of uasd off my 396t and uploaded the systems to the xt

i got it all done and i notice my 396xt, while scanning systems, about every few seconds says "Unnamed site"

it took me 2 years to get used to the system archetecture from banks and channels, im an over 20 year uniden customer one of my first scanners was a bc200xlt,

going from banks and channels to systems, groups, and the like was pretty hard ,but i managed,,

now i have to get used to

GPS feature enablin and disabling

temporary lock out

and NO paper manual

i looked over the manual on my laptop but its just not the same

LOL iguess thats what being 43 years old does for ya i guess

can any one tell me what Unnamed site means? I searched the PDf manual and no resiults for "unnamed site"

THank you group

the 396t group now saved my behind and fumbling fingers several times

hope i can find the guidance here to

HEY great to meet someone doing it a while like me,

well ive fooled with the DB in proscan and the radio itself by hand for 3 hrs today (now granted im not brightest bulb in the pack) LO

But heres what ive found so far

1 no un named groups
2 i did find in all trunked systems the first group in all trunked systems has the frequncies, and is UNNAMED

i changed that in the proscan DB to call it something to stick out at me like edacs one, or the like

 and now its half correct the new group name appears as i did it (edacs one) but it scrolls that then goes to Unnamed Site On every trunked system,

i checked the sites on the radio and the only one ther is the one i made (edacs one)

but it still goes past that then Unnamed System

there are no un named groups in that particular system, i checked the radio and this un named site does NOT occur during the scaning of a conventional system

  i checked my close call as suggested that is OFF as well

it does not make a difference if its moto , edacs, analog or digital , if its a trunked system it goes past the site name i make to UNNAMED site,

argh thanks again this is turning out to be a god send like the bc396t group was for me ,, you have at least got me as far as putting in the site name on the freq group and that works but then UNNamed site

thanks again group

Hi,
  You aren't the only one who was confused by DMA...I'm even older (45) and been listening to scanners for 30 years (I actually heard the Avianca crash rescues on Long Island when I lived in SW Connecticut) . I started with a crystal controlled 8 channel regency scanner.

I didn't get the DMA programming method until I used FreeSCAN and did an import from Radio Reference.

My "Logical Guess" for Unnamed group is that you accidentally created group with a blank name.
1) Check current Proscan DB for blank group names.
2) Download the current scanner config into a new proscan database and check.
3) Check the groups within the scanner itself by system. - Assuming you programmed each trunked site as its own system all you need to do is find out which trunked system the "Unnamed group" is coming from and go into that system and check that the group names are all programmed properly.

Also you may want to check Close Call settings but this is a pure guess since I use the 396XT as a base scanner and don't know Close Call settings at all.

Hello All

after a week, of trying to convert my 396t sites to the 396xt i got it all done ,

what i did was used , Proscan software imported the systems i had saved in the old version of uasd off my 396t and uploaded the systems to the xt

i got it all done and i notice my 396xt, while scanning systems, about every few seconds says "Unnamed site"

it took me 2 years to get used to the system archetecture from banks and channels, im an over 20 year uniden customer one of my first scanners was a bc200xlt,

going from banks and channels to systems, groups, and the like was pretty hard ,but i managed,,

now i have to get used to

GPS feature enablin and disabling

temporary lock out

and NO paper manual

i looked over the manual on my laptop but its just not the same

LOL iguess thats what being 43 years old does for ya i guess

can any one tell me what Unnamed site means? I searched the PDf manual and no resiults for "unnamed site"

THank you group

the 396t group now saved my behind and fumbling fingers several times

hope i can find the guidance here to

As someone else already stated, "Sites" are only used in Trunked systems,
not in Conventional systems.
One Trunked "System" can have several "Sites". Like a statewide "System"
can have several "Sites" as in several cities within that state but it's
all ONE big System. So name the "Sites" the same as the city name.

Thank you for the help. I stand, ahem, corrected. Smile. I was thinking along the lines that the serial port adjustments set how the scanner sent out it's signal. Did not know there was another setting to go along with it. But then again I am not using software at this time.

Thanks again.

Subject: [BCD396XT] C-CH Output & Adjust Audio AGC

In the "settings" menu there are two settings to choose from that I am not really sure on. Could anyone enlighten me?

1. Set C-CH Output. Has three settings. Off - On - Extend. What are these settings for and why, or why not, would I need to set or change?any of them?

2. Adjust audio AGC. Has two levels of choice. Analog and?digital. There are three choices. Time - Gain - Range. Again, what are these settings used for and why, or why not, would I want to change the settings.?

This does not seem to be covered in the, ahem, cough, manual. I am sure it says they are there just not how or why to use them.

Thank you

Hi Folks,

The June edition of MT has a written article on the 396XT. The article has a sentence that highlights the compatibility of the BC-RH96 or "remote head" and the 396XT.

Has anyone had any luck with this. I went to uniden's website to look for firmware to tie the two together but no luck.

I would appreciate any feedback on this issue.

Thanks,
SJE

Topic: 2084 Message: 2119

Thank you to sir

after following yours and another attempt, i did that and went to the site and edited the name
then saved it , entered it by hand , saved it then hit scan it then scanned the name i just made and still went to un named site so,, i deleted the site entered the one my self and it still does it

now when i look at the un named site on proscan it shows the first group in a system as the one with the system frequencied and no site name in fact it says UNnamed site so i treied it in the program and named it xyz
there are NO more sites in this system it scans xyz then unnamed site

i also checked to make sure i dont have 2 systems with the same sqks and do not , another observation

is that his occurence , (unnamed site) is only on trunked systems and its on ALL trunked systems , i make either by hand or with proscan,, if i make a site named whatever it will during the scanning process, show this site i name by hand then it shows unnamed site right after that ,, it scans ok no problem but just defaults to un named site

You can edit the name of the site. Go to "Program System" and work your wat
to "Edit Site" .

You seem to be interchanging the terminology a bit which may be part of the problem. In a trunked system there are one or more sites and there can be one or more groups. The frequencies are entered for each site. Talkgroup IDs are entered into the groups.

In ProScan for trunked systems the data is arranged as follows:

SYSTEM A SYS MOT where MOT stands for Motorola if that's the type of system
SITE A SIT FREQ 5 where 5 is the system quick key assigned to site A
868.xxxx CHN where 868.xxxx is one of the frequencies for site A
868.yyyy CHN where 868.yyyy is one of the frequencies for site A
SITE B SIT FREQ 5 where 5 is the system quick key assigned to site B
868.zzzz CHN where 868.zzzz is one of the frequencies for site B
867.aaaa CHN where 867.aaaa is one of the frequencies for site B
GROUP A GRP TGID 1 where 1 is the group quick key for group A
DISPATCH CHN this is the name assigned to the first talkgroup (channel) of group A
TACTICAL CHN this is the name assigned to the second talkgroup (channel) of group A
GROUP B GRP TGID 2 where 2 is the group quick key for group B
etc.

As you can see (if my formatting doesn't get messed up in transit), the sites and the groups are listed with the same indention, but they are different animals. You should make sure that you have assigned a name to each system, site, group, and talkgroup (channel).

For a conventional system it's simpler because there are no sites so it looks like this:

SYSTEM B SYS CNV 2 where CNV indicates that it's a conventional system and the 2 is the system quick key for the system
GROUP A GRP FREQ 1 where 1 is the group quick key for group A
DISPATCH CHN this is the name assigned to the first frequency (channel) of group A
TACTICAL CHN this is the name assigned to the second frequency (channel) of group A
GROUP B GRP FREQ 2 where 2 is the group quick key for group B
etc.

In this case you need to have names for the systems, groups, and
frequencies (channels).

I hope that this is helpful.

If you'd like to email your ProScan datafile to me, I'd be happy to
take a look at it and see what I can spot that might be causing your
problem. You can try sending it just as the text file that it is,
but if you know how to zip it, that would probably be a better way to
assure that it makes it unchanged through the email system.

Groups in trunked systems don't have frequencies. Sites have
frequencies. You need to distinguish between groups and sites. They
are in the same list, but they are not the same.

> in fact it says UNnamed site so i treied it in the program and named it xyz

You can have more than one system share a system quick key. That's
not a problem.

Be sure to name the system and the site. And the groups, of course.

2125. Telescoping Antenna for 396XT

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-06-23 03:25:35 UTC
From: Jim Meyer
Topic: 2125 Message: 2125

About a week ago I bought the Watson WSMA-889 telescoping antenna. My first impression was that it appeared well built, folds small and ascetically pleasing to my eye. I found I could more easily store the radio in a small camera case with this antenna mounted. The reception has been just great and I'm very pleased with the performance.

Jim

I think a download is an excellent idea since from what's been posted
there have been changes made via software and also directly on the
scanner. As mentioned in (I believe it was) Joe's previous post,
there may be some duplication or conflict at this point. A download
to either ProScan or FreeScan would show what's actually there at this point.

Worst case, can you DL and install FreeScan, read the scanner, then post
the file to the FILES section of the list?

2131. Battery Charge Times

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-06-23 04:11:15 UTC
From: Jim Meyer
Topic: 2131 Message: 2131

What do you have you battery charge time set for? Why?

I currently have mine set at 5 hours. I worried about overcharging them when I had it set higher. I didn't see anything in the manual that told the mA of the charge, just the time that it received it.

Jim

What you need to do is to download the contents of the scanner into ProScan and save that file. It would be helpful if you could do the same thing with FreeScan since I've had better consistency with uploads and downloads with FreeScan.

I usually let them run down to nothing then use 16 hours for charge time. It seems to give me the best results. Remember if you unplug the scanner at any point the Charge Time Remaining Clock Restarts.

that may well be a possibility i wil chcek in the radio by hand,, under Func+Program systems will it show 2 systems or will they ride on top of each other example

if i had 2 systems called kcpd will there be 2 entries under the programs system listing called kcpd?

Hi Folks,

The June edition of MT has a written article on the 396XT. The article has a sentence that highlights the compatibility of the BC-RH96 or "remote head" and the 396XT.

Has anyone had any luck with this. I went to uniden's website to look for firmware to tie the two together but no luck.

I would appreciate any feedback on this issue.

Thanks,
SJE

Try the new Download/Fix name/Upload to the scanner. Make sure you click on erase all systems in memory when you upload to the scanner as this will erase all the old programming before uploading the new info.

I have it disabled and use an external charger.

Typical cells (around 2200 mAH) should take 14 hours to charge in the scanner IF they are fully discharged. All cells should be discharged before recharging.

It's definately you. It takes time to learn the scanner. Especially for someone that has no experience using a DMA scanner, listening to Digital, or using the software. If you are a member of www.radioreference.com you can download anything you want into FreeScan software and load it right into the scanner. It's the most sensitive scanner to every hit the market. I live in SW Broward County all the way west in Miramar. I'm now listening to Palm Beach County TRS on a rubber duckie. This is not normal. Conditions are good. But things I could never hear I can hear with the xt scanners.

Subject: [BCD396XT] Not Impressed with the BCD396XT

Hi All,

Maybe it's just me, I have the new BCD396XT scanner, my first digitial, DMA etc...I also have the BC245XLT and the BC780XLT, and have enjoyed them both. I decided to get into the digitial world with the BCD396XT. I found this user group and a file on here for my area (Atlanta). I finaly figured out how to use FreeScan to load the file into the scanner, some of the frequencies were incorrect, so I looked on RadioReference web site and even some of there frequencies were incorrect so I copyied them from my trusty BC245XLT and set up the 369XT. So far I have had the scanner about a week, I live in north Newton County, which you can't monitor anymore because they went to SkyLink or something like that, I can barely hear Rockdale and I have to be IN Dekalb County before I can hear anything there. Also when i'm in Dekalb County listening to them the audio sounds garbled, and most of the time unledigable. The audio also Echos sometimes. I know Dekalb is on the digitial AP25 system, and Rockdale is not. Rockdale sound ok.

So am I doing something wrong or did I purchase the wrong scanner?? I have liked and used Uniden scanners for as long as I can remember, and they have always worked great. However this 396XT that I have is far from great, it's like the receiver is just not sensitive enough to hear the signals.

I am a Ham Operator, (since 1987) so I know a little about receiver sensitivity, and the likes.

Thanks in advance for any help.

Well I don't know what else to do. It's true i'm new to DMA, and I am a member of www.radioreference, but not a premier member, I'm not sure why that's important, to be a premier member. With my old scanners I could use ScanControl and the datagrabber feature and highlight, copy and load any thing I wanted into scancontrol and then load it into the scanner. For some reason I can't do the same with Freescan. I am also waiting for Scancontrol to update there software to support the 396XT.

So then in your opinion I have something set up wrong, if that's the case the file I used came from this users group, which I had to update some of the frequencies because they were wrong.

All things concidered above, i'm not sure what to do next, can you enlighten me?

Thanks,
Hamradionut

There's not much chance you missed this, but you don't have the attenuator set 'on' by any chance? The sensitivity of this radio is way up from previous models, right on par with the GRE radios. Your experience is not typical, so asking here is a good idea. The Uniden product manager for this radio reads this list - he may have ideas.

Good luck and persevere

I decided to get into the digitial world with the BCD396XT. I found this user group and a file on here for my area (Atlanta). I finaly figured out how to use FreeScan to load the file into the scanner, some of the frequencies were incorrect, so I looked on RadioReference web site and even some of there frequencies were incorrect so I copyied them from my trusty BC245XLT and set up the 369XT. So far I have had the scanner about a week, I live in north Newton County, which you can't monitor anymore because they went to SkyLink or something like that, I can barely hear Rockdale and I have to be IN Dekalb County before I can hear anything there. Also when i'm in Dekalb County listening to them the audio sounds garbled, and most of the time unledigable. The audio also Echos sometimes. I know Dekalb is on the digitial AP25 system, and Rockdale is not. Rockdale sound ok.
>
>   So am I doing something wrong or did I purchase the wrong scanner?? I have liked and used Uniden scanners for as long as I can remember, and they have always worked great. However this 396XT that I have is far from great, it's like the receiver is just not sensitive enough to hear the signals.

I have not had any luck with pro96com or trunker88. I am using the BCD396XT with the serial port. I set the pro96 to com 1 115000 speed, I tried the cc standard and extend. I did not see any way to make changes in trunker88 for a setup. What am I missing?

Thanks John for your reply,
No I have used FreeScan to go through all the settings and there is not any attenuators of any kind turned on.

HamRadionut

Topic: 2153 Message: 2153

I found it and thanks to a post from this group

i spent another 3 hours today fooling with is , and what it is is

at some point, with either freescan OR the proscan uasd System import feature, it put 3 of the very same systems in the very same place , and when i went into the prog system , in the radio i could not see the other 2 systems only ONE of htem in freescan Que system List i could see 3 of the very same systems in the very same place , I deleted 2 of them and the problem went away,
when i changed the site by hand in program sys setting i would change the site name and it would only change it in the one system and the other 2 systems in the same place still said unnamed site but i could not access them from the scanner only from inside the softeware with the que system setting

THANK you UP mam, mr victor MCH and all the others who directed me in the right way with the check the software inquirey and i seen 3 of each systems, when you hit program system setting from the radio keypad you could only see one system but there were 3 of each and when i named the site which i thought was the one there were 2 more not named hence the back to un named site indication, but i will rename the resto f the radio tommorw im wiped out thanks again group;!!

Hi,
  You aren't the only one who was confused by DMA...I'm even older (45) and been listening to scanners for 30 years (I actually heard the Avianca crash rescues on Long Island when I lived in SW Connecticut) . I started with a crystal controlled 8 channel regency scanner.

I didn't get the DMA programming method until I used FreeSCAN and did an import from Radio Reference.

 My "Logical Guess" for Unnamed group is that you accidentally created group with a blank name.
1) Check current Proscan DB for blank group names.
2) Download the current scanner config into a new proscan database and check.
3) Check the groups within the scanner itself by system. - Assuming you programmed each trunked site as its own system all you need to do is find out which trunked system the "Unnamed group" is coming from and go into that system and check that the group names are all programmed properly.

Also you may want to check Close Call settings but this is a pure guess since I use the 396XT as a base scanner and don't know Close Call settings at all.

Hello All

after a week, of trying to convert my 396t sites to the 396xt i got it all done ,

what i did was used , Proscan software imported the systems i had saved in the old version of uasd off my 396t and uploaded the systems to the xt

i got it all done and i notice my 396xt, while scanning systems, about every few seconds says "Unnamed site"

it took me 2 years to get used to the system archetecture from banks and channels, im an over 20 year uniden customer one of my first scanners was a bc200xlt,

going from banks and channels to systems, groups, and the like was pretty hard ,but i managed,,

now i have to get used to

GPS feature enablin and disabling

temporary lock out

and NO paper manual

i looked over the manual on my laptop but its just not the same

LOL iguess thats what being 43 years old does for ya i guess

can any one tell me what Unnamed site means? I searched the PDf manual and no resiults for "unnamed site"

THank you group

the 396t group now saved my behind and fumbling fingers several times

hope i can find the guidance here to

Could you have duplicate Systems and one has the "Unnamed site" site in it?

systems , i make either by hand or with proscan,, if i make a site named whatever it will during the scanning process, show this site i name by hand then it shows unnamed site right after that ,, it scans ok no problem but just defaults to un named site

Topic: 2088 Message: 2156

In Trunk88 you need to set the port to data in the configuration file otherwise it looks for a soundcard input.

Also you need the control channel in a system. Once the radio finds the control channel, you can hold on it, and then Pro96Com or Trunk88 will work. It will not work from a direct entry or custom search. CC standard works just fine.

> gcr33 wrote:
> > I have not had any luck with pro96com or trunker88. I am using the BCD396XT with the serial port. I set the pro96 to com 1 115000 speed, I tried the cc standard and extend. I did not see any way to make changes in trunker88 for a setup. What am I missing?

I have not had any luck with UniTrunker, but others may if they use this method. Just holding on a control channel frequency in the direct "quick search" mode or in a user search does nothing at the output. Only if it is saved to a system and then put in the hold mode will the data go to the port.

Dear Hamradionut

There are a few people here that get the same garbled transmission as you do and there are some that really don't like the XT. One of the complaints that I have read about is the tuning ????difference between the 396T and the XT. The one main topic has been the inability to manualy fine tune the P25 signal. I do not know for sure, because I too am a first time owner of a digital scanner. So I can not compare the two scanners. Apparently the XT automatically tunes the systems and the T had the ability to manualy fine tune the signal. Again I am not sure if this is completely true or not. A lot of the T users don't like the XT because of that. It was talked about on this site a long time back. You may have problems fining it. Either way, good luck. It is a very good scanner.?

Subject: [BCD396XT] Not Impressed with the BCD396XT

Hi All,

Maybe it's just me, I have the new BCD396XT scanner, my first digitial, DMA etc...I also have the BC245XLT and the BC780XLT, and have enjoyed them both. I decided to get into the digitial world with the BCD396XT. I found this user group and a file on here for my area (Atlanta). I finaly figured out how to use FreeScan to load the file into the scanner, some of the frequencies were incorrect, so I looked on RadioReference web site and even some of there frequencies were incorrect so I copyied them from my trusty BC245XLT and set up the 369XT. So far I have had the scanner about a week, I live in north Newton County, which you can't monitor anymore because they went to SkyLink or something like that, I can barely hear Rockdale and I have to be IN Dekalb County before I can hear anything there. Also when i'm in Dekalb County listening to them the audio sounds garbled, and most of the time unledigable. The audio also Echos sometimes. I know Dekalb is on the digitial AP25 system, and Rockdale is not. Rockdale sound ok.

So am I doing something wrong or did I purchase the wrong scanner?? I have liked and used Uniden scanners for as long as I can remember, and they have always worked great. However this 396XT that I have is far from great, it's like the receiver is just not sensitive enough to hear the signals.

I am a Ham Operator, (since 1987) so I know a little about receiver sensitivity, and the likes.

Thanks in advance for any help.

Hamradionut

You might also check in on the Georgia forums at RadioReference. I seem to recall seeing that the Atlanta and Dekalb systems are pretty tough to receive unless you are right there. As with many newer systems, they tweak the signal coverage so that receive cutoff is pretty sharp with little extension beyond the intended area. Digital is much less forgiving than analog...with analog signals if the reception is poor you can still sometimes pull content from the noise. Not so with Digital...there it is either good or garbled.

In general, garbling is caused by one of about three conditions:

a) Too little signal; improve your location or antenna to solve this.

b) Too much signal (usually adjascent channel); many times turning on attenuation will help with this (by reducing the level of the interfering signal enough to remove the problem).

c) Multipath interference; can be helped by using a directional antenna aimed at a specific transmit tower or by relocating (sometimes by only inches).

For the Atlanta and Dekalb systems, setting up manually is pretty easy: For each one:
1) Create a P25 system.
2) Create a site.
3) In that site, use "Set Frequencies" to enter the three frequencies that comprise the control channel and alternates.

(If you want the systems to have nice names and other options, there is a bunch more you should do, but for a quick and simple system test, the above will suffice.)

When you scan them as programmed above, the systems will be scanned in ID Search mode, stopping on all system traffic (because you haven't programmed any channels). But, the above will work great for reception checks, and removing the chance for any other setting to be affected helps with troubleshooting (if there is an overall reception problem when programmed as above, then it is going to be either a), b) or c), above, barring any actual problem with the hardware).

Subject: [BCD396XT] Re: Not Impressed with the BCD396XT

Well I don't know what else to do. It's true i'm new to DMA, and I am a member of www.radioreference, but not a premier member, I'm not sure why that's important, to be a premier member. With my old scanners I could use ScanControl and the datagrabber feature and highlight, copy and load any thing I wanted into scancontrol and then load it into the scanner. For some reason I can't do the same with Freescan. I am also waiting for Scancontrol to update there software to support the 396XT.

So then in your opinion I have something set up wrong, if that's the case the file I used came from this users group, which I had to update some of the frequencies because they were wrong.

All things concidered above, i'm not sure what to do next, can you enlighten me?

Thanks,
Hamradionut

If you are a member of www.radioreference. com you can download anything you want into FreeScan software and load it right into the scanner. It's the most sensitive scanner to every hit the market. I live in SW Broward County all the way west in Miramar. I'm now listening to Palm Beach County TRS on a rubber duckie. This is not normal. Conditions are good. But things I could never hear I can hear with the xt scanners.

The direction that the radio is scanning.. Up or down from the chan.
List. You can change direction with a turn of the knob even while in
scan mode. This helps if you want to turn back to hear some follow up
traffic.. Like I do when I don't hit the hold button fast enough.

I'd be willing to bet that after he made the last change (naming the site AND the system) that he didn't delete the OLD system/site from the radio when downloading. That would leave the old UNNAMED site in the radio and add the new one.

Easiest way to fix is to either "cold" load the radio by deleting all sites, or manually go to the radio and delete the system, then download just that system again.

ALL trunked systems , i make either by hand or with proscan,, if i make a site named whatever it will during the scanning process, show this site i name by hand then it shows unnamed site right after that ,, it scans ok no problem but just defaults to un named site

I worry (as well as some others too) about over charging. Can't you just turn the scanner on and press the function key to get the battery voltage in the upper right screen? If so, why not check it now and then untill it gets to 4.2xx volts then you know it's fully charged. Or does it restart the charging process when you turn it on? Just a thought here.

What do you have you battery charge time set for? Why?

I currently have mine set at 5 hours. I worried about overcharging
them when I had it set higher. I didn't see anything in the manual
that told the mA of the charge, just the time that it received it.

As you suspected, it will reset the charge timer.

Best bet is to just charge externally.

Here in ILL on the new Starcom 700/800mgz Digital system i have welcomed the new "AUTO" digital decode rather than try to keep setting it on my own, seems its trying to decode the digital constantly as your mobile resulting in much better receive on this system than the 396t...Also on some single channel P25 digital ham and security freqys the AUTO decode holds longer...There are times when digital decode has trouble because of dropout of the CC's as ILL has about 182 towers and could use about 100 more but on my location the 396XT has been a big improvement.....On my GRE i have alot more trouble with "overload" from cell towers and analog trunk system CC's interfering with Starcom resulting in nothing but flickering of the shown talk group...My Opinion....

While external charging with a quality charger is clearly the best solution, I think that the concerns about overcharging are overblown. The scanner charges the 2300 mAh batteries to full charge in about 14-16 hours. That charge rate is sufficiently low that it shouldn't create any serious problems. After all, the scanner was designed to charge the batteries and, I suspect, most people use it to do so. You trusted Uniden enough to spend $500 on their scanner. Why would they create a charger that created serious problems?

That said, if your use pattern is such that you only use the scanner for an hour before you recharge it, you may want to set the charger for a time shorter than 14 hours to optimize the charger to your particular use pattern.

There are things worth worrying about in the world. I don't think the charging time is one of them.

YMMV.

Dick

I have to agree wholeheartedly here with Ron. That auto in this model is incedibly precise and handles STARCOM21 very well. Hands down. In some areas I have to completely remove the antenna on the GRE500 to achieve comparable listening. The difference between the T and XT is amazing....in a good way.

The biggest problem has nothing to do with how/where it is charged. It has to do with the cell shorting and self-discharging at a very high current (several amps). This is most likely to happen during charging. Fast or slow doesn't matter. I've seen this happen first-hand, and it's not pretty.

That said, Uniden is a slow (AKA trickle) charger and NiMH cells should not be charged slowly due to their chemistry and the formation of crystals which are broken down on a fast charge. It's also a fact that the cells are charged in series which is another no-no since you can't stop the charge when each cell reaches full charge as you should. This can result in overcharge of a cell which is very bad.

Third, it is a timed charge. Yet another no-no when it comes to charging any cells, as again overcharge is a distinct possibility - especially when the capacity of the cells lower as they age.

Will the Uniden charger work? Yes.

Is it the proper or best way to charge NiMHs? No.
Same goes with any device that charges NiMHs in series or slowly.

You cannot reliably determine whether NiMH batteries are fully charged by their "static" voltage reading (else it would be a trivial matter to automatically turn off charging when the batteries were full).

Hello, Thanks for the reply, Yes I think it has something with the automatic tuning in the P25 mode. I have noticed in P25 Monitor mode that the ERR gets up around 35-50 and the audio is trashed. Seems like the lower this ERR is like between 2-5 the audio is ok. Also there is out to the right of this on the screen the work AUTO and just to the left of that is a number, most of the time this number is 8 or higher. I have noticed in the FreeScan program there is a place where this can be changed or set called APCO Mode and Threshold, in the software the AUTO is default to AUTO, and the Threshold is default to "8" I wonder if this can be changed to improve on the digitial decoding of that system?? In the APCO Mode the options are AUTO, MAN, DFLT. and the Threshold is numbered from 0-63. So anyone can shed a little light on this, that would be great. Evidently the setting is changable, because in the FreeScan software the options are there.

> There are a few people here that get the same garbled transmission as you do and there are some that really don't like the XT. One of the complaints that I have read about is the tuning ????difference between the 396T and the XT. The one main topic has been the inability to manualy fine tune the P25 signal. I do not know for sure, because I too am a first time owner of a digital scanner. So I can not compare the two scanners. Apparently the XT automatically tunes the systems and the T had the ability to manualy fine tune the signal. Again I am not sure if this is completely true or not. A lot of the T users don't like the XT because of that. It was talked about on this site a long time back. You may have problems fining it. Either way, good luck. It is a very good scanner.?

Hi All,
Well the auto decode may be working for you guy's but here in the atlanta area, it's not too good. I just got the 396xt and the Dekalb county area is horrible as far as the 396xt decoding it. The audio is garbled, unreadable and sometime just not worth listen to. So I think the 396xt is a good scanner, but it needs some improvements in order to work on all the systems. I don't think any of them are the same, See my other topic "Not Happy with the BCD396XT" in this group and I welcome you comments. I am new to the BCD396XT but have been a Ham and scanner buff since 1987, so i'm not totaly in the dark. I am trying a few things to fix my situation, like manual decode of the P25 system (Dekalb) and see how that works. Some times the audio is good and sometimes it's not. Any of the Mot1 and Mot2 and conv systems the audio is great.

2176. PRO-106 vs. 396XT

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-06-25 03:41:07 UTC
From: sjetech
Topic: 2176 Message: 2176

Hi Guys,

I have to agree with some of the posts, The XT is struggling with APCO 25 systems in Albany, NY. On the converse of that, I originally bought the PRO - 106 and Man is that not a great radio for digital systems!!! Great audio and sensitivity ON DIGITAL. When I tried to listen to local Airband Comm it was deaf, VHF HI is really impaired so I promptly returned it. The XT on the other hand has amazing capability with the airband.

Is it possible that we can't have both? I'd hate to think we have to spend a grand to bring it all together...but maybe that is the reality. My hope is that future firmware will address the issue.

Here in the Boston metro area, I've been running a PSR-600 side by side with a 396XT since the first day the 396XT was available. Although not a "digital-rich" environment, I cannot tell any difference between the two. I should add that from some locations my 396XT receives and decodes the NHSP very well, which says a lot about its sensitivity.

Subject: [BCD396XT] PRO-106 vs. 396XT

Hi Guys,

I have to agree with some of the posts, The XT is struggling with APCO 25 systems in Albany, NY. On the converse of that, I originally bought the PRO - 106 and Man is that not a great radio for digital systems!!! Great audio and sensitivity ON DIGITAL. When I tried to listen to local Airband Comm it was deaf, VHF HI is really impaired so I promptly returned it. The XT on the other hand has amazing capability with the airband.

Is it possible that we can't have both? I'd hate to think we have to spend a grand to bring it all together...but maybe that is the reality. My hope is that future firmware will address the issue.

I am using the antenna that came with the unit, I also have tried using an antenna that came on my BC245XLT handheld, the 245XLT antenna seem to pick up a little better but it's not anything to shout about.

In FreeScan click on the right scroll button of your mouse.
Then click on new system.

Now add your findings to how many channels you can put in the BC396xt (25000) and how many you can put in the PSR-600. How about the many other features. I rest my case.

I am not a brand A is better than Brand B kind of guy. These were shared observations and please understand that anything I post in here is because I am looking for a solution not a problem. I am not a newbie by any stretch I have ejoyed this hobby since the debut of the BC 70XLT.

Here is what I should have said. I am an RR subscriber. I loaded the System for Colonie which is APCO 25 compliant and I am not receiving this system. I did the same with the PRO and at the time it worked great. Remember I did return the PRO. :-)

Who can help me out/What am I missing.

The only thing I changed on the unit was to upload the newest firmware.

Thanks
-SJE

What program did you use? FreeSCAN? Is it the current version 0.9B?

What system is it? Maybe the RR database entry link would help?

Having used the BC70XLT in the past tells me that you may need to relearn (or learn) about DMA and trunking settings on the 396XT.

I think you mean this system:
http://www.radioreference.com/apps/db/?sid=5758

No reason I can see that it wouldn't be receivable. What happens if you press HOLD while on the system. Do you see system info/tgid grant info?

I think this is a FreeScan bug. Select the System and change the type from "Mot Type II/P25" to "P25 Standard (Digital XT)". Download the system to you 396XT overwriting the original. You should now hear traffic.

Steve

Here in ILL being 35 miles SW of the city of Chicago using the RS800 duck i receive most all the Chicago 460mgz zones very well...In the old days my Regency Bearcats were very good on UHF, now its "UNIDEN" and there still very good on UHF....The 760XLT was very good also on UHF...Speaking of the GRE here on some posts, its a very good digital scanner but its just so overloaded in the mobile by cell towers and other interference you almost cannot use the RS800 duck as it seems to add to the problem...The 396XT stock antenna is not very useful in my area on anything, as mentioned get the RS800 duck, good on everything....I agree with the poster that mentioned both scanners are really very well made, i only "EVALUATE" each with its good and not so good points.....

The program is ARC XT PRO.

The link for Colonie is: http://www.radioreference.com/apps/db/?sid=5758
<http://www.radioreference.com/apps/db/?sid=5758>

as for this:

Having used the BC70XLT in the past tells me that you may need to
relearn (or learn) about DMA and trunking settings on the 396XT.
>
http://forums.radioreference.com/uniden-scanners/128991-uniden-scanners-\
new-user.html
<http://forums.radioreference.com/uniden-scanners/128991-uniden-scanners\
-new-user.html>

Dynamic Memory Allocation, Object oriented scanning, how TGIDs and
control channels function in a Trunked system as well as NAC are all
very clear to me. I appreciate the link though.

I did solve the problem. I reloaded firmware V1_07_00, deleted the
system and then uploaded the system again and it all cleared up. I also
enabled digital AGC and that made a great improvement in the volume.

I could not understand it for a while...as my PSR-600 was purring away
on this system

Thanks,

-SJE

Hi

Can someone tell,send any informations for me how export freq. from bct15 to bcd 396xt?
Ihave no idea?
I'm use bctool for bct-15 and now for 30days trial ProScan.
But proScan can't export frequency from bct15 to bcd396xt.
Can help me??Please....

Sorry for my English, I'm from Poland.

Robert

p.s the web site freescan.org is not avaible?
I try download freescan but web site is error

Please help me

If you have BOTH scanners, use FreeSCAN, read from the BCT-15, write to the BCD396XT. ProSCAN may also read the BCT-15 but I'm not sure of that. I did check the website and FreeSCAN says it will do both.

If you don't have both scanners, find software that will import the file format you have from the BCT-15 and be able to program the BCD396XT (FreeSCAN will read ARC files as well as UASD files).

If you need a pointer to the website - www.scannow.org

Good Luck.

Tom

ProScan should be able to read from the BCT15 and write to the 396XT
according to the website.

I believe that downloads from the FreeScan site are blocked to some
countries so this may account for the problem with the download.

I read the BC15 and write it back to the BC396xt with FreeScan.
In ProScan after you read it in make sure you change the scanner type.
If you don't there won't be a problem but it will give you an error. Ignore the error and hit program a second time and it will work.

2200. Odd "Feature" in BCD396XT

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-06-26 05:40:35 UTC
From: ka1tiv
Topic: 2200 Message: 2200

I have discovered an odd "feature" in my BCD396XT. If it is connected to a computer, and you are logging the scanner's hits, if you click the Mute (software button on the screen) or turn the Volume down to zero the scanner no longer logs hits to the program on the computer. I tried this with three different programs and they all behave the same. My BC346T behaves the same way. My BR330T and BCD396T do not behave this way. The bottom line is that if you have a BCD396XT or a BC346T, and you like to see what the scanner was doing while you were asleep, you are out of luck, unless I'm missing something.

Mark

I tried this with my 396XT with ProScan, FreeScan, and ARC XT. FreeScan and ARC XT behave as you described. ProScan logs the receptions to both the History grid and the Frequency / TG IDs Logging grid even if the volume is set to "0".

Of course, you can set the volume to 1 and plug in a set of headphones and sleep through the night unless you are a very light sleeper. :-) A dummy plug would shut off the speaker, but it could be that the lack of some load might be detrimental to the well being of the scanner so the headphones would seem the safer choice. I run my audio through the computer's sound system so I just mute the computer audio output from my keyboard and head to the bedroom.

This may sound corny but I'd like to see a fusion between the Uniden 396XT and the ICOM IC-R20. Trunk Tracker, Wide Band receiver with 25000 dynamic channels, built-in audio recording, etc., etc. with great sensitivity on all bands. Of course, I'd have to have the Canadian version of this scanner with no blocks on it!

I'd personally want the scanner to be a cross between the BCD396XT, The AOR 8200 MK3 and the ICOM R-9500 (ICOM's super receiver at $15000.00). Since there is no more analog cell service in the US why doesn't the FCC and Federal Gov't just cross that law off the books and let full specturm scanners be sold. The cell range blocked is probably worthless to monitor now.

Personally I'd bet the reason is that there is surveillance/bugging equipment in that frequency range. The Gov't agencies know it can't be monitored by a large majority of US scanner owners.

I know this is a little late, but I also live in the metro Atlanta area. Reception on these digital systems is not nearly as metro-wide as the older systems. I used to be able to pick up Gwinnett County like they were next-door (I live in Cobb County). But I cannot pick up their digital system, you just about have to be inside the county line.
Ditto for city of Atlanta.
Just FYI.

Ok, sorry folks i'm still learning this scanner and I have checked every where. Can someone tell me the easiest way to turn on and off systems???? In Other words if I am listening to one county and I want to turn that one off and another one on then how is that done.

So far I can only do it from the software. I mainly just listen to one county or system at a time because I have noticed with this scanner unless I am close by a system or county I can't hear them anyway.

Thanks,

HamRadioNut

Assign each county System a System Quick Key (SQK) and use that to enable/disable them. For example, assign county 1 a SQK of 1 and county 2 a SQK of 2, then when you want to listen to county 2 just press 2 then 1 (enabling SQK 2 and disabling SQK 1). To switch back, just hit 1 then 2. The only reason I enable systems first is to avoid the 'nothing to scan' message. You can do it either way.

Thanks joe for the reply, but when I try that it just disables the site within the county i'm listening to, and stays on the same county. I have 26 systems setup up and the first part is the trunk setup page. Then when you click the Plus the system opens up and I see the grp's for the system. So when I push the number 2 key, it just disables one of the groups within that system. What I want to know is how to select another system, and the grp's within it and turn the other one off or disable it.

Thanks again,
Hamradionut

Thanks RC for the reply. Yes I'm finding that out with most of the systems around here. As long as i'm somewhere within the county the reception is not bad barring the garbled audio sometimes when the scanner does not decode the audio correctly.

Any way thanks again,

Ham

Easiest way (using the keypad) is to assign a Quick Key to each of the System/Sites.

One option would be to assign all the sites in the system to the same SQK (so they'll all turn off when you press "2".

Yes I am. I have even replied to this thread (and I'd suggest that it is worth a re-read).

http://groups.yahoo.com/group/BCD396XT/message/2158

The first (and primary) requirement for good decode is good reception.

When you click the plus for a trunked system, you should have a list of the sites AND the groups for that system. This is true in FreeScan, ProScan and ARC-XT. Each trunked system has one or more sites. The system can also have one or more groups although it need not. You assign the SQKs for trunked systems to the sites. The sites in a particular system can have different SQKs or they can have the same SQK for all sites in the system. If there is more than one site for a particular system, you have to turn off all of the sites in order to turn off that system. You do that by either assigning the same SQK to all sites in the system and deactivating that SQK or by setting different SQKs to the sites in the system and deactivating all of the SQKs assigned to the sites in that system. If you leave any sites active, the system will continue to scan.

I think that you are confusing groups and sites.

It would be helpful if you would upload or attach a copy of your file. We should be able to resolve this easily if you would do that. If you want to email it direct to me, that would be fine as well.

Dick

The last part of your comments suggest that you're using the Group Quick Key (GQK) rather than the System Quick Key (SQK). If you've got multiple sites in your county trunk system, you can assign the same SQK to each site to disable them all at the same time.

Hi Dick,
The file I used is on this group in the files section, and in the freescan folder it's the metro atlanta.966 file. So if you look at the file there are a lot of systems there. A lot of them have a quick key that say's "by site" and then within there the groups have quick keys assigned. So you saying I should change the "by Site" to a quick key number.

Thanks for your help.

Yes Mr. Uniden,
I remember your reply and I did try all the things you mentioned and the situation is unchanged. I am also using a file from this message board that another member programmed or setup, so either this person did not know what they were doing when they created this file or the systems or the scanner has a problem, so which is it.

Like I said I admit i'm new to digitial scanning but i'm not new to scanning period. When I was using my old BC245XLT trunk tracker II I didn't have these problems. But now most of the system I like to listen to have gone digitial so I had to change also.

Yes that sounds correct. I am using freescan to edit, view, and upload the file to the scanner. I have noticed that there are conventional and [p25s] and also [mot2] and [LTR] etc systems mixed in this file. It also seems that all the conventional systems have a number in front of it in brackets like [01], [02] etc...so I am thinking these are the SQK you are talking about, then inside these are the GQK's. So by what you are saying I need to assign SQK's to the [p25s], [mot2], [LTR], etc instead of what's there. Then figure out how to turn them on and off. I only want to turn the systems on and off, not the groups inside the systems.

Yes, the numbers in front of the Conventional systems IS the SQK.

The SQKs for the sites are shown when you expand a trunked system.

Yes, you want to assign a SQK (and the same one) to each site so you
disable the entire System.

2223. Re: [BCD396XT] Re: Help

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-06-29 03:51:58 UTC
From: Richard A. Victor
Topic: 2209 Message: 2223

Ham,

I've looked over the file and it appears that each of the trunked sites does have a SQK assigned as do all of the conventional systems. The SQKs from 0 through 29 are assigned. There are a few groups without GQKs, but that shouldn't affect your ability to turn off the systems. Also there were some TG ID names without corresponding TG ID numbers in DeKalb Cty and some empty groups in Hartsfield and Gwinnett Counties. Again, I don't think that should affect your ability to turn systems on and off, but could lead to other possible problems.

I do note that you've got the programming set so that all of the SQKs start in the "On" position. That's fine if that's what you intended. FreeScan does allow you to set the way you want them to start in the Tools --> System Quick Key Manager.

In any event, I erased what was in my 396XT and uploaded your file unchanged. It started with all systems 0-29 enabled and I was able to turn off each of them and turn them all back on from the keypad with no problem. Not meaning to belabor the obvious, but turn to on or off the single digit SQKs you merely press the corresponding key on the keypad. To do so with two digit SQKs you must first press the "./NO" key and then the two digits, e.g., 23 would be "./NO", 2, 3.

BTW, the display S0:1234***8-0 would mean that you have systems 1, 2, 3, 4, 8, 0 turned on; systems 5, 6, 7 turned off; and system 9 unassigned. To see the display for systems 11, 12, 13, 14, 15, 16, 17, 18, 19, 10 you would press the "./NO" key and then the "1" key. That would display S1:1234567890 or whatever was appropriate for what was turned on, off and unassigned. Similarly, for 21-20, etc.

Using your datafile, the initial display would be S0:1234567890. To turn off DeKalb County, press "6". The display should then be S0:12345*7890. To then turn off Georgia TRS, press "./NO", "2", "2". The display should briefly show S2:1*34567890 and then return to the S0:12345*7890.

Let me know if this is of any help. If not, then I'm missing something and perhaps someone else can spot what it is.

From: hamradionut@bellsouth.net
Topic: 2209 Message: 2224

Thanks Dick, yes this explains a lot, the only other thing is figuring out or remembering what the SQK's are for each system. Guess I could make me a hard copy and refer to that. One other question, you mentioned the display S0:1234567890 and S1:1234567890 etc...how can I tell by looking at the file in freescan which systems are in S0: and which ones are in S1: and so on. The file you looked at here on the site is the one I used but I have modified it slightly because some of the frequencies were wrong for some systems. And I have used freescan to lockout the systems that I don't want to be enabled. So basicaly it's the same file though.

Thanks again for the help

Hamradionut, Lets assume you have 5 trunked towns in County A and 5 in County B. Did you setup each trunked radio town as a seperate system. A1, A2.. A5 B1, B2..B5? If so what you want to do is Put all County A trunked Towns to one softkey and all County B trunked towns to another.

My Scanner is setup as follows. Group names ie Cities on the trunked systems are the group names. I'll just show group names for Hometown.

Emergency Conventional Frequencies Always monitored Assigned SQK 1
  National Mutual Aid System 866.0125, 866.5125, 867.0125, 867.5125, 868.0125
  State Mutual Aid channels (Misc Other Freqs I don't know off top of head)
  Commercial Air Emergency 121.500
  Mil Air Emergency 243.000
  Search and Rescue 123.100
  Marine Distress 156.800

Systems in Broward County (county where I live) All Assigned SQK 2
    Broward Conventional Channels of Interest
    Coral Springs
    Ft Lauderdale
    Hollywood
    Planation
    Deerfield Beach
    BSO (County Sheriff/Fire)

Systems in Palm Beach County All Assigned SQK 3
   Palm Beach convention freq of Interest
   Boca Raton
   Boynton Beach
   Delray Beach
   PBSO (County Sheriff/Fire)

Systems in Miami Dade County All assigned SQK 4
   Miami
   Metro Dade
   Miami Beach
   Hialeah

FOR YOUR SYSTEM: No Knowledge of Atlanta

Emergency Systems always monitored Assigned SQK 1

Systems for County Name 1 (county where you live) Assign each system SQK 2
   Conventional 1
   Atlanta North
   Atlanta South
   County Sheriff/Fire

Town 1
Town 2

Systems for County Name 2 Assign each system SQK 3
Conventional 2
Conv Mut Aid
A
B
C
D

Yes that sounds correct. I am using freescan to edit, view, and upload the file to the scanner. I have noticed that there are conventional and [p25s] and also [mot2] and [LTR] etc systems mixed in this file. It also seems that all the conventional systems have a number in front of it in brackets like [01], [02] etc...so I am thinking these are the SQK you are talking about, then inside these are the GQK's. So by what you are saying I need to assign SQK's to the [p25s], [mot2], [LTR], etc instead of what's there. Then figure out how to turn them on and off. I only want to turn the systems on and off, not the groups inside the systems.

From: tomvanderpool
Topic: 2209 Message: 2226

In FreeSCAN, you can use Tools/System Quick Key Manager to see which quick keys are in use. The ones used are in bold and if you hover over a bold one, it will show (in a box to the right) what that key contains/controls.

I believe that in a newer version, Assaf is working on a print routine to do a "cheat sheet" of quick keys.

Hope that helps.

Tom

Thanks Dick, yes this explains a lot, the only other thing is figuring out or remembering what the SQK's are for each system. Guess I could make me a hard copy and refer to that. One other question, you mentioned the display S0:1234567890 and S1:1234567890 etc...how can I tell by looking at the file in freescan which systems are in S0: and which ones are in S1: and so on. The file you looked at here on the site is the one I used but I have modified it slightly because some of the frequencies were wrong for some systems. And I have used freescan to lockout the systems that I don't want to be enabled. So basicaly it's the same file though.

Thanks again for the help

Subject: Re: [BCD396XT] Re: Help

Hamradionut, Lets assume you have 5 trunked towns in County A and 5 in County B.
Did you setup each trunked radio town as a seperate system. A1, A2.. A5 B1, B2..B5? If so what you want to do is Put all County A trunked Towns to one softkey and all County B trunked towns to another.

My Scanner is setup as follows. Group names ie Cities on the trunked systems are the group names. I'll just show group names for Hometown.

Emergency Conventional Frequencies Always monitored Assigned SQK 1
National Mutual Aid System 866.0125, 866.5125, 867.0125, 867.5125, 868.0125
State Mutual Aid channels (Misc Other Freqs I don't know off top of head)
Commercial Air Emergency 121.500
Mil Air Emergency 243.000
Search and Rescue 123.100
Marine Distress 156.800

Systems in Broward County (county where I live) All Assigned SQK 2
Broward Conventional Channels of Interest
Coral Springs
Ft Lauderdale
Hollywood
Planation
Deerfield Beach
BSO (County Sheriff/Fire)

Systems in Palm Beach County All Assigned SQK 3
Palm Beach convention freq of Interest
Boca Raton
Boynton Beach

Delray Beach
PBSO (County Sheriff/Fire)

Systems in Miami Dade County All assigned SQK 4
Miami
Metro Dade
Miami Beach
Hialeah

FOR YOUR SYSTEM: No Knowledge of Atlanta

Emergency Systems always monitored Assigned SQK 1

Systems for County Name 1 (county where you live) Assign each system
SQK 2
Conventional 1
Atlanta North
Atlanta South
County Sheriff/Fire
Town 1
Town 2

Systems for County Name 2 Assign each system SQK 3
Conventional 2
Conv Mut Aid
A
B
C
D

In FreeScan you can print a summary of the systems and groups showing the quick keys. Go to File --> Print and select the "Print An Overall Summary Only Option".

In FreeScan, to tell which systems are assigned to a particular SQK, you go to Tools --> System Quick Key Manager. When you move your mouse over a particular number, the systems assigned to that SQK are shown in the box on the right hand side of the dialog.

The SQKs for conventional systems are shown in the system list on the left side of the main screen in FreeScan. For trunking systems you have to open the tree so that you can see the sites and you will see the SQKs for each site.

Download the zip file which usually goes to the \users\your login id\download directory. Goto this directory Right click on the ..ZIP file and click on extract all. The resulting EXE file will be in a subdirectory \users\your login id\download\arcxt_setup The filename will be arcxt_V1_build1.exe (assuming you downloaded the latest release.

Run the EXE file and ARCXT will be setup on your PC.

Yes, but not in that order though, correct? It's more like,

1-9 & 0
11-19 & 10
21-29 & 20

Is that more accurate?
?

Thanks Dick, yes this explains a lot, the only other thing is figuring out or
remembering what the SQK's are for each system. Guess I could make me a hard
copy and refer to that. One other question, you mentioned the display
S0:1234567890 and S1:1234567890 etc...how can I tell by looking at the file in
freescan which systems are in S0: and which ones are in S1: and so on. The file
you looked at here on the site is the one I used but I have modified it slightly
because some of the frequencies were wrong for some systems. And I have used
freescan to lockout the systems that I don't want to be enabled. So basicaly
it's the same file though.

Thanks again for the help

Topic: 2233 Message: 2233

Hello is it possible soon compatibility BcTool for BCD396XT?
I'm asking about becouse Bctool is very good software.I have BCT15 and BCD396XT now and waiting for one preety program like bctool for both(BCT15 is working) 396XT not working on bctool:(

It's be new ver.of bctool for XT???
Do You have any informations?

Thanks

Robert

Subject: Re: [BCD396XT] ARC-XT Pro Software

Download the zip file which usually goes to the \users\your login id\download directory. Goto this directory Right click on the ..ZIP file and click on extract all. The resulting EXE file will be in a subdirectory \users\your login id\download\arcxt_setup The filename will be arcxt_V1_build1.exe (assuming you downloaded the latest release.

Run the EXE file and ARCXT will be setup on your PC.

I thought respond to this thread, although its a bit old.

I've been a power-user of scanners for decades, and have been using the 396/996T models since they came out. In metro Atlanta, we've had quite a bit of digital migration so we jumped on the chance in our newsroom to snatch up the 396XT when it came out. I am, as always, the programmer and beta-tester.

I've been using the 396XT for several weeks, and unfortunately after that time have been a tad disappointed. I primarily monitor the Cobb County P25 TRS, the oldest digital system in the metro. In the past three weeks I can not remember losing so many addresses or call details due to garbled transmissions than in the past year of the "T" model.

I had a chance to monitor Atlanta during the garage collapse this week and its performance was about the same. I also have used it to scan DeKalb County's new P25 system.

Tweaking is a bit limited on the XT, but I've checked the obvious problems (Squelch is low; ATT, AGC, and LP Filter are OFF). The one thing I have not played with is the P25 Waiting Time (I'm not convinced it would change things).

There are a lot of things to like about the 396XT; it seems to program much faster, has more memory, and some neat features.

But given the first few weeks of use, I think I will tell our folks to put off buying the boxful of 996XTs and instead purchase just one for another round of testing (our desk desperately needs some digital scanner help).

Any other suggestions anyone has for improving P25 decode performance would be welcome!

Thanks all, Ross Cavitt WSB-TV

--- In BCD396XT@yahoogroups.com, Uniden UPMan <uniden.upman@...> wrote:
>
> You might also check in on the Georgia forums at RadioReference. I seem to recall seeing that the Atlanta and Dekalb systems are pretty tough to receive unless you are right there. As with many newer systems, they tweak the signal coverage so that receive cutoff is pretty sharp with little extension beyond the intended area. Digital >>> snip <<<

bcTool is undergoing a major rewrite (like virtually from scratch). XT
support will likely be in the new version when it's released, but that
may be a while.

2237. RE: [BCD396XT] Freescan Software

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-07-01 16:09:20 UTC
From: Derek Helling
Topic: 2237 Message: 2237

I trying to use my new Netbook computer as a portable accessory for my XT using Freescan 0.9B.

When I first tried to run Freescan I received an error message that said I needed the Microsoft.NET framework.

In the process of obtaining NET Framework I have acquired version 1.1 (plus two hotfixes), version 2 SP1, version 3 SP1 and version 3.5. This uses a lot of resources in a small netbook.

Freescan now works fine but I don't know which version of NET framework it is using. I suppose I could use trial and error to determine which version(s) of NET Framework to delete but I wonder if anyone has any advise on the subject.

Thanks.................Derek

It needs 2.0 to run. You can uninstall 3.5 and 3.0 if you don't want them.

From: Charlie Collins
Topic: 2242 Message: 2242

I just got the 396 last week and I love it. Right now I listen to the regular 800 mhz Trunked systems around Wichita, KS. For digital I am listening to KHP Troop F, G (KS Turnpike Authority) and the KBI. I know there is no software (that I know of) for a Mac, but I was wondering if any Mac users have gotten any to work with Parallels for Mac or VM Fusion. I've got Parallels but haven't tried it out yet (mainly because I don't have a copy of Windows).

I've using 396 Software (FreeScan and Butel ARCXT) on my Macbook Pro. I've have a Windows XP Virtual Machine running with VM Fusion (I'm using the Bootcamp Partition). It was worked well.

I had some problems with the drivers for my USB-1 (or my USB to serial converter). But I was able to get them to work by installing the latest drivers (not from Uniden but from Prolific). They would work but be prone to errors prior to using the lasted drivers.

I have had no issues using Parallels, Fusion or BootCamp and any of the ARC products, including ARC-XT. Works great!

I found however that it is best to plug in the USB cable or RS232 adapter when in Windows rather than in the Mac environment to allow Windows to properly detect and install. Also, install the drivers BEFORE plugging in the device if possible.

I have not tried running these in any type of Linux with Windows emulators however. I have heard that some people have had success.

From: j0hnburt0n
Topic: 2245 Message: 2245

Wow!!! Is that weather alert tone annoying or what?!? Here in the midwest, I would like to set the scanner on wx alert mode when a storm front is due to move through overnight. I could never get away with this unless I placed the scanner into a hermetically sealed, lead-lined mayonaise jar and then covered it with pillows! The alert tone is a heart attack waiting to happen. I sure wish there were optional settings for the wx alert much like the other alert tones. I've reverted to my gmrs radio for wx alerting because it has tone options and volumn settings. Unfortunate after paying $500 for the scanner!

Everyone goes through this. You turn on the wx alert, figure just in case, and it goes off and nearly kills you. It is just kind of an initiation, a way to teach you never to turn it on ever again. I almost had a heart attack the first time I heard it as well.

I have an Intel Macbook running Windows XP in VMWare Fusion with an ATEN serial to USB adapter ? it works great. I have had absolutely no problems programming ANY of my scanners (780XLT, 246T, 396T, and 396XT) using a combination of Andy's 780XLT, UASD, FreeScan and ARC software. I have also done numerous firmware updates without issue using this setup.

Are you trying to listen to systems that are far away? Newer systems are lower powered and are designed to work within 3 miles of their jurisdiction. It's not the old days with 1000 watt transmitters. It is possible that the file you are using has a problem. I use freescan. It's free and works fine. I don't need bandscope and other such stuff, I just want to program my radio which is currently 14% full.

My 396xt seems to be far more sensitive than my Pro96.

May I also again encourage others to post their files in the files section.

Is it any worse than a tone you might hear using some of the stand-alone weather radio receivers for some reason?

Everyone goes through this. You turn on the wx alert, figure just in case, and it goes off and nearly kills you. It is just kind of an initiation, a way to teach you never to turn it on ever again. I almost had a heart attack the first time I heard it as well.

Well, I think the tone is intentional. I would not want one that I could easily sleep through!

Wow!!! Is that weather alert tone annoying or what?!? Here in the midwest, I would like to set the scanner on wx alert mode when a storm front is due to move through overnight. I could never get away with this unless I placed the scanner into a hermetically sealed, lead-lined mayonaise jar and then covered it with pillows! The alert tone is a heart attack waiting to happen. I sure wish there were optional settings for the wx alert much like the other alert tones. I've reverted to my gmrs radio for wx alerting because it has tone options and volumn settings. Unfortunate after paying $500 for the scanner!

The '3-mile' limit only applies to the NPSPAC systems (866-869 MHz, or 851-854 MHz if rebanded). Other systems are not under this requirement and usually (but of course not always) will cover farther.

As for your 396 being more sensitive, I bet your 96 is being overloaded.

Joe M.

gcr33 wrote:
> Are you trying to listen to systems that are far away? Newer systems are lower powered and are designed to work within 3 miles of their jurisdiction. It's not the old days with 1000 watt transmitters. It is possible that the file you are using has a problem. I use freescan. It's free and works fine. I don't need bandscope and other such stuff, I just want to program my radio which is currently 14% full.

It's not. At least it's no worse than any of the other units I've purchased in the last 10 years. Yes, some older ones were adjustable, and that's likely what led to industry interdiction when they were not suitable for the purpose for which they are intended. There are more than enough lawyers out there who would jump at the chance to exploit this failure.

As for why, Paul Opitz posted the reason why it is so 'loud'. It has to meet the ANSI/CEA spec that specifies that the alert tone *must* be "an SPL of a minimum of 77 dB at one meter." Yes, that IS loud. As Paul also said, it's in the same class as smoke detectors. Both are loud for a reason.

So, for ANYONE who thinks the Uniden scanners are too loud for the weather alerts, *** petition ANSI/CEA to LOWER the specification ***.

Stop blaming Uniden for not wanting to violate this spec and be subject to a lawsuit. Yes, industry standards are enforceable in court even though they are not laws or regulations. When you violate such standards, you are guilty of negligence - perhaps gross negligence in light of the fact there are lives at stake combined with a willful ignorance of industry standards IF they made a decision to not comply.

As for the alert being annoying, please read what you wrote! You're complaining because an ALERT TONE is too 'annoying'. That's it's entire purpose - to get your attention. It wouldn't be much of an alert if it were easily ignored or missed. If it were, I'm sure there would be a thread complaining about it not being loud enough.

But again, there will be NO MORE Uniden bashing for obeying this industry specification. Again, if you think the Uniden scanners are too loud for the weather alerts, *** petition ANSI/CEA to LOWER the specification ***. Oh, and good luck with that, as you will have to prove it's in everyone's best interests.

What is the correct setting when the type is unknown?
Frequency xxx.xxxx is unknown type to me. I want the scanner
to decode whatever it is, pl, dpl, or nac. What setting do
I use?

Thanks,
George

It's my understanding that you would set the Audio Type to "All", but that you couldn't determine pl, dpl, or nac in that mode. Once you know whether it's analog or digital, you set the Audio Type accordingly and can then search for pl, dpl if it's analog or nac if it's digital. I'm not aware of any way to do what you want in one step.

See page 63 of the Complete Reference.

It can't do that.

When you don't know what the signal is, set the audio type to ALL.

Then you can either set it to CTCSS/CDCSS SEARCH to decode CTCSS/CDCSS
tones/codes, OR set it to NAC SEARCH to display a NAC for a P25 signal.

Ooops. Let me retype that...

It can't do that.

When you don't know what the signal is, set the audio type to ALL.

If you know it's analog, then you can set it to ANALOG ONLY and set it
to CTCSS/CDCSS SEARCH to decode CTCSS/CDCSS tones/codes, OR if you know
it's digital you can set it to DIGITAL ONLY and set NAC SEARCH to
display a NAC for a P25 signal.

If the forecast is for severe storms overnight, I would put the 396xt in an adjacent room or a nearby bathroom.close the door partially too and then if the tone is activated, it won't be loud enough to give you a coronary but it should be loud enough to wake you.

I used to have an old analog base scanner in the kitchen downstairs for this purpose and it was plenty loud to wake me at night at that distance even when we were upstairs sleeping when the NWS activated the tone. I had to get rid of that scanner though as it didn't have FIPS or SAME capabilities and without those capabilities, it was a most annoying and frustrating event on many a stormy night.

Yes. FreeScan is free and works very well. ARC-XT is not free and
Version 1 Build 1 still has a number of features that aren't working such as

-Print Current Grid heading refers to bank # and bankname
-Print Current System doesn't
-Print All Systems doesn't
-No ability to choose printer
-Find doesn't work
-Replace doesn't work
-Setup Groups doesn't correctly list groups in selected system
-Multi Site Editor includes conventional systems in drop down list
-Custom Search has a column for Data Skip which doesn't exist
-When a tone is detected it often results in two lines in the History
Log, one for the tone and one for the transmission itself.

I'd suggest that you try the free trial before shelling out any money.

Dick

The original question doesn't make any sense. Since the two software products are from two separate independent sources it is extremely unlikely they would be the same.
Maybe the author of the original question should ask a more sensible question and then he may get some sensible answers.

If you don't understand Uniden's DMA memory I think FreeSCAN is better for those new to it. I had no idea what I was doing when I programmed my 396XT with other software but once I used FreeSCAN I Unidens scheme. ARC XT is good software if you are familiar with the Scanner and also have used other ARC products the spreadsheet layout is very nice and informative. ARC XT is just at Release 1 so it does have bugs which another person already listed.

I don't know why there tends to be a "put down" on ARC (and there's no need for a discussion about it again!) but yes, there are differences between FreeScan and ARC-XT. The biggest, of course, is that one is free and the other is not. I would suggest, as others have, that you download ARC-XT and try it for the trial period.
FreeScan is a great program. ARC-XT is also. ARC-XT still has some things to work - it's going to cover all of the XT scanners from Uniden. (Not making excuses, just stating fact.) I find it to be working extremely well for what I need and I need a lot. I don't need it to print out anything, I do need for it to be fast and, in virtual mode, to be able to show the frequencies properly that it's picking up - which it's doing very well.
I've used ARC for years. I use FreeScan as well. Both are good programs. One has to use both and see which one fits their needs
best. Proscan is another excellent program - it also is not free but is well worth the purchase if one likes the program and can use some of the features which comes with it that you'd have to pay a lot more for elsewhere.
Best advice is to take advantage of the trial periods available with ARC and Proscan. See which one YOU like the best. No software program is going to suit everyone's needs and style! Don't judge any of them too quickly - give each of them at least a good, solid week...these programs are working with a sophisticated scanner which has a LOT of features. Each of them handle the scanner very well BUT each does it in a different way. We all find features about these programs we're more comfortable using...thus the reason for taking your time with the trial periods. Don't rush - again, find the one you like best - and you will, I'm quite sure!

Shelley

P.S. If you don't already have a subscription with Radio Reference, I highly recommend you get one. It's worth every penny and more.

I'll repeat the advice.

There are currently 3 software programs that support the BCD396XT.

FreeScan (free)
ProScan (fee)
ARC-XT (fee)

I suggest you download all 3 and try them. There is a full functional trial available for ProScan and ARC-XT. And FreeScan is free.

2273. Re: BCD396XT MENU

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-07-05 18:35:45 UTC
From: JAN FINE
Topic: 2273 Message: 2273

I had a problem with the BC396Dxt menu. I was wondering if anyone else has had this problem. I wanted to change a quick key of one of the systems. When I went into the MENU it said Program System like it normally does. When I selected that it went to the next menu where you see all your systems. No matter which direction I turned the knob on the top of the scanner it would only flip between the first 2 systems. I took the batteries out for about 1 minute and sometimes the same thing would happen and sometimes it would go to add a new system at the bottom. The next turn of the knob would go back to the first 2 systems. You could see the others but you could not go to them. I backed out of the menu and went back in. This time when I could get to Program new system I did. Same thing. None of this affected the scanning of the radio. Or any other operation. I took the batteries out and left them out for 10-15 minutes. Put them back in and everything was back to normal.

Anyone else experience this or know what could have happened?

From: flhays
Topic: 2275 Message: 2275

Basic question- How do I assign system #'s and group #'s as a sub groups? Similar to a flow chart Example :

System #1
city #1
county #2
other #3
System #2
a-diff.city#1
a-diff.county#2
a-diff.other#3
System #3
a-diff.state#1
a-diff.county#2

(etc)

As of now all I can get them to look like is a bunch of subgroups.

You set the System Quick Key (SQK) in the EDIT SYS OPTION then SET QUICK KEY menus under the PROGRAM SYSTEM menu item. The Group Quick Key (GQK) is set under the EDIT OPTIONS menu under the SET QUICK KEY menu item (which is below the PROGRAM SYSTEM item after you select the System you want to edit, then select EDIT GROUP and select the Group.

If you're talking about the Startup Key or Number Tag items, those are under the EDIT SYS OPTION menu right under the QUICK KEY selection.

Hi All,

Off topic...a little. :-)

In need of a "wideband" mast mounted pre amp and antenna for the 396xt.

What is the group using? Would like best possible frequency range for both.

I welcome your comments

Thank you for your interest.

Greg

2280. speaker now intermittant ATTN UPMan and others . . .

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-07-06 18:01:53 UTC
From: Scott
Topic: 2280 Message: 2280

I got one of the first BCD396XT's, just a few days after they were released.

A few days ago the speaker on my scanner started flaking out. It sounded quite garbled. Now it's intermittant. Sometimes it works, other times, it's complely silent. If I have it hooked up to external speakers, it works 100%, and the audio is fine.

Thinking I may have to send it in for warranty repair -- I've also heard it's not too tough to do yourself. But I'm guessing that if I did that, it would void my warranty. Am I correct?

Is there anything I could have done to cause this? I mean the speaker is matched to the audio circuit, right? I couldn't have damaged it by listening at high volumes, could I??

How would I go about sending it in?

Thanks,
Scott

I will chime in here - I received my new 396XT with only a few hours before having to leave it with a friend and travel for a few weeks. I downloaded FREESCAN, paid for a $15 RadioReference Premium Acct and the scanner was working beautifully in less than 1 hour.

I read no documentation, and programmed nothing directly on the scanner. I was truly impressed with the ease of start up with only a small, free program and $15 bucks.

I will learn much more about the scanner when I return and I want to thank everyone for being so helpful on this group. I see something useful to know almost everyday when I skim through the daily digest of postings.

I am very happy with my old Uniden's and now I am very, very happy with my new Uniden scanner and FREESCAN.

Subject: [BCD396XT] Re: Re software

I will chime in here - I received my new 396XT with only a few hours before having to leave it with a friend and travel for a few weeks. I downloaded FREESCAN, paid for a $15 RadioReference Premium Acct and the scanner was working beautifully in less than 1 hour.

I read no documentation, and programmed nothing directly on the scanner. I was truly impressed with the ease of start up with only a small, free program and $15 bucks.

I will learn much more about the scanner when I return and I want to thank everyone for being so helpful on this group. I see something useful to know almost everyday when I skim through the daily digest of postings.

I am very happy with my old Uniden's and now I am very, very happy with my new Uniden scanner and FREESCAN.

>
>
> I had a problem with the BC396Dxt menu. I was wondering if anyone else has had this problem. I wanted to change a quick key of one of the systems. When I went into the MENU it said Program System like it normally does. When I selected that it went to the next menu where you see all your systems. No matter which direction I turned the knob on the top of the scanner it would only flip between the first 2 systems. I took the batteries out for about 1 minute and sometimes the same thing would happen and sometimes it would go to add a new system at the bottom. The next turn of the knob would go back to the first 2 systems. You could see the others but you could not go to them. I backed out of the menu and went back in. This time when I could get to Program new system I did. Same thing. None of this affected the scanning of the radio. Or any other operation. I took the batteries out and left them out for 10-15 minutes. Put them back in and everything was back to normal.

Hi All,

Q: Someway I was able to "Turn ON" the Green Light when a new TG is active on a system. How do I control this? On / Off ?

Thanks for any information.

Greg

It's in the CHANNEL OPTIONS under SET ALERT then SET ALERT LIGHT.

A shortcut to the channel options is to hold on a channel then hit the
ENTER button.

I can not download systems by the freescan???
The port is com4 scanner is allready connect to freescan (possible remote control) but if i try download all the time download from scanner frequency like 145.000 etc. but frequency is on radio 145.375.
It's like gap after 145.... is only 0 (zero) in all system start first frequency like 145.0000mhz,151.000mhz (past dot is all time 0 -Zero)???
Same problem in BCT15 can sombody help me what is it?

p.s
also can not dowload freescan from web site(error 404) i'm from poland and the server is closed for me.:(
Allready use freescan .9b is it new ver??

Robert

Hi Robert. The problem with the frequencies getting cut off happens when your locale settings are set to operate outside US/Canada. You have to go to Control Panel/Regional and Language settings and change the setting so a decimal point is represented by a period rather then a comma.

Poland is blocked because of problems with SPAM. However if you privatley email me your IP address I will unblock a window so you can still access the site. .9B is the newest version but I plan to get .9C out shortly.

Assaf

Volume / Squelch / Scroll Knob
In most modes, simply rotating this knob takes you to the next setting, system, or channel or resumes scanning. To use the VOLUME control, tap the control one time, then rotate the knob. To use the SQUELCH control, FUNCTION+tap the control one time, then rotate the knob.

2295. Two Tone Scan Resume

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-07-09 19:38:32 UTC
From: elrailfan
Topic: 2295 Message: 2295

I have programmed the 396XT with Freescan (works great) - but when scanning and locked onto a channel receiving two tone alert tones, the scanner will resume scanning before the rf signal drops.

I have a delay set on the resume time, have pl properly input, and have the p25 delay time set for 0.

It seems that I have missed a setting on the two tone alert function, however I do not seem to find any reference to this re-scan condition in the manuals.

Any help would be greatly appreciated.

Thanks in advance

2297. Uers Impressions!

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-07-09 16:41:27 UTC
From: kb1gcb
Topic: 2297 Message: 2297

Hello everyone from a new member,

I hope my questions have not been asked before--did search this forum first! Sorry if my search criteria was incorrect--don't want to ask prior questions.

Would like to add a portable scanner to my radio equipment. Although new to scanners/scanning, I am a ham operator using mostly cw. I do enjoy listening with my icom 91ad (digital) ht and icom 910 base unit. Enjoy listening when hiking and camping. Also, use my icom ht with a diamond roof antenna (x500n)--does well, even on digital. Not sure how this scanner would handle it?

Enjoy new technology and learning new equipment--very comfortable with computers/software. My ham radios are ten tec and icom--all have been very good!

Questions:
Does the 396xt work as advertised and are you happy with your choice?
Does uniden support their products? (Ten tec has excellent support!)

Thank you in advance for your info/comments/impressions on this new scanner and helping me with my buying decision.

John KB1GCB (little Rhode Island)

You would assign a different SQK to each system (or site(s) within the system) and use them like "bank keys" to turn them on/off individually.

See http://info.uniden.com/twiki/bin/view/UnidenMan4/UsingQuickKeysStartupKeysAndSearchKeys for more.

Is it one trunking system of four trunking systems. If four systems, assign each system its own SQK (System Quick Key).
If it's one system, with several groups, use GQKs to turn the different groups on or off.

Two comments: If scan is resuming early, check the Data Skip function or the delay setting for being a negative value.

As for the FTO feature, that will not work when scanning. FTO only works when in dedicated FTO mode.

I think it's one of the best choices in portable scanners on the market. The only competition in the same class is the GRE PSR-500 (and it's clone - the Radio Shack PRO-106). Each has features the other doesn't, and while I like some of the features the 500 has, I like the small size of the XT (never thought I would be saying that phrase since the early 80s), as well as the memory management and greater channel capacity. The FTO (Fire Tone Out) function is handy, too, for when you want to keep touch with what is going on without the routine chatter.

As for support, Uniden is great at fixing bugs, and you have a direct contact with Uniden on the lists. If you find anything that doesn't work as advertised, they make sure it is corrected so it does work.

There are some systems that have problems with P25 decoding, but from what I've seen those are usually system problems and both scanner choices have problems with one system or another. Which one works best for your area is something you would have to ask your local users. If you have a local scanner group, by all means ask them their opinion, too. I'm not aware of any group in RI, but that doesn't mean there isn't one.

Yes Paul, change the advertising!

Include that (uniden.upman@ yahoo.com) comes with the radio.

A flier could be included with each Uniden Scanner
- Mentioning these Yahoo Groups
- Mentioning Upman
- Mentioning "My Uniden"

Include these on the product bullet-ed feature list

I wonder how many people purchase these radios and have no idea of
the above mentioned support structure that is in place to help them get
up and running and then get the most out of the Uniden product.

For me and others this is the Uniden added value and ROI that differentiates
Uniden from the competition.

Thanks.......and Keep Safe!

There is a setting somewhere in the menu that actually sets a negative number to the delay. (I hope I am saying that right) I am not sure how it works but maybe it's putting the radio back in the scan mode before the transmission is done. Don't have my pdf printout handy or I would look it up. Does this sound familiar?

Subject: [BCD396XT] Two Tone Scan Resume

I have programmed the 396XT with Freescan (works great) - but when scanning and locked onto a channel receiving two tone alert tones, the scanner will resume scanning before the rf signal drops.

I have a delay set on the resume time, have pl properly input, and have the p25 delay time set for 0.

It seems that I have missed a setting on the two tone alert function, however I do not seem to find any reference to this re-scan condition in the manuals.

Any help would be greatly appreciated.

Thanks in advance

There is. It's in the System options called SET DELAY TIME. Most people use positive values. Negative values will cause the scanner to sit on any channel in that System for X seconds and move on regardless of channel activity.

You get to the negative values by scrolling counterclockwise 'past' 0.

I will also add that since this is a channel feature (programmed at the System level), it wouldn't have any effect on the FTO feature since you cannot scan and use FTO at the same time. Just wanted to add that for anyone searching the archives and seeing the negative delay mentioned in a "two-tone scan" thread.

> > I had a problem with the BC396Dxt menu. I was wondering if anyone else has had this problem. I wanted to change a quick key of one of the systems. When I went into the MENU it said Program System like it normally does. When I selected that it went to the next menu where you see all your systems. No matter which direction I turned the knob on the top of the scanner it would only flip between the first 2 systems. I took the batteries out for about 1 minute and sometimes the same thing would happen and sometimes it would go to add a new system at the bottom. The next turn of the knob would go back to the first 2 systems. You could see the others but you could not go to them. I backed out of the menu and went back in. This time when I could get to Program new system I did. Same thing. None of this affected the scanning of the radio. Or any other operation. I took the batteries out and left them out for 10-15 minutes. Put them back in and everything was back to normal.

2318. BCD396XT drops out on digital system

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-07-11 04:31:36 UTC
From: ahenney
Topic: 2318 Message: 2318

My two-week-old BCD396XT is dropping out on strong digital signals and I'm missing parts of some (but not all) digital transmissions.

At one point the scanner stopped decoding the P25 digital entirely and I was hearing the pure Astro noise. I had to power down, take out the battery and turn it back on.

Is there a setting I need to change or does this radio need to go back for service?

Thanks,
Alan

See if any of the following are enabled:

Close Call (make sure it's on DND mode if it's enabled), Channel
Priority, or Weather Priority.

No not really, when I listen to Dekalb, i'm in Dekalb and it's still garbled some of the times, as with the other metro systems. I listen to them when i'm in there county. I don't really care what's going on it Dekalb if I'm in Rockdale or Fulton.

AnyWay thanks to all for the replies and information. It has helped me understand the scanner a little better.

So that being said I guess the scanner is what it is, and until either the systems improve on there signals, or something else changes then it's just that, it is what it is.....

I was listending to the scanner yesterday and every transmission would drop
after about 5 seconds -- I turned Weather Priority off and everything was fine.

Is there a way to configure a CUSTOM SEARCH for digital reception only that will also display NAC codes?

From what I can tell you can only enable a CTSS/DCS tone search which then disables any digital reception.

From: Michael Bennett
Topic: 2323 Message: 2323

How do you manually delete a CUSTOM SEARCH from memory?

[Non-text portions of this message have been removed]

You can't. But what would you need to anyway? You can disable any of the search ranges by pressing the number keys 0-9, or you can change any of the parameters in any of the custom search ranges.

I rearranged the custom searchs that I had and when I uploaded it just added the new ones and kept the old ones as well. I ended up reinitializing the radio and started over. Some of the QK's/number keys overlapped so disabling those in this circumstance didn't work.

Is there a way to delete individual systems/groups/channels manually? I'm using ARCXT and it will allow you to delete system/group info before uploading, but not CUSTOM SEARCH's.

The scanner was "born" with 10 custom searches. They cannot be added to or deleted, but the parameters for each can be changed (frequency range, SQK, step, etc...).

If the problem is that you don't want one to be active while scanning other things, then lock it out (FUNC + L/O, L/O while on that search).

It appears that this is a software issue. When I try to overwrite with new search ranges the software doesn't delete the previous searches but just adds the new ranges to the previous ones.

That's not possible. You have 10 custom search slots. No SW can add more. They can be changed, and they can be disabled, but they cannot be added-to.

It sounds like you don't want the SW to write a new configuration to the scanner and just keep your current configuration settings. That should be an option to not overwrite your configuration.

These are CUSTOM SEARCH's. I started off with five manually programmed. I tried to overwrite five more in place of these and the result was that it didn't overwrite the first five but just added the five new ones below. I used Search slots one through five and left the remainder blank but still ended up with ten.

That's not possible. You have 10 custom search slots. No SW can add more. They can be changed, and they can be disabled, but they cannot be added-to.

It sounds like you don't want the SW to write a new configuration to the scanner and just keep your current configuration settings. That should be an option to not overwrite your configuration.

2337. Re: [BCD396XT] Custom Search Delete

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-07-12 00:27:34 UTC
From: Michael Bennett
Topic: 2323 Message: 2337

I did. His reply was

"Ok, The only problem is that I can't delete custom search ranges from
>> software so that may confuse people.
>> When you either clear the start and stop or enter zero as freq the scanner
>> simply does not accept it and keeps the previous programmed data.
>> If you find any reproducable pattern in this please let me know.

I take it from the reply that that portion of the program doesn't give you the option to clear any previous custom searches before uploading the new ones.

Sounds like you need to ask Gommert. Might be part of ARC-XT that isn't finished yet.

[Non-text portions of this message have been removed]

2338. Re: [BCD396XT] Custom Search Delete

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-07-12 00:36:08 UTC
From: mch@nb.net
Topic: 2323 Message: 2338

The problem has nothing to do with deleting searches. It has to do with the fact that you're programming slots 1-5 and the SW is loading them into slots 6-10 from what you're saying.

I have to wonder what it would do with them if you loaded the config again.

2339. Re: [BCD396XT] Custom Search Delete

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-07-12 00:51:19 UTC
From: Michael Bennett
Topic: 2323 Message: 2339

I should have said "overwrite" instead of "delete".

----- Original Message -----

Subject: Re: [BCD396XT] Custom Search Delete

The problem has nothing to do with deleting searches. It has to do with the fact that you're programming slots 1-5 and the SW is loading them into slots 6-10 from what you're saying.

I have to wonder what it would do with them if you loaded the config again.

I'm able to overwrite them with FreeScan. Give that a try.

2342. analog vs digital

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-07-12 04:20:06 UTC
From: James
Topic: 2342 Message: 2342

I currently have the BCD396T scanner and hoping to get the BCD396XT scanner for christmas and was wondering what peoples opinion was regarding the signal from a digital signal and analog signal. I noticed my 396T seems not to do very well with the analog and works better with digital. Does this seem true with the 396XT or not?

2343. Re: [BCD396XT] analog vs digital

I've heard this point made a few times (not necessarily about the XT, but in general), but it doesn't make sense that any scanner could receive a digital signal well enough to decode, but cannot receive the same signal well enough to copy in analog, as any signal strong enough to be *able* to decode the digital content should be copyable if it were in analog format.

I have to wonder if what people are really saying, or really meaning, is that the scanner receives better in Band X as opposed to Band Y which is certainly possible to be different. IOW, do people only have digital signals primarily in one band, and it's the band that has reception differences, and people are equating this to a difference between analog and digital?

There are a great many opinions on this. The most common response I get from both scannists and system users is that digital sounds better than analog "eventually" after you get used to it. From your experience I am going to guess you do not listen to a simulcast P25 digital system, these often sound poor on the Unidens.

People tend to get used to their existing radios and anything tthat sounds "different" tends to get dismissed as different, hence worse.

For myself, I will give an example of analog vs. digital: In our Comm Center we have dozens of analog channels for daily use. We also have a single digital radio on our statewide system. Every once in a while I will see a dispatcher or visitor looking around to see who else is in the room, and they will then realize it is the digital radio...

2346. External Speaker

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-07-12 13:53:02 UTC
From: tools4fire@gmail.com
Topic: 2346 Message: 2346

I'd like to add an external speaker for my BC346XT to make it more audible in my truck.

I had an older RadioShack lapel clip speaker that I tried with the unit, but the volume level is pretty poor (even w/ scanner volume topped out). This little speaker was plenty loud when used with my old RadioShack 20 channel scanner.

Suggestions for the best external speaker (or specs) for use with this unit?
Or ...
Is this amp for an external speaker a weak point in this unit.

Thanks for our comments and suggestions.

You may want to take a look at this thread:

http://forums.radioreference.com/uniden-scanners/141725-bcd396xt-audio-popping-solved.html

As you will note, I had a problem with a popping sound and found a
way to deal with it. The post refers to my 396XT, but the same thing
applies to my BC346XT.

YMMV.

Get an amplified speaker. Even a PC speaker will work. If you can find
one that runs on 12V, all the better.

2350. Re: analog vs digital

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-07-13 18:00:07 UTC
From: shelleysh1@att.net
Topic: 2342 Message: 2350

Exactly Rich!

It's simply a different "pitch" (that's almost the way to describe it). And once a user gets used to how a digital transmission sounds, as opposed to analog, they really don't think about it much. They know, without even looking at the radio, which department is transmitting. We have a simulcast P25 digital system in a county adjoining St. Louis County. It's not so much that it sounds poor on the Unidens - it is just something "that much different" from even the other digital systems - to get used to. On the 396XT it sounds a lot better than on the 396T, at least to me. Actually, virtually all of the digital systems sound better on the 396XT, and I've put the two radios side-by-side for comparison several times.

I have no doubt cities differ. There can be a number of things which can affect the transmission - on both the way the system was setup as well as how we have our radios setup and even topographics come into play. But all in all, as I said, I'm much happier monitoring the digital systems (and even analog) with the 396XT than I was with the 396T.

2351. Static while driving

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-07-13 20:44:46 UTC
From: fyrscan
Topic: 2351 Message: 2351

Even with the squelch "maxed" while driving, I must lockout at least two dozen frequencies for my 396xt to continue scanning. I've tried disconnecting my other mobile scanner, a 760XLT, which does not suffer from the same disease as the xt, & I've tried disconnecting the tri-plug DC outlet & connecting the xt directly to the cigarette outlet. I have no other electronic equipment either connected or operating at the same time as the xt, not even the vehicle's radio/CD/tape player. I drive an '03 Honda CR-V. Suggestions welcome. Thanks very much.

No other electronics operating?
That hasn't been true in cars since the 70s or so.

Is your 396 on an external antenna like your 760? If not, try that.

You're likely picking up the ECM or other electronics in the car.
The instrument cluster is another source of a ton of RF.

There is, of course, the computer that runs the car as one possible source of interference. I'd try the scanner on batteries and see if that makes a difference. If it's not coming in on the power line, even that won't necessarily help.

If the scanner is connected to an external antenna, I'd try it on the stock antenna and see if that helps.

2355. Reception Issues 396XT

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-07-15 13:19:04 UTC
From: cavitt2
Topic: 2355 Message: 2355

This is somewhat of a repost but I'm anxious for some feedback if anyone has any ideas. I used the older 396 for years and have been test-driving the 396XT for our TV station for about a month. I work in Atlanta where there are multiple digital systems.

My initial experience with the XT has been negative. I have experienced more dropped conversations, garbled traffic, and no audio than I ever remember with the older model. There are many occasions when I can see the talkgroup on the scanner -- often for five seconds or more -- but no audio comes out.

I've switched antennas and checked all the "usual suspects." The CC is OFF, WX priority is OFF, squelch is low, AGC is OFF. I am using control channel only. Signal strength on these dropped and/or garbled conversations is often three or four bars.

I am almost to the point of telling our folks to go with the older models of the 396/996 when they pull the trigger. Is there anything else I can tweak or try on the XT?

Thanks, RC
Atlanta, GA

Try running the scanner from the batteries and not plugged in. The scanner should run for 12-14 hours on one charge.

Per the manual for the BCD996T, page 73
"Note: To set the I-Call to a wildcard receive condition, press [.No] + [0]."

I use the following TG ID for my BCD996T and BCD396T
"A Wildcard ID can be entered to monitor all I-Calls in Scan mode. See Page
72 & 73 of the manual.
For Motorola systems the Wildcard ID is 70000.
For EDACS systems the Wildcard ID is i00000."

Are these the same for the BCD396XT ?

Program a talkgroup with?? .0?? I believe that gives you the wildcard.

I don't have the manual with me but, I am sure you program (.) in your scanlist
and that may keep your I call going. Uniden doesn't call it wildcard though.
That's GRE lingo. I'm not at home to pull up the manual. Sorry.

?
So in Scan mode it will automatically receive the Wildcard I-Call ?
I don't want be in Search mode.

If you are programming manually, set up a channel and enter the TGID
as [./NO] [0] which will display as i0. When you go in and check the
TGID for that channel it will read i00000 or i00000000 depending on
the type of system.

If you are programming with FreeScan, you can set up a channel and enter i0.

Thanks Richard,
I was making it more difficult than it really is.
I see the XT uses i00000 for both Motorola and ECACS. Motorola for the 996T and 396T used 70000.

All you need to do is input (by hand or by scanner program) ".0" for decimal on P25, Motorola, and EDACS or "." if you use the HEX talkgroup/I-Call display. The XT will display the correct amount of zeros in memory. In ID Scan the wildcard is needed, in ID Search it is NOT needed, the XT will display all I-Calls, Talkgroups, and Patches.

You can use Fire Tone-Out mode which will not open the receiver until
after the tones are decoded. I'm assuming your message got cut off or
you meant 'before they transmit the announcement', as the alert tones
are sent after they transmit.

> I currently have the BCD396T scanner and hoping to get the BCD396XT scanner for christmas and was wondering what peoples opinion was regarding the signal from a digital signal and analog signal. I noticed my 396T seems not to do very well with the analog and works better with digital. Does this seem true with the 396XT or not?
>

Digital signals are easier to filter and manipulate. Easier to eliminate unwanted sounds. Also it could be they had different engineers working on the analog portion vs. the digital portion. Often development is split into different parts and not always operated on by people of equal skill.

2375. BCD396XT worth it?

Hello, I am new to scanning, and new to this group. I recently purchased a BC346XT. This turns out to be next to useless in Michigan where practically the whole state has gone digital. So it took me a while to get enough courage to spend $250, now I am really questioning if I should double up and go $500 for something digital.

I have been reading all the info I can find. Does it take a lot of time to enjoy listening to your scanner? About how much dedication does it take? I have enough hobbies with biking and computer games, and raising my son that I don't really need another one. I really only intend to use it while I am travelling, or riding my bike, or skiing, etc. Places where I may have nothing better to do since I don't really listen to the radio.

$500 seems steep for a casual user like myself. But it seems that with scanning its all or none. They don't have a low line cheap digital scanner. Not even cheap knock-offs...

All depends if $250 is worth it to you to monitor P25 digital signals.

Nobody can really answer that except for you.

But the sensitivity within any given band will be the same, and if a signal is strong enough to decode digital, it's strong enough to understand analog.

CL,

There are other choices there is a BCD396T made before the XT which can be found used for around $350.00. There is also the Radio Shack line the Pro-96 can be found for $300.00 and under or the Pro-106 RadioShack's newest digital handheld which has been on sale a couple of times for $399.99 NEW.

Check out the classified site on Radioreference.com. Before you buy from there check sellers feed back and be carful about buying used from members that have only posted on the sit a few times.

Good luck and Happy scanning!

73

Mike

Subject: [BCD396XT] BCD396XT worth it?

Hello, I am new to scanning, and new to this group. I recently purchased a BC346XT. This turns out to be next to useless in Michigan where practically the whole state has gone digital. So it took me a while to get enough courage to spend $250, now I am really questioning if I should double up and go $500 for something digital.

I have been reading all the info I can find. Does it take a lot of time to enjoy listening to your scanner? About how much dedication does it take? I have enough hobbies with biking and computer games, and raising my son that I don't really need another one. I really only intend to use it while I am travelling, or riding my bike, or skiing, etc. Places where I may have nothing better to do since I don't really listen to the radio.

$500 seems steep for a casual user like myself. But it seems that with scanning its all or none. They don't have a low line cheap digital scanner. Not even cheap knock-offs...

Unless you find one being resold used the price is going to be around $500. Using this type of radio the only way to hear MPSCS Michigan, Illinois StarCom21, Indiana SAFE-T statewide systems.

Is it worth it? To me it is, but that's up to you. If you will be using it enough to justify the cost you'll really enjoy it.

Thanks. I did not know about the classified site. I am going to return my current scanner, but I am taking it on a trip with me first. Maybe I will hear some other interesting things.

Last night I found the instructions to one of Unidens other scanners which corresponded nicely to the one I have. Those web instructions are horrible, but the ones they used to have were great. It certainly got me more knowledge about what I was doing that I had before.

I have listened to the scanner every free moment since I bought it. But of course I can only imagine whats going on out there since this is a big city but its digital. I only need a nudge to help me take the plunge. I know this is an awkward place to ask since everyone here probably already loves this stuff...

Hello everyone,

Received my 396xt yesterday and tried to follow these instructions from the mannual: "To turn a preloaded system on or off, press SCAN, then press ./no then the two-digit System Quick Key."

By default the display has "Alaska"--would like to change/load the preload for Rhode Island. When I press scan then then '39' for Rhode Island does not change.

Must be something simple (I hope), but when everything is new--oh well!

Thanks you for your help and info.

John

And I'm assuming he will WANT to turn OFF Alaska. The quickkeys are a "toggle" type of thing...where you need to do it once to turn it off if it's on etc.

Hi,

Thanks for the help.

Whien I just enter [./no] + 39 for RI, I get the message "direct entry" i39. Press 'yes' and then "Quick TGID Save?"-press 'no' and then "Select System".

I find RHODE ISLAND and press 'yes'--then message 'TGID Exists Accept (y,n).

Does not seem correct--suggestions.

Is the 396XT worth it...
In a word, yes. I know spending $500 these days is tough for a lot of us, but if you're really into scanning, you gotta have an XT. I'm on my second one (the first somehow got lost on a road trip with the grandkids.... still love them, though.) It's a GREAT radio.

You are probably getting that result because it is in HOLD mode when
you are pressing the buttons. Put it in SCAN first by pressing SCAN
and then press the [./NO] 39.

CL,
  There's an easy way to decide - When an Emergency Vehicle goes speeding by or you hear sirens at night are you curious to know what's going on? If the answer is YES go for it. I personally took the plunge even though my area is mostly analog except for a couple of cities/towns near me. I am personally prefer the 396XT but also have the GRE PSR 500 (same radio as the Radio Shack Pro 106). From my experience - if you live in a big city go for the 396XT since it isn't prone to interference like the RS/GRE model otherwise either is a good choice.

PS Here's a couple of good online stores if you decide to go new
www.grove-ent.com
www.scannermaster.com
www.universal-radio.com

Jeff

If you want to go new here are some reliable online places to buy:
www.grove-ent.com
www.scannermaster.com
www.universal-radio.com (Great selection but site sometimes doesn't have correct status on the item so definitely call first)

NOTE if you decide to go for it you will discover that the local police blotter leaves out lots of stuff.

But isn't he asking for the file to be placed in the "Files" of this Yahoo
Group ?
Which it already is. Does Yahoo prohibit downloading of files to Poland ?
When he states "webiste freescan.org", I think he means www.scannow.org.

I believe that when he asked, it wasn't in the Yahoo Files area, but
it now is. The file shows that it was added today.

My understanding is that he can't download from the www.scannow.org
site because he's in Poland.

I emailed him a copy of the file directly so he's set either way.

Thank You for all people from group.
I got it Freescan and also see on folder files on group.

p.s
we can not open website www.scannow.org from poland becouse the IP,s are blocked (too much spamers from my country) the website is bloked also for me(we have dynamic range of IP adres,every 24h IP's change) ,but allready have freescan from Dick and also is on group.
Thank you

2403. Rebanding Question

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-07-18 23:53:25 UTC
From: SRehm24416@aol.com
Topic: 2403 Message: 2403

With the ongoing and what seems like increased speed of the Illinois StarCom 21 system rebanding?these days I was wondering if the pre programmed StarCom system in the 396XT will be easy to update? Is the system programmed in "site order" ie; 1, 2,?thru 359?etc or is it completely random? As each system is rebanded I would like to find the site related to the reband and update it. But I am not sure if there is a way to check it. I have my own system set up for my area but when traveling it is pretty easy to just hit the complete state system and search. Anyone with any ideas?

thanks jeff

On my 396XT in the preprogrammed SQK-28-ILLINOIS Starcom System there are 78 Sites programmed with at random towers.....I have numbered each "site" and gone thru each one labeling what towers they belong...Those new buyers of these scanners will have to go thru what i did and reband each 800 freqy dropping them by 15mgz as they occur....We have already had about 20 towers rebanded so alot of work ahead to hear any transmissions....

That will happen with all rebanded systems.
Unless Radio Reference has the updated freqs then you can download them.

The pre-programmed freqs in the radio are just to get people started.
What did you want them to program future freqs?

From: rehmj@sbcglobal.net
Topic: 2410 Message: 2410

In reguards to the IL StarCom system it has approx 148 sites. The pre programmed system for the XT has around 76. In the XT some sites have 2 freqs and others have 20 or so.

I have checked the first three sites in the XT and the last three sites and there is absolutely no orginization what so ever in relationship to the posted information for the sites on the StarCom web site or RR.

Anyone have an idea if this is correct?

You need to ask that on the StarCom 21 or Carma Yahoo group.

The CARMA website has updated its information on this system in the last few days. I think you'll find that information to be the most up to date that you are likely to find. There are also downloadable files available in a couple of different formats that may save you considerable button pushing or typing.

Hi all!

By mistake I have checked 'Private' checkbox in ProScan. And now I can't see/edit all my trunking systems - XT says me: 'Protected System Access Not Allowed Press Any Key'. ProScan also do not show systems data - Default names, zeros in frequencies, empty list of TG & etc.

How to unprotect these systems?

I tried to send these commands:

PRG
SIN, SYSTEM_NAME, PROTECT 0, [\r]

But get ERR message.

What's wrong?

Please help!

Private systems cannot be edited or viewed in the scanner nor can they be read out of the scanner using any software. You'll need to edit the system in ProScan to make any changes, then write it back to the scanner (maybe leave that setting off...).

Private is private. :|

It's pity.

ProScan and your '[un]complete reference' / Wiki issues have no any warnings about this risky feature. I spent about ~5 hours for restoring 6 different trunking systems. It have been manual process, because I never make backups of ProScan databases.

Please update your papers to keep users informed.

Thank you.

Anyone using a computer should always know to make backups.
If you got a new car I hope you would make backup keys for it. If it is important back it up. I am paranoid and back up the backup.

It is documented in the printable PDF "The Complete Reference". There are no user controls for it, so it isn't really something to otherwise document outside of PC software (the only way to make a system private is to write it to the scanner as private).

2420. New to Uniden !

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-07-23 23:17:47 UTC
From: craig0h
Topic: 2420 Message: 2420

Hello to all, I will try to make this short.. I am new to the group, I just ordered my 396XT from Scanner Masters via 2nd day air. It will be here tomorrow !!!! I am so very excited !!

I have owned many scanners in the past, and my current radios are,,, the pro2005, My favorite the IC-R20 my XTS3000 stopped working 3 months ago L (Needs to be reprogrammed or flashed), And my three Icom 450-512 Two ways..

This is my first Trunking scanner and my first Uniden, I am pretty good at integrating myself to new radios I got the hang of my R-20 in about 2 days.. I was just hoping for any pointers or advise anyone might have for a fist time Trunking scanner owner. As I will be the first to say "I don't know everything"
Like what is LTR? And what id SMR?? Etc.. I know about network ID'S ,DTMF.. Stuff..

I guess I am wondering if there is any "Odd ball" stuff I should know about right off the bat.

I would like to thank anyone ahead of time for any help on my new adventure ahead of time! Thanks

Craig Harper,
Norwalk CA.

(And I thought I would know everything by the time I was 28 :)

O..
BTW: I am in Southern California area just outside of LA. ,, I know I should have had a BCD396T a long time ago!
However my XTS3000 was getting me by.. And I have re-signed up for a premium account at Radio Reference and downloaded the 396XT's PDF.. I will be reading up on stuff tonight.

Thanks again for any advice,
Craig H

If my city is not in the "Preloaded" deal. And I don't plan on going to any of the city's. Should I delete / can I delete them, Or should I just leave them alone?

Craig,

In other words, it sounds like it's a failure of the SW programmer to
put enough the emphasis of the consequences, as SW is the only way to
set that option.

Threaded...

craig0h wrote:
> Like what is LTR?

Logic Trunked Radio. It's a trunking scheme used mostly in the business bands. The trunking is done in the radio, so there is no control channel being broadcast continuously as there is with EDACS/Motorola/P25.

> And what id SMR??

Specialized Mobile Radio. Basically Land Mobile business trunking - such as NexTel, LTR, EDACS, Etc.

> I guess I am wondering if there is any "Odd ball" stuff I should know about right off the bat.

For public safety, most systems will be conventional (I'm sure you know what that means), Motorola trunked, or P25 trunked. Make sure you use a reference source such as www.radioreference.com to see which type of system you're dealing with, as programming the wrong system type means the scanner won't work on it. If you know, fine, but it's usually good to double-check.

One other important note: Just because a system uses P25 audio channels does not make it a P25 system. Some systems are Motorola Type II and use P25 voice channels. Program these system types as Motorola Type II.

Dump them - you can always reload them individually via software.

Although with the XT it's much less likely they will use all your
memory, but you may want to use the SQKs (System Quick Keys) that are
being used by the PreProg Systems.

Download software in order to program the scanner (Freescan, ARC-XT etc) as it is a pain to manually program. I gave up after doing my local non trunked systems. Also the software will give you a better idea of how the Uniden DMA memory is setup on the scanner. I have the 396XT and it is a big adjustment from ICOM radios programming wise I used to have an ICOM R-10,.

Take

Hello to all, I will try to make this short.. I am new to the group, I just ordered my 396XT from Scanner Masters via 2nd day air. It will be here tomorrow !!!! I am so very excited !!

I have owned many scanners in the past, and my current radios are,,, the pro2005, My favorite the IC-R20 my XTS3000 stopped working 3 months ago L (Needs to be reprogrammed or flashed), And my three Icom 450-512 Two ways..

This is my first Trunking scanner and my first Uniden, I am pretty good at integrating myself to new radios I got the hang of my R-20 in about 2 days... I was just hoping for any pointers or advise anyone might have for a fist time Trunking scanner owner. As I will be the first to say "I don't know everything"
Like what is LTR? And what id SMR?? Etc.. I know about network ID'S ,DTMF.. Stuff..

I guess I am wondering if there is any "Odd ball" stuff I should know about right off the bat.

I would like to thank anyone ahead of time for any help on my new adventure ahead of time!
Thanks

Craig Harper,
Norwalk CA.

Another note: If you have one 'stock', read it with SW first so you have those preprog files in your PC. That way you won't have to DL them from the web.

From: Tim
Topic: 2432 Message: 2432

I've just purchased the 396XT which brings me into the 21st Century from my previous scanner (AOR8000), i've had a play with the close call features and now i'm a bit confused, it appears that in close call auto i can hit the scan button, scan starts but close call will run in the backround? I've also got a close call system that has been gradually filling up and "close call hits" flashes on the screen as well.
the user manual that came with the radio isn't that user friendly so can anyone suggest another alternative manual i can read and get my hear around?

Hi everyone,

I've got the my XT scanning and occasionally I pick up a trunked system up in the 856MHz area. The problem I'm having is that I can't seem to figure out the system. I can't find it online. The XT does decode it as P25 voice and I even get a NAC of 3F3 and it occasionally flashes LNK. So, how do I go about figuring this system out and then programming the scanner so it can follow along?

Try FreeScan and the trial versions of ProScan and Butel and you can see which you prefer. You may find that each has its attractions and that you use one for a particular function and a different one for something else.

If you know Butel, you will likely acclimate to it much faster. There
are other less expensive solutions out there you might want to try, so
try the demos of them all and see which one you like best.

Some others are: FreeScan and ProScan.

First of all Federal systems are not in the 856 range. So you are not picking up a NAC code.
If you set a custom search range that covers the freq you are talking about (make sure you set it up as CC Only)
If it is a Local or State Government system that is in the database of the scanner it will tell you the name of the system.

To put it in your scanner so you can hear what's on the system just create a new system. Now put that freq in and set the system to CC Only Mode. Make sure the system is set for SEARCH.
You're in business. Or you could just listen to everything on the system using the Custom Search Mode from above.

Is it possible that 3F3 is the system you are seeing.
If it is a Nextel system or a EDACS digital system you will see the talkgroups but not hear anything.

Subject: [BCD396XT] Figuring out a trunked system

Hi everyone,

I've got the my XT scanning and occasionally I pick up a trunked system up in the 856MHz area. The problem I'm having is that I can't seem to figure out the system. I can't find it online. The XT does decode it as P25 voice and I even get a NAC of 3F3 and it occasionally flashes LNK. So, how do I go about figuring this system out and then programming the scanner so it can follow along?

Say what? Federal systems vs non-federal and NACs have no relationship
to each other.

He Found the answer to his question on the RR forum.
It turned out to be the Orange County(California) trunked system.

Um.....not true. A P25 trunked system uses NAC's the same way a Smartnet/Smartzone (or PP actually) uses a connect tone. All channels within a P25 trunked system transmit a NAC and require the correct NAC to keep the voice channel keyed.

Trunking frequencies that are digital also have NAC codes.

Just for clarity, ALL P25 uses NAC codes - conventional AND trunking.

In fact, both conventional AND trunking even use talkgroup IDs!

You have to have both the NAC and the correct TGID in a P25 radio
(scanners excluded) to hear a transmission.

Hello,

Problem programming the following into my 396xt. New to scanning, have had the scanner one week, did program a digial system (motorola p-25) successfully. So far have been enjoying!

This is listed in the "Scanner Master" 11th Edition as follows for a department of corrections facility in my area (RI).

Cranston Trunk (LTR):
I started by creating a ltr system and one site with the following frequencies and LCN:
851.3500 1
851.3875 2
851.8875 3
852.8125 4
852.8375 5
853.0625 6
853.1000 7
853.5875 8
853.7875 9
853.8375 10
I checked my frequencies and LCNs with some one using a different scanner and he told me they are correct. His system works fine!

Then I created one Group with the following:

Talkgroups
001050 Admission
003060 Female Facility
005070 Operations

I am very close to this department of corrections facility□never hear any activity. My friend says he hears activity all the time all the time with his rs scanner--we are neighbors, and both use the rs 800mhz rubber duck. I am using ARC XT Pro to program.

Any ideas what I might be doing incorrectly?

Thanks and 73 de John

I have never programmed an LTR system, so I can't give much in the way of specifics. My first suggestion would be to make sure you are in ID Search rather than ID Scan. That way if you have the right frequencies, but the wrong talkgroups, you will at least hear something. It will also confirm that the frequencies are right. Might also want to try listening to the channels programmed into a conventional system. That way you can confirm that there is activity on those frequencies.

I looked up that system on RadioReference.com and there is very little info. They only list a couple channels with different frequencies, but list it as Cranston 2 with a note that Cranston 1 was shut down about a year ago.

Hopefully someone else will come up with something better.

You might want to scan that system in ID Search mode for a while to get the correct IDs. The format you used below isn't what LTR TGID's look like.

2452. LTR scan speed

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-07-27 22:39:39 UTC
From: Dave Fischer
Topic: 2452 Message: 2452

I have a question about scanning LTR systems:

I'm curious as to why the unit sits on each LTR system for a "relatively" long time (a full second or so), even though there's no carrier present on any of the LCNs. With Motorola systems, if the control channel isn't present, the unit flies right by it.

The hold time is set to zero on the systems, and they're relatively small (only 2 or 3 LCNs each).

It seems logical to me that the scanner should be able to quickly sample the LCNs (at conventional channel scanning speed) and simply keep going if there's no carrier present. I'm assuming that there's a technical explanation for this.

-Dave

You have to consider how scanners scan each system type. For Motorola, it only has to scan one control channel, and if that is lost it will only have to scan up to four control channels for activity.

To scan LTR, the scanner has to look for activity on every LTR channel in the system. That's just the way LTR works - there is no control channel (or every channel is a control channel - depending on how you want to define the term). Absence of activity does not indicate that the system is out of range as it does with a Motorola system.

The data rate on LTR is also much slower, so more time must be spent when there is activity in order to decode the data.

That said, I think LTR systems could be scanned a little faster than they are, but never as fast as a Motorola system that is out of range.

I've also wondered why LTR systems have such a long dwell time on Uniden scanners. If there is no carrier present, they shouldn't take any/much longer than conventional channels. If there is a carrier, I can see a slight dwell to check and see if it is an LTR signal, and then decode. The GRE scanners do fly through with no perceivable dwell in the absence of a carrier, but obviously Uniden does things differently. Not a biggie, but with several LTR systems, it does drag the overall speed down a bit.

Clayton

The hold time is set to zero on the systems, and they're relatively small (only 2 or 3 LCNs each).

It seems logical to me that the scanner should be able to quickly sample the LCNs (at conventional channel scanning speed) and simply keep going if there's no carrier present. I'm assuming that there's a technical explanation for this.

-Dave

When you have close call or the weather priority on it has to go check those and that is what you are hearing. It you go into the menu and shut those off that will solve the problem.

I would recommend you download the PDF manual for the 396XT for quick reference. It was on Unidens site under customer support but I don't have the link available. To keep your sanity you should get software to program the scanner if you have alot of trunked systems in your area.

Some good ones all have trial versions

Freescan (free)
Proscan   (30 day trial I believe) Be sure to get the upgrade download along with v 2.1
ARC-XT   (30 day trial I believe)

2459. Re: Programming LTR system

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-07-29 00:52:44 UTC
From: shelleysh1@att.net
Topic: 2448 Message: 2459

Hi John,
In visiting Radio Reference's site on the web just now (www.radioreference.com), I went into the listing for the Department of Corrections for Rhode Island. The latest update for the LTR system was almost a year ago and it was to delete one of the two control channels for the Cranston location. The single control channel listed now for Cranston is: 856.31250. Also, they noted that there are no talkgroups listed for the Cranston location. So, instead of putting in any talkgroups, you will need to take Paul's (UPMAN) advice and others' and set your radio to search talkgroups instead of scan. That way you'll be able to pick them up and then add them as they're captured.
I would also recommend, if you haven't picked up a program yet, starting with FreeScan. It's a great program to use to both program your radio and also learn how to use the radio! If you like it, please consider sending a donation to Assaf (the author of FreeScan) - he's not only written a super program, he's also continually updating it! There are also other programs you can take a look at - ProScan and ARC-XT, both of which you have to pay for but both give you a good trial period to evaluate their programs. I own and use all three mentioned (for different reasons and purposes) and can recommend all of them as well.
Anyway, give the single control channel a try and search on the talkgroups. I hope that helps and let us know!
Shell

Hi,

Hello and thanks to all of you for your help. Yes, I did a search on the TGID and that did the trick! Also, this forced me to learn a new technique--great!

Enjoying this so much, might purchase the 996xt for the shack and out side antenna for 800 mhz. Would like to keep it off the house, but I know signal strenth would suffer--oh well.

Thinking of joining RR and using the auto download/import for my arc xt pro--what do you think?

Thanks again.
John

You will likely get a good answer here, but this really is a question
that is better asked on the BC246T list.
<http://groups.yahoo.com/group/BC246T/>

I don't know what size they are offhand.

Great John!
Personally, I highly recommend subscribing to Radio Reference. It makes the "auto download" into your software extremely easy. I know many here, as well as myself, have used it for years. The subscription is reasonable, considering all they have to offer there, and, if you find you don't use it much, just don't renew after a year. Personally, I've been a subscriber since 2005 and use it extensively.

By the way, sorry I didn't read your first post as closely as I should have and missed that you were already using ARC-XT. I wouldn't have added all the software choices at the end of my post! (Oh duh Shell! LOL)

Glad to hear you're enjoying the radio!

Shell

That's because it is not a file for you to open and look at.
It is a file that is used by a program.
You save the file on your computer then open it from within its appropriate program.

And to me also. Sorry about that...will take a look and see what needs to be done.

Jan (and interested others),

That's the answer (You have to DOWNLOAD the file and THEN open it) but it preplexes me as to "why"? Other pdf type files can just be clicked on. I have just tried generating the file using a different "pdf maker" with the same results - ie garbage.

So that leaves me unsure as to how to "Fix" this (without spending a ton of money on Adobe products <g>).

These are not PDF files. If you have a PDF reader and you double click on a PDF file your computer automatically opens the file with your PDF reader. (Probably Adobe)

Files that end in the mem folder are for Butel software.
Files in the folder USAD are Uniden Software files.
The USAD files can be opened with any of the USAD software currently out there. If you open a file created for the 396T with the BC246 software you have to open each file and save it because they are stored in different formats. So if you download it and use it before it is opened then saved you will get an error.

Remember Uniden's software for the xt model scanners is not out yet.
You will import the files on the internet into FreeScan or Butel's software. The import in under the FILES section of the menu.

2476. Digital PL/CTCSS tones?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-08-02 11:35:17 UTC
From: kb1gcb
Topic: 2476 Message: 2476

Hello,

I have a local repeater 158.9475 (fire) which specifies a tone D-306. The "D" represents a digital tone ("Scanner Master, 11th edition). I use arc xt pro to enter the channel and tones-are the digital tones different? If so how do you enter them?

Thanks,
John

Strange I never received email notifications about any of the posts to this thread.

Thank you all for replying, much more valuable information than I had anticipated. I did find the answer over at RadioReference. I had bee looking through the Los Angeles listings and couldn't find the frequency. It didn't occur to me I was high enough and close enough to hear Orange County so I never looked at the rest of the California listings.

2478. Looking for comprehensive reviews and reports

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-08-02 13:12:10 UTC
From: Steve Matzura
Topic: 2478 Message: 2478

I've been a 996t and 396t owner for ... well, let's just say since Version 1 of the firmware and leave it at that ... and I've heard great things about the GRE/RS models, but in all this time I've yet to see a comprehensive compare-and-contrast-type review betwixt and between them. Now we have the XT radios to contend with, and what new features and characteristics they bring to the mix, and still no long-and-drawn-out reviews. Do they not exist? Am I just reading the wrong magazines? I don't want to have to log onto RR, for example, and piece something together by reading half a hundred public postings from half a hundred different people with different antennae and interpretive skills for writing this kind of document; I'm looking for the good, old-fashioned put-it-on-the-bench-and-test it then put-it-on-an-antenna-and-listen-to-it kind of review. Any recommendations greatfully received.

Hi all!

How to toggle Channel Alpha Tag / Frequency or TGID?

This function have been on "FUNC + 5" on BCD996T, BR330T & others.

But how to find out frequency in 1-2 key presses on BCD996XT?

2480. Re: New file uploaded to BCD396XT

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-08-02 19:04:47 UTC
From: tomvanderpool
Topic: 2468 Message: 2480

He was replying to a message about the file *I* had recently uploaded which IS a pdf but does NOT open when just downloaded. It appears to be version 1.4 (also tried a version 1.5) that operates this way. Mark's pdf just above it (version 1.6 I think) seems to operate as you would expect. I have no explanation and have tried a couple variations with the "pdf builders" I have at my disposal. No success.

So, until I find a cure, "please download and open" is the answer I have for now. It does seem to work in that manner, although I would like to find a "better way".

In the software program, double click in the PL/DPL column, see down arrow,
scroll down until you see
the desired tone.

From reading the postings on RR, I get the impression that it is no longer merely a matter of putting it on the bench and determining the specs. It appears that one radio may be better in one environment and another be better for some other. I think the best bet may be to get on RR and check in the state forums for someone in your area that listens to what you want to listen to. That may give you better info than the old fashioned review that you seek.

An example is the latest firmware upgrade for the 396T. Some people say that it solved their problems and others are looking to go back to the previous firmware because they feel that things have gotten worse for them rather than better. The difference appears to relate to the types of systems and, in some cases, the specific systems that they listen to.

When you go to enter the tone the software will list the PL tones first followed by the DPL tones. Make sure you use the DPL tones. Just scroll down.

Take Richards advice and read the radio reference posts for your area.
I have both radios now because I didn't check RR. I live in Broward County Florida (FT Lauderdale Area). I am not a radio expert so the below is from ny personal experience using borth.

I find that the GRE500 aka RS model Pro ??? overloads easier, it seems to have more sensitivity so on the plus side picks up more.

 I have used both scanners off of a Grove Enterprises ANT05 mounted to a wall in a condo (no outdoor antennas allowed) and with the RS 800 MHZ rubber duckie scanner antenna.

I won't comment on audio quality since everybody's taste is different but my taste leans towards the 396XT.

Also since all I listen to is Public Safety which is 99% on trunked systems down here, I really have no idea how either of these scanners perfrom outside of the 800Mhz freq range, Hopefully soon I'll get some maritime and air frequencies programmed.

I have both scanners running almost 24/7 and both are programmed exactly the same so I will switch which one scans my local hometown stuff and which one scans everything.

This is exactly the thing I'm discovering as I dig deeper into this, and your following paragraph gives me pause as well.

>An example is the latest firmware upgrade for the 396T. Some people
>say that it solved their problems and others are looking to go back
>to the previous firmware because they feel that things have gotten
>worse for them rather than better. The difference appears to relate

>they listen to.

Indeed, and that really puts the fear o' God in me for the same reason, especially since I'm also hearing that going back isn't necessarily an option. I guess that's what happens with this digital stuff, the decoding algorithms change to try and improve efficiency, and sometimes they break it and sometimes they fix it. And then there's the question of if it ain't broke don't fix it, or if it ain't broke expect an improvement.

I like your advice, though, I'll try and find folks in the New York City area and pay particular attention to what they have to say.

Jan (and interested others),

That's the answer (You have to DOWNLOAD the file and THEN open it) but it preplexes me as to "why"? Other pdf type files can just be clicked on. I have just tried generating the file using a different "pdf maker" with the same results - ie garbage.

So that leaves me unsure as to how to "Fix" this (without spending a ton of money on Adobe products <g>).

The file has a PDF extension, however it's associated as HTML, so most browsers want to display it as HTML unless you download it to your local drive and then open it.

2494. P25 Tracking

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-08-03 13:14:40 UTC
From: SRehm24416@aol.com
Topic: 2494 Message: 2494

I was wondering if anyone else has had this problem?

Went to bed last night with my local PS's P25 system working perfectly. The scanner was left on all night. (Note. The system does not change control channels at midnight)

Woke up this morning and nothing was heard on the P25 system but all analog non trunked radio traffic in other systems was loud and clear. Don't know if other trunked systems were non funtioning.

Double checked all settings and all was OK. I manually scrolled through the control channel freq and alternates and the scanner stopped and hit on the control channel just fine. When I started scrolling through the TGID's the signal strength bar(s) started flashing like a late night stop light and no reception was heard.

I decided to just turn the scanner off for a few seconds and turn it back on. When I did everything was perfect again and all was good.

Are there any ideas from the Uniden Guru's that might know what happened?

Thank you in advance.

jeff

From: kb1gcb
Topic: 2476 Message: 2495

Thanks for answering my question. Yes, I know how to enter the standard pl/ctcss tones. What I am questioning is that this particular tone is differentiated by the "D"--defined as digital not the standard. It's the "D" designation that I am questioning. I do know how to enter the "non digital" tones.

Not sure if I am making myself clear, but thanks again for your help.

CTCSS = Analog PL tones
DCS (DPL) = Digital PL tones
D-305 = DCS 305

Try ... www.eham.net

On the left side of the?main page click on reviews. There may be reviews for each scanner you are asking about.

Hope it works.

Subject: Re: [BCD396XT] Looking for comprehensive reviews and reports

Take Richards advice and read the radio reference posts for your area.?
I have both radios now?because I didn't check RR. I live in Broward County Florida (FT Lauderdale Area).? I am not a radio expert so the below is from ny personal experience using borth.
?
I find that the GRE500 aka RS model Pro ????overloads easier, it?seems to have more sensitivity?so on the plus side picks up more.
?
?I have used both scanners?off of a Grove Enterprises ANT05 mounted to a wall in a condo (no outdoor antennas allowed) and with the RS 800 MHZ rubber duckie scanner antenna.?
?
I won't comment on audio quality since?everybody's taste is?different but my?taste leans towards the 396XT.?
?
Also since all I listen to is Public Safety which is 99% on trunked systems down here, I really have no idea how either of these scanners perfrom outside of the 800Mhz freq range,??Hopefully soon I'll get some maritime and air frequencies programmed.
?
I have both scanners running almost 24/7 and both are programmed exactly the same so I will switch?which one scans my local hometown?stuff and which one scans everything.?

?

From reading the postings on RR, I get the impression that it is no longer merely a matter of putting it on the bench and determining the specs. It appears that one radio may be better in one environment and another be better for some other. I think the best bet may be to get on RR and check in the state forums for someone in your area that listens to what you want to listen to. That may give you better info than the old fashioned review that you seek.

An example is the latest firmware upgrade for the 396T. Some people say that it solved their problems and others are looking to go back to the previous firmware because they feel that things have gotten
w
orse for them rather than better. The difference appears to relate to the types of systems and, in some cases, the specific systems that they listen to.

Are you on the latest version of your BuTel software? There was a change to the RR interface requiring everyone to upgrade to continue using the RR premium service. Following is from the BuTel website:

RadioReference Webservice changes:

On July 31st 2009 the webservice will change to a new interface and requires all ARC program that use the webservice to be updated.

It's my understanding from reading many threads on RR that a new version of scanner software was needed due to the change in "data format" that RR instituted about a year ago. For quite some time RR ran both "formats". They granted one extension of 30 days for software developers that didn't have their new software ready despite the long advance notice. They've now turned off the old "data format". ProScan and FreeScan have been using the new "format" for some time.

Apparently, Butel recently issued new versions of their software to deal with this, but some of it doesn't work properly. He is on vacation until later this month. From the postings, lots of unhappy people are awaiting his return.

I put data format in quotation marks because this may not be a technically correct description of the change, but I think it expresses the concept well enough.

Depends how often you use it.

If you use it often, I would use the highest capacity name brand cells
you can find.

If you don't use it often, go with the low-discharge cells such as the
Eneloop cells from Sanyo. The capacity won't be as high, but if your use
is rare the odds are the charge remaining will be higher than non-LD cells.

For the charger I like the MAHA brand. Make sure you get a charger that
charges each cell individually - not in pairs.

I believe that 1.07.00 is the latest firmware for the 396XT.

I've been all over their website... Where do you find the Firmware upgrades? I couldn't find anything in the MyUniden site.

That's because there is no V3 for the BCD396XT. (or even a V2)

Thanks for the information gang. I had trouble with FreeScan telling me that I had to have V3 for the 396XT but then it loaded the rebanded frequencies just fine. Oh well!

2519. Disabling all Start-Up keys

You can't "disable all start-Up keys".

With respect to Systems without a Start-Up key assigned, they are not
affected whatsoever by Start-Up keys. You enable them via:

1. Enabling the System Quick Key assigned to that System, or

2. Unlocking that System if no SQK is assigned.

To disable all start up keys don't use them whe you turn the scanner on. When you turn the scanner on without selecting a startup key it is the same having them disabled. If you don't use the start up keys don't assign any system to them. There is no other way.

Actually, when you start it up without pressing a Start-up Key, it retains the setting the scanner was in when you powered it down - including any Start-Up keys that were previously activated (unless you specifically disabled those systems after using the Start-Up key.

The only time the Start-Up Key is affected is when you press a different one. (again, aside from manual System manipulation)

If you would want to disable all Systems assigned to a Start-Up Key, you could simply have a Start-Up Key with no Systems assigned to it. That way, when you use it any systems assigned to any other Start-Up Key will be locked out, and all you will have active are Systems with no Start-Up Key assigned. This is different that what he asked, but is related.

That doesn't seem to be the way it's working for me. I just can't wrap my mind around the concept of System Start-Up Keys.

If I have start-up key 1, for example, that will enable (Quick Key) systems 7, 8, and 9, and nothing else, than that's good. But if I try to enable system Quick Key 1, it will not allow me to do so. I can see the system quick key icon number 1 changing from the number 1 to an asterisk and back again, but it won't scan it.

If I lock out systems 7, 8, and 9, I will get the "Nothing to Scan" message. If I press another System Quick Key, it still will not scan it, even though the system quick number changes to its assigned number from the asterisk, and back again as I toggle it. I have not locked out any other systems, yet they won't scan, only the ones assigned to that Start-Up Key will work.

What am I missing here?

Startup keys do not affect System Quick Keys. They are independent. Startup keys lock or unlock systems based on what button you are holding down when you apply power. If you hold down 1 while powering on, all systems assigned to startup key 1 will be unlocked, all systems assigned to any other startup key will be locked out, and systems with no startup key assigned will not be affected.

System / Site Quick Keys do not affect a systems lockout status. To be scanned, a system' SQK must be enabled and it must be unlocked (two different things). It sounds like they system you have assigned to SQK 1 is locked out.

2525. Help with Programming Moto Type II UHF Trunked mixed analog/digtal system

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-08-07 13:47:00 UTC
From: Bobby Ray Ransom
Topic: 2525 Message: 2525

The old 396 was easy...select UHF 400Mhz trunked, program and listen. I have tried programming the O Hare and Midway Airport UHF trunked systems in the XT and it scans/searches but doesn't stop on active talkgroups. I tried programming again. Aside from base, offset, etc., there is a 'enter lo' and 'enter hi' frequency section. Is that where I am going wrong?.... I thought that was only for rebanded stuff?....
Maybe I am not reading the manual correctly, but how do I program those UHF trunked systems....No, they are not P25 systems.

Thanks in advance

It is for UHF systems, too. See:
http://info.uniden.com/twiki/bin/view/UnidenMan4/Calculatingupperbasefrequencies

(The spreadsheet on that page will calculate the upper base frequencies for you.)
